

Griswold Public Water Supply Contaminant Inventory and Ranking

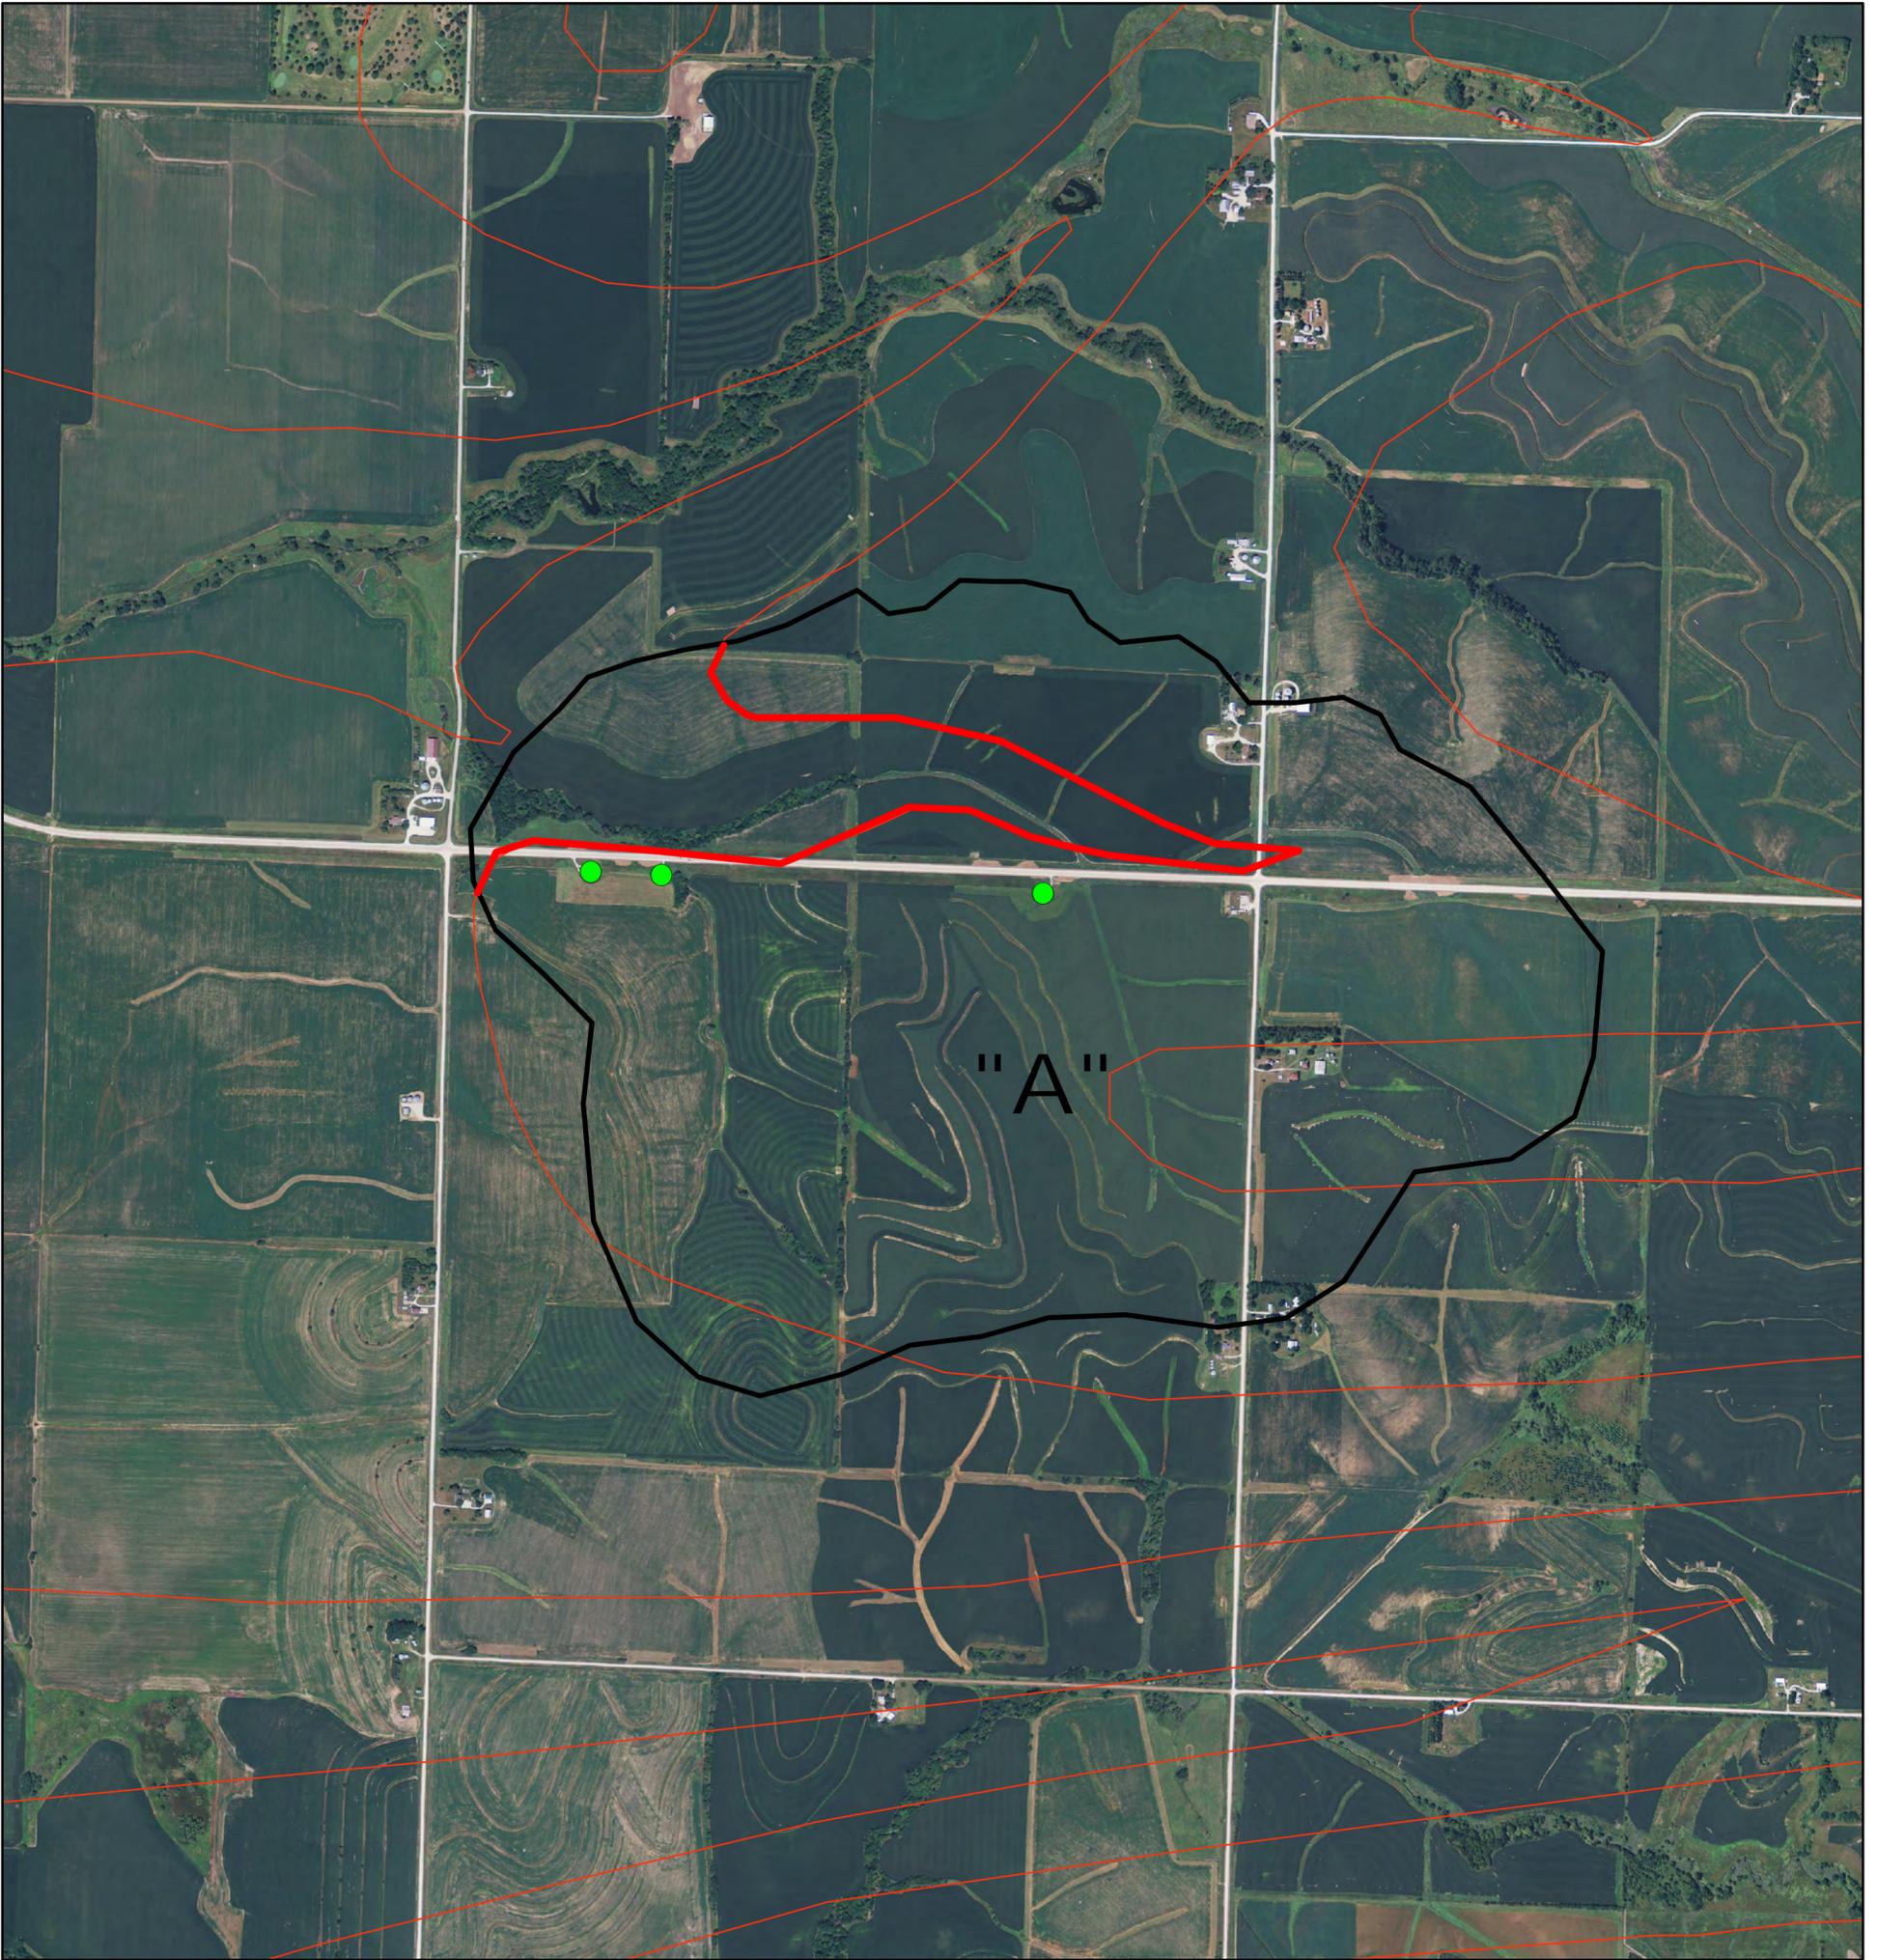

Non-Point Sources

1. **Source Water Contribution Area**. The attached map shows the source water contribution area based on the Phase II report. Area "A" is approximately 630 acres. The contribution area supplies a buried channel (area north of the wells highlighted in red). Phase II pump tests and sampling results indicate the buried channel sands and gravels is the source of the source water for wells 3 and 4.

Point Sources

There are no known potential point sources within the watershed.
