

FORM PR-01 PROPOSED LIMITS

Proposals for establishing operating limits on emissions (e.g. hours of operation or product throughput) or on the mode of operation of an emission unit(s), and/or control equipment should be submitted with the information outlined below. Due to the complex nature of evaluating and setting alternative limits, additional information may be required upon review.

Any proposals for establishing or modifying limits on emissions or operations **MAY NOT** be a relaxation of any requirement in an existing permit, judicial consent decree, administrative order, or rule.

Proposed limitations may not be used as a basis for establishing the applicability of any requirement until **AFTER** the department has incorporated the limitation into a permit.

Proposals for emission limitations (e.g. pound per hour (lb/hr) or grains per standard cubic foot (gr/scf) should be done through the construction permits section of the Air Quality Bureau. The construction permits section performs National Ambient Air Quality Standard (NAAQS) evaluations on this type of emission limits. This type of evaluation is beyond the scope of the reviews performed by the Title V operating permits section as mandated by 40 CFR 70.

Because the material submitted for this portion of the application is a **proposal** it is necessary that, with each appropriate section of the application, information on the unrestricted (or currently permitted) potential operational parameters and emissions be submitted in the other parts of the application.

In this section, attach all appropriate forms containing the proposed limits. Only submit information on the proposal with this form.

Proposal contents:

- 1) Submit a written summary of the proposed limits. Include a table of contents for all materials submitted in support of the proposal.
- 2) For each piece of equipment for which a limit is proposed submit a separate copy of Part 1, Form 3.0, marked as "proposed limit" including the proposed information. If parameters included in the proposed limit address operational requirements for control equipment or any other pieces of equipment, include a separate form from Part 1 (e.g. CE-01, ME-01, etc.) to describe the change in operation from that reported in the Part 1 submission.
- 3) Submit a separate copy of Part 2, Sections 2 & 3, for each piece of equipment covered under the proposal for which any applicable requirement exists. Mark each form submitted as "proposed limit."
