

Environmental Management System & Compliance Suite

Web-based Environmental Software

Boost your bottom line. Build a better world.

The Intelx Environmental Management System (EMS) is a 100% web-based, highly configurable solution that helps organizations collect and organize EMS data, documents and activities to ensure ongoing compliance with regulatory requirements and management system standards.

www.intelx.com/environment

Benefits

- ▶ **Eliminate silos of data and avoid duplicate data entry**
Manage all your environmental issues and activities across multiple locations and departments through one centralized web-based portal.
- ▶ **Evaluate the status of your environmental program in an instant**
Gain a 360-degree, top-to-bottom view into the environmental performance of your organization and your suppliers through instant, real-time reports and KPI dashboards.
- ▶ **Mitigate risk by maintaining ongoing compliance**
Ensure conformance to published standards like ISO 14001 and RC 14001 as well as compliance with rapidly changing environmental legislation. Identify and correct non-compliances immediately with automated tracking and notifications.
- ▶ **Reduce costs and unlock frozen resources**
Streamline the collection, storage, assessment and reporting of environmental data by automating processes and freeing up personnel while avoiding "IT overhead" since hosting is included at no additional cost.
- ▶ **Maintain balance between profitability and reducing environmental impact**
Demonstrate your organization's environmental commitment to stakeholders and elevate corporate transparency by illustrating your responsible and forward-thinking environmental management approach to your customers.
- ▶ **Centralizes all environmental initiatives**
Centralizes environmental documents, data and activities in a single web-based interface, accessible by any staff member at any location.

“*It can be a daunting task to manage the various deadlines, permits and requirements for environmental compliance. Intelx’s solutions have played an integral role in our ability to reach and achieve our goals.*”

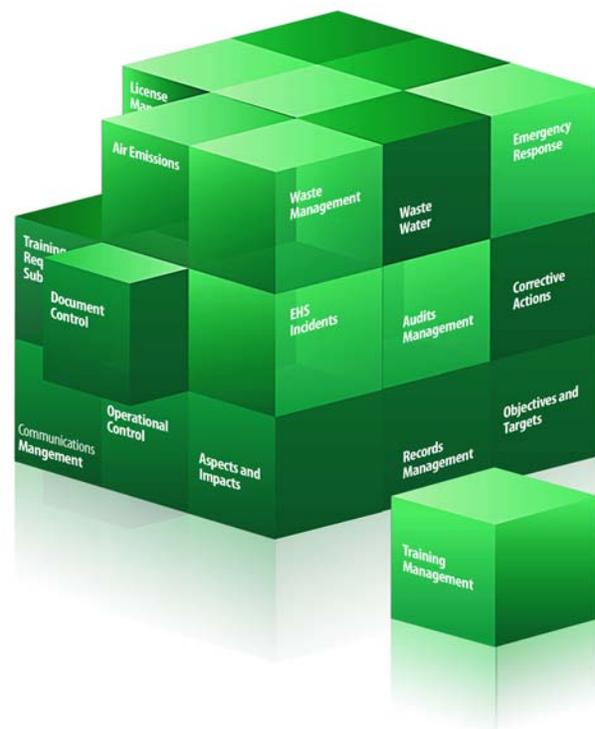

Jessica Wenger
University of Virginia

Modular, Yet Completely Integrated

The Intelex platform is a flexible, modular software system. You have the ability to select the modules that are most important to your organization and create an environmental management system that addresses your specific needs. Our library of modules has a solution to manage every component critical to a top-performing environmental management program.

This modular system allows you to:

- ▶ Choose the modules most relevant to your organization and processes
- ▶ Seamlessly integrate any new modules you purchase at a later date
- ▶ Navigate between modules through intuitive linkages within the system
- ▶ Build dashboards and reports that pull data from multiple modules and display critical information in one centralized place
- ▶ Create security groups to control user access within the modules while still storing data in a central information portal

“*Intelex Technologies is a forward-thinking software company. Its staff members understand workflow, data management and software design. They can discuss software design with people that are not software engineers and have created a software tool that is intuitive, easy to implement and fun to use.*”

Laura Scott
NRG

Environmental Management Capabilities

Intelex's web-based software covers every process in your environmental program. Modules can be purchased as standalone products or seamlessly linked together to provide you with a comprehensive environmental management system.

► Air, Water and Waste Management

Facilitates the storage, assessment and reporting of information (e.g., permits and monitory data) related to air emissions (e.g. GHG, VOC, ODS, and U.S. EPA mandatory reporting) and wastewater discharges (including U.S. NDPEs). The waste management module allows the cost-effective classification, tracking and reporting of hazardous and non-hazardous waste and recyclable streams.

► Legal Requirements and Compliance Management

Through a seamless link to third-party regulatory providers, users can document, assign and track action items to ensure ongoing compliance with changing legislation as well as assign responsibilities related to permits, corporate policies and directives.

► Environmental and Sustainability Management

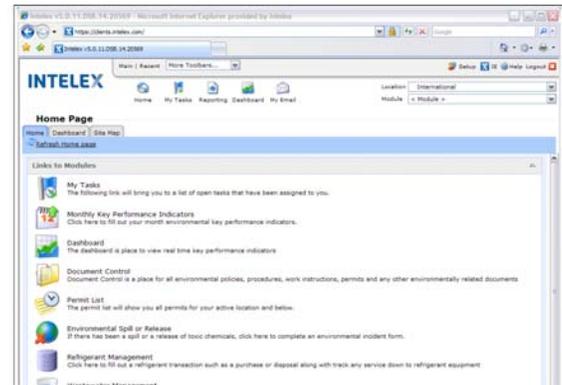

Provides a framework to obtain and maintain ISO 14001/RC 14001 conformance and drive sustainable development/corporate social responsibility initiatives as well as KPIs.

► Audits and Inspections Management

Easily manage your audit and inspection program, including real-time dashboards on status of non-conformances and findings. Our powerful checklist builder allows the quick import and management of multiple checklists.

► Document and Training Management

Track document revisions and approvals in a central, organization-wide file database. Old document versions and associated editing revisions are automatically archived for audit preparedness while appropriate documents are retained for legal requirements.

Modules: Air Emissions/GHG Management
Waste Management
Wastewater Management
Refrigerant Management

Modules: Legal and Other Requirements
Permits Management
Operational Control
Emergency Response
Monitoring and Measurement

Modules: Environmental Aspects and Impacts
Environmental Objectives and Targets
Environmental Incidents Reporting

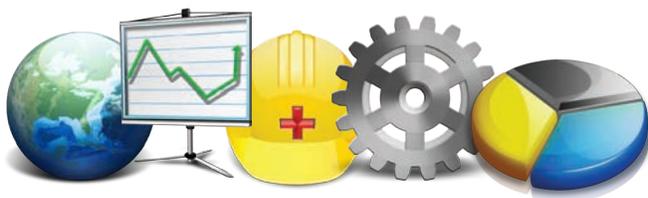

Modules: Audits Management
Management Review and Non-Conformances
Corrective/Preventative Actions

Modules: Document Control
Records Management
Training Management
Communications Management.

The Intelex Platform

The Intelex Environmental Management Solution includes the Intelex Platform, a fluid and feature-rich system leveraged by all Intelex modules.

- ▶ Intelex's philosophy on data management is **"The user does not find the data; the data finds the user"**.
- ▶ With **"Escalating Email Notification"**, the **"Manager's Dashboard"** and user-specific task management screens, Intelex ensures the right data is seen by the right people at the right time.
- ▶ A **100% web-based interface** lets users easily access Intelex modules through any web browser.
- ▶ **The Folder Locations** feature enables data to roll-up to appropriate management levels through a hierarchical organization/database structure.
- ▶ **My Tasks, My Staff's Tasks, and My Location Tasks Menus** are personalized menus listing all responsibilities, details, and update screens from a single click.
- ▶ **Automatic Escalating Email Notifications** are user-configurable so tasks can trigger unlimited escalating emails to any number of stakeholders.
- ▶ **A User-Specific Performance Dashboard** provides a high-level status summary of all environmental requirements, single-click access to detailed information, and data roll-up for location, region, department or global operations.
- ▶ **The Intelex User Security Module** lets every user or user group have their modules, fields, locations and data access privileges controlled.
- ▶ **Support is our #1 Feature.** All Intelex systems come with the best support in the business.

Business Performance Management

Intelex's web based Management System solutions are extremely flexible, enabling you to utilize any of the modules as standalone systems, or combine multiple modules to form your own tailored Management System solution.

Pre-configured systems include the:

- ▶ Intelex Safety Management System incorporating OHSAS 18001.
- ▶ Intelex Environmental Management System incorporating ISO 14001.
- ▶ Intelex Quality Management System incorporating ISO 9001:2000.

System Technology and Hosting

▶ ASP Hosting Services

All Intelex Modules & Packages are available as Intelex-hosted applications. Intelex provides turnkey server support, 24/7 security and continuous onsite and offsite database backups.

▶ In-House Installations

Intelex's Platform is designed to leverage an organization's existing infrastructure to provide facility, region and world-wide access.

▶ Scalability

The Intelex System is perfect for the smallest of organizations, and is powerful enough to streamline the processes of a worldwide organization.

▶ Database Integration

The Intelex System is built with an XML structure that enables easy database integration and data migration.

▶ Customization Services

All forms, workflow and follow-up processes within the Intelex system can be customized according to a client's request.

▶ Industry Standard Technology

The Intelex System is compatible with Microsoft Operating Systems, SQL Server and Oracle databases, and Internet Explorer to ensure easy installation, roll-out and system maintenance.

▶ Experienced Professionals

Intelex has highly technical representatives available to assist with all your system installation, database integration and maintenance needs.

Contact us today and see how Intelex can help you with your environmental, quality, safety, or general Business Performance Management needs.
