

Donnellson Unit Compartments 1 & 5

The following map shows the probable timber sale locations for Fiscal Year 2007.

Red Area— This area is in need of TSI. This management will help to increase the health and vigor of the stand. There will be approximately 6-10 trees removed per acre.

Grey Area— In 1986 there was a clear cut in the adjacent area to promote regeneration and in this area there was a shelter wood harvest to encourage regeneration. The regeneration has been fantastic and it is now time to release the under story by removing the over story. There will be approximately 8-12 trees removed per acre.

Yellow Area-- This area is in need of TSI. This management will help to increase the health and vigor of the stand. There will be approximately 6-10 trees removed per acre.
