

# Clean Power Plan Evaluation Interstate Power and Light Company

# Clean Power Plan Evaluation

- IPL Clean Power Plan analyses
  - Sensitivities completed to develop public comments
  - Key takeaways:
    - Long-term credit for early reductions is valuable (renewables, coal retirements and fuel-switching)
    - Operational flexibility and broad trading is important
    - Compliance impacts contingent on state plan details
- Consideration of external modeling efforts
  - EPRI research
  - MISO Planning Advisory Committee
  - AWEA members
- Our generation strategy provides flexibility in transitioning to cleaner resources, and is independent of the Clean Power Plan
  - Regardless of the legal challenges, we will continue executing our plans, providing cleaner energy to customers in a reliable and cost-effective manner.

# Our Strategic Focus: Innovation through Responsible Resources

- Installing air quality control systems and modernizing our coal-fired units;
- Retiring older, smaller fossil-fueled generating units;
- Increasing highly efficient natural gas-fired generation;
- Adding wind, solar, and other renewable resources; and,
- Continuing to support robust energy efficiency programs.
