Iowa Department of Natural Resources
Title V Operating Permit

Name of Permitted Facility: Linwood Mining & Minerals Corporation

Facility Location: 401 East Front Street
Davenport, Iowa 52804

Air Quality Operating Permit Number: 04-TV-005R2
Expiration Date: September 2, 2024
Permit Renewal Application Deadline: March 2, 2024

EIQ Number: 92-3207
Facility File Number: 82-01-015

Responsible Official
Name: Jonathan Wilmshurst
Title: President
Mailing Address: 401 East Front Street
Davenport, Iowa 52804
Phone #: 563-324-1931
Email: jwilmshurst@linwoodmining.com

Permit Contact Person for the Facility
Name: Darin Osland
Title: Environmental Manager
Mailing Address: 401 East Front Street
Davenport, Iowa 52804
Phone #: 563-324-1931, ex. 1140
Email: dosland@linwoodmining.com

This permit is issued in accordance with 567 Iowa Administrative Code Chapter 22, and is issued subject to the terms and conditions contained in this permit.

For the Director of the Department of Natural Resources

Lori Hanson, Supervisor of Air Operating Permits Section

04-TV-005R2, 9/3/2019
Table of Contents

I. Facility Description and Equipment List ................................................................. 4

II. Plant - Wide Conditions .......................................................................................... 9

III. Emission Point Specific Conditions ...................................................................... 12

IV. General Conditions ................................................................................................ 129
   G1. Duty to Comply
   G2. Permit Expiration
   G3. Certification Requirement for Title V Related Documents
   G4. Annual Compliance Certification
   G5. Semi-Annual Monitoring Report
   G6. Annual Fee
   G7. Inspection of Premises, Records, Equipment, Methods and Discharges
   G8. Duty to Provide Information
   G9. General Maintenance and Repair Duties
   G10. Recordkeeping Requirements for Compliance Monitoring
   G11. Evidence used in establishing that a violation has or is occurring.
   G13. Hazardous Release
   G14. Excess Emissions and Excess Emissions Reporting Requirements
   G15. Permit Deviation Reporting Requirements
   G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP Regulations
   G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V Permit Modification
   G18. Duty to Modify a Title V Permit
   G19. Duty to Obtain Construction Permits
   G20. Asbestos
   G21. Open Burning
   G22. Acid Rain (Title IV) Emissions Allowances
   G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements
   G24. Permit Reopenings
   G25. Permit Shield
   G26. Severability
   G27. Property Rights
   G28. Transferability
   G29. Disclaimer
   G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification
   G31. Prevention of Air Pollution Emergency Episodes
   G32. Contacts List
V. Appendix A: Administrative Consent Order NO. 98-AQ-7

VI. Appendix B: Compliance Assurance Monitoring Plans

Abbreviations

acfm........................actual cubic feet per minute
CFR........................Code of Federal Regulation
CE .........................control equipment
CEM........................continuous emission monitor
°F..........................degrees Fahrenheit
EIQ..........................emissions inventory questionnaire
EP..........................emission point
EU..........................emission unit
gr./dscf ....................grains per dry standard cubic foot
IAC........................Iowa Administrative Code
IDNR.......................Iowa Department of Natural Resources
LMP.......................Lime Manufacturing Plant
MVAC........................motor vehicle air conditioner
NAICS.....................North American Industry Classification System
NSPS........................new source performance standard
ppmv .......................parts per million by volume
lb./hr ......................pounds per hour
lb./MMBtu ...................pounds per million British thermal units
SCC.........................Source Classification Codes
scfm........................standard cubic feet per minute
SIC......................... Standard Industrial Classification
TPY.........................tons per year
USEPA .....................United States Environmental Protection Agency

Pollutants
PM........................particulate matter
PM$_{10}$....................particulate matter ten microns or less in diameter
SO$_2$......................sulfur dioxide
NO$_x$........................nitrogen oxides
VOC......................volatile organic compound
CO..........................carbon monoxide
HAP........................hazardous air pollutant
# I. Facility Description and Equipment List

Facility Name: Linwood Mining and Minerals Corporation  
Permit Number: 04-TV-005R2  

Facility Description: Crushed and Broken Limestone (SIC 1422)

II. Plant-Wide Conditions

Facility Name: Linwood Mining & Mineral Corporation
Permit Number: 04-TV-005R2

Permit conditions are established in accord with 567 Iowa Administrative Code rule 22.108

Permit Duration

The term of this permit is: 5 years
Commencing on: 9/2/2024
Ending on: 9/2/2024

Amendments, modifications and reopenings of the permit shall be obtained in accordance with 567 Iowa Administrative Code rules 22.110 - 22.114. Permits may be suspended, terminated, or revoked as specified in 567 Iowa Administrative Code Rules 22.115.

Emission Limits

Unless specified otherwise in the Source Specific Conditions, the following limitations and supporting regulations apply to all emission points at this plant:

- **Opacity (visible emissions):** 40% opacity
  Authority for Requirement: 567 IAC 23.3(2)"d"

- **Sulfur Dioxide (SO₂):** 500 parts per million by volume
  Authority for Requirement: 567 IAC 23.3(3)"e"

- **Particulate Matter:**
  No person shall cause or allow the emission of particulate matter from any source in excess of the emission standards specified in this chapter, except as provided in 567 – Chapter 24. For sources constructed, modified or reconstructed on or after July 21, 1999, the emission of particulate matter from any process shall not exceed an emission standard of 0.1 grain per dry standard cubic foot of exhaust gas, except as provided in 567 – 21.2(455B), 23.1(455B), 23.4(455B) and 567 – Chapter 24.
  For sources constructed, modified or reconstructed prior to July 21, 1999, the emission of particulate matter from any process shall not exceed the amount determined from Table I, or amount specified in a permit if based on an emission standard of 0.1 grain per standard cubic foot of exhaust gas or established from standards provided in 23.1(455B) and 23.4(455B).
  Authority for Requirement: 567 IAC 23.3(2)"a"

- **Fugitive Dust:** Attainment and Unclassified Areas - A person shall take reasonable precautions to prevent particulate matter from becoming airborne in quantities sufficient to cause a nuisance as defined in Iowa Code section 657.1 when the person allows, causes or permits any materials to be handled, transported or stored or a building, its appurtenances or a construction haul road to
be used, constructed, altered, repaired or demolished, with the exception of farming operations or
dust generated by ordinary travel on unpaved roads. Ordinary travel includes routine traffic and
road maintenance activities such as scarifying, compacting, transporting road maintenance
surfacing material, and scraping of the unpaved public road surface. (the preceding sentence is
State Only) All persons, with the above exceptions, shall take reasonable precautions to prevent
the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which
the emissions originate. The public highway authority shall be responsible for taking corrective
action in those cases where said authority has received complaints of or has actual knowledge of
dust conditions which require abatement pursuant to this subrule. Reasonable precautions may
include, but not be limited to, the following procedures.

1. Use, where practical, of water or chemicals for control of dusts in the demolition of
   existing buildings or structures, construction operations, the grading of roads or the
   clearing of land.

2. Application of suitable materials, such as but not limited to asphalt, oil, water or
   chemicals on unpaved roads, material stockpiles, race tracks and other surfaces which can
   give rise to airborne dusts.

3. Installation and use of containment or control equipment, to enclose or otherwise limit the
   emissions resulting from the handling and transfer of dusty materials, such as but not
   limited to grain, fertilizer or limestone.

4. Covering, at all times when in motion, open-bodied vehicles transporting materials likely
to give rise to airborne dusts.

5. Prompt removal of earth or other material from paved streets or to which earth or other
   material has been transported by trucking or earth-moving equipment, erosion by water or
   other means.

6. Reducing the speed of vehicles traveling over on-property surfaces as necessary to
   minimize the generation of airborne dusts.

Authority for Requirement: 567 IAC 23.3(2)"c"

---

40 CFR 60 – Subpart A

The Permittee shall comply with the applicable requirements of 40 CFR 60 Subpart A – General
Provisions for all sources subject to 40 CFR Subpart OOO - Standards of Performance for
Nonmetallic Mineral Processing Plants and 40 CFR 60 Subpart HH – Standards of
Performance for Lime Manufacturing Plants. Excerpts of the Subpart A Requirements are shown
below and are provided for reference only:

Sec. 60.12 Circumvention.

No owner or operator subject to the provisions of this part shall build, erect, install, or use
any article, machine, equipment or process, the use of which conceals an emission, which
would otherwise constitute a violation of an applicable standard. Such concealment includes,
but is not limited to, the use of gaseous diluents to achieve compliance with an opacity
standard or with a standard, which is based on the concentration of a pollutant in the gases
discharged to the atmosphere.
Sec. 60.14 Modification.
(a) Except as provided under paragraphs (e) and (f) of this section, any physical or operational change to an existing facility which results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies shall be considered a modification within the meaning of section 111 of the Act. Upon modification, an existing facility shall become an affected facility for each pollutant to which a standard applies and for which there is an increase in the emission rate to the atmosphere.

Sec. 60.15 Reconstruction.
(a) An existing facility, upon reconstruction, becomes an affected facility, irrespective of any change in emission rate.

567 IAC 23.1(2)

Administrative Consent Order NO. 98-AQ-7

The requirements of Administrative Consent Order (ACO) 98-AQ-7 are included in Iowa’s federally approved State Implementation Plan (SIP). While a subsequent ACO, 2002-AQ-10, superseded and replaced the 98-AQ-7 ACO, the 2002-AQ-10 ACO was never submitted for inclusion in the SIP and the 98-AQ-7 ACO was never submitted for removal from the SIP. As such, although Iowa rescinded the 2002-AQ-10 ACO on April 19, 2019, the requirements of ACO 98-AQ-7 remain in the SIP. The DNR has incorporated the still-relevant requirements of these ACOs into current construction permits. The DNR will request that those construction permits be included in Iowa’s federally approved SIP and that ACO 98-AQ-7 be removed. This operating permit includes requirements from the current construction permits and the 98-AQ-7 ACO. However, no action will be required on the part of the permittee to remove the 98-AQ-7 ACO’s requirements from this operating permit subsequent to and conditioned upon EPA’s final action removing ACO 98-AQ-7 from the Iowa SIP.

See Appendix A for further information.
III. Emission Point-Specific Conditions

Facility Name: Linwood Mining & Mineral Corporation
Permit Number: 04-TV-005R2

Emission Point ID Number: BL01

Associated Equipment

Associated Emission Unit ID Numbers: BL01
Emissions Control Equipment ID Number: BL01
Emissions Control Equipment Description: Windscreen and Water Suppression

Emission Unit vented through this Emission Point: BL01
Emission Unit Description: East Barge Loadout
Raw Material/Fuel: Limestone
Rated Capacity: 400 tons/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity-Conveyor Stacker
Emission Limit(s): 10% (1)
(1) Limit established per Table 3 of Subpart OOO Part 60
Authority for Requirement: DNR Construction Permit 02-A-168-S2
40 CFR Subpart OOO
567 IAC 23.1(2)"bbb" (2)
(2) IAC reference to NSPS Subpart OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

Pollutant: PM-10
Emission Limit(s): 0.105 lb/hr
Authority for Requirement: DNR Construction Permit 02-A-168-S2

Pollutant: PM
Emission Limit(s): 0.2 lb/hr (4), 0.1 gr/dscf
(4) PM emissions limit was added to restrict PTE.
Authority for Requirement: 567 IAC 23.3(2)"a"
DNR Construction Permit 02-A-168-S2
Pollutant: Fugitive Dust
Emission Limit: See Plant-Wide Conditions.
Authority for Requirement: See Plant-Wide Conditions.

**Operational Limits & Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**NSPS**
The facility is subject to the New Source Performance Standard (NSPS), Subpart OOO, Standards of Performance for Nonmetallic Mineral Processing Plants and the conveyor stacker is subject to Subpart OOO per 40 CFR §60.670 – 40 CFR §60.676.

Authority for Requirement: DNR Construction Permit 02-A-168-S2
40 CFR 60 Subpart A – 567 IAC 23.1(2)
40 CFR 60 Subpart OOO – 567 IAC 23.1(2)"bbb"

**Operating Requirements with Associated Monitoring and Recordkeeping**
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum combined throughput of emission units BL01 and BL02 shall not exceed 8,500 tons per calendar day.
   i. The owner or operator shall maintain records of the total throughput of BL01 and BL02 for each calendar day in tons.
B. Emission units BL01 and BL02 shall operate only between March 1 and December 31.
C. Emission units BL01 and BL02 shall not operate more than 6 days per calendar week and between hours of 6 am and 9 pm for each calendar day.
   i. The owner or operator shall maintain records detailing the date and operation times (start and stop) for BL01 and BL02.
D. The owner or operator shall operate water suppression system when visible emissions from processing units associated with East barge Loadout are observed.
E. The owner or operator shall check for visible emissions each time the East barge loadout is used. This requirement shall not apply on the days that processing units associated with East barge Loadout are not in operation.
   i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions.
   ii. If the owner or operator observes visible emissions during barge loading, the owner or operator shall investigate the emission unit, or the operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken.
F. The owner or operator shall develop an operating and maintenance plan for the water suppression system, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the water suppression system.

G. The owner or operator shall install the water suppression system on East barge loadout and West barge loadout by October 1, 2018.
   i. The owner or operator shall maintain a record of the completion date that the water suppression was installed on site.

Authority for Requirement: DNR Construction Permit 02-A-168-S2

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☒ No ☐

Relevant requirements of O & M plan for this equipment: PM$_{10}$ and Particulate Matter

Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.

Facility operation and maintenance plans are to be developed by the facility within six(6) months of the issuance date of this permit and the data pertaining to the plan maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.

Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
**Emission Point ID Number: BL02**

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant:  Opacity
Emission Limit(s):  40 %
Authority for Requirement:  567 IAC 23.3(2)"d"
Pollutant: PM-10  
Emission Limit(s): 2.48 lb/hr  
Authority for Requirement: DNR Construction Permit 71-A-084-S10

Pollutant: Particulate Matter (Federal)  
Emission Limit(s): 0.032 g/dscm (2)  
Authority for Requirement: DNR Construction Permit 71-A-084-S10  
567 IAC 23.1(2)"bbb" (3)

(2) 0.032 grams per dry standard cubic meter (g/dscm) = 0.014 grains per dry standard cubic foot (gr/dscf). Limit established per 40 CFR §60.672(a).

(3) IAC reference to NSPS Subpart OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

Pollutant: Particulate Matter (State)  
Emission Limit(s): 2.48 lb/hr  
Authority for Requirement: DNR Construction Permit 71-A-084-S10

Pollutant: Sulfur Dioxide (SO₂)  
Emission Limit(s): 500 ppmv  
Authority for Requirement: DNR Construction Permit 71-A-084-S10  
567 IAC 23.3(3)"e"

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**NSPS**

These emission units are subject to NSPS Subparts A (General Provisions; 40 CFR §60.1 – 40 CFR §60.19) and OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

**Operating Limits**

Operating limits for this emission unit shall be:

A. The fuel combusted in the Old Mill Dryer (EU CC-1a) is limited to either natural gas or landfill gas.

B. The facility shall operate only one of the following conveying systems, which are associated with #3 Loadout System (EU CC-1r), at a time:
   - Pneumatic conveyor
   - Fully enclosed belt conveyor

C. The owner or operator shall conduct visible emissions observation (Method 22) on emission units associated with #3 Loadout System (EU CC-1r) once per calendar week.

D. The owner or operator shall maintain the control equipment according to manufacturer’s specifications and maintenance schedule.
Operating Condition Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. These records shall show the following:

A. A record of all inspections/maintenance activities and any action resulting from the inspection/maintenance of the control equipment.
B. Owner/operator shall implement written procedures onsite to ensure only one conveyor system is operated. These procedures shall be retained onsite and made available for inspection.
C. If the owner or operator observes visible emissions from emission units associated with #3 Loadout System (EU CC-1r), the owner or operator shall investigate the emission units, control equipment or operations associated with EU CC-1r and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that emission units, control equipment or operations associated with EU CC-1r are not in operation.
D. Per 40 CFR §60.676(b), the results of each Method 22 test, including the date and any corrective actions taken.

Authority for Requirement: DNR Construction Permit 71-A-084-S10

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height (ft. from the ground): 72
Stack Opening (inches, dia): 42
Exhaust Flow Rate (scfm): 34,800
Exhaust Temperature (°F): 150
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 71-A-084-S10

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
Monitoring Requirements

The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Applicable Requirements

Emission Limits (lb/hr, gr/dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): See Note (1)
Authority for Requirement: 567 IAC 23.3(2)"c"

(1) IAC reference to NSPS Subpart OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

Pollutant: PM-10
Emission Limit(s): 1.61 lb/hr
Authority for Requirement: DNR Construction Permit 86-A-049-S9

Pollutant: Particulate Matter - Federal
Emission Limit(s): 0.032 g/dscm (2)

(2) 0.032 grams per dry standard cubic meter (g/dscm) = 0.014 grains per dry standard cubic foot (gr/dscf). Limit established per 40 CFR §60.672(a).
Authority for Requirement: DNR Construction Permit 86-A-049-S9

(3) IAC reference to NSPS Subpart OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR).
Pollutant: Particulate Matter - State
Emission Limit(s): 1.61 lb/hr, 0.01 gr/dscf
Authority for Requirement: 567 IAC 31.20(1)"d", LAER
DNR Construction Permit 86-A-049-S9

(4) Limit established when the Buffalo, IA area was designated nonattainment for Total Suspended Particulates (TSP). Any relaxation of the Lowest Achievable Emission Rate (LAER) after the Buffalo area is redesignated attainment for TSP is subject to review under the Prevention of Significant Deterioration (PSD) regulations in effect at the time the relaxation occurs.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

NSPS

These emission units are subject to NSPS Subparts A (General Provisions; 40 CFR §60.1 – 40 CFR §60.19) and OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

Authority for Requirement: DNR Construction Permit 86-A-049-S9
40 CFR 60 Subpart A – 567 IAC 23.1(2)
40 CFR 60 Subpart OOO – 567 IAC 23.1(2)"bbb"

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall maintain record per 40 CFR §60.676(b), the results of each Method 22 test, including the date and any corrective actions taken.

B. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition C (shown below) by June 30, 2019.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

C. The differential pressure drop across Baghouse (CE CC-2) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE CC-2). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE CC-2), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE CC-2) falls outside the range...
specified in condition C (shown above), the owner or operator shall investigate Baghouse (CE CC-2) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE CC-2) are not in operation.

D. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE CC-2), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE CC-2).

Authority for Requirement: DNR Construction Permit 86-A-049-S9

**Emission Point Characteristics**
The emission point shall conform to the specifications listed below:

Stack Height (ft., from the ground): 60
Stack Opening (inches, dia): 42
Exhaust Flow Rate (scfm): 30,600
Exhaust Temperature (°F): 150
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 86-A-049-S9

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes □ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes □ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes □ No ☒

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

NSPS

These emission units are subject to NSPS Subparts A (General Provisions; 40 CFR §60.1 – 40 CFR §60.19) and OOO (Standards of Performance for Nonmetallic Mineral Processing Plants; 40 CFR §60.670 – 40 CFR §60.676).

Authority for Requirement:  DNR Construction Permit 88-A-218-S6
  40 CFR 60 Subpart A – 567 IAC 23.1(2)
  40 CFR 60 Subpart OOO – 567 IAC 23.1(2)"bbb"

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of product loaded out using the Calcium Railcar loadout shall not exceed 160 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 3-hour average the amount of product loaded out in tons.

B. The maximum amount of product loaded out using the Calcium Truck loadout shall not exceed 85 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 3-hour average the amount of product loaded out in tons.

C. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition D (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

D. The differential pressure drop across Baghouse (CE CC-3) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE CC-3). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE CC-3), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the
average hourly pressure drop across Baghouse (CE CC-3) falls outside the range specified in condition D (shown above), the owner or operator shall investigate Baghouse (CE CC-3) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE CC-3) are not in operation.

E. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE CC-3), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE CC-3).

Authority for Requirement: DNR Construction Permit 88-A-218-S6

**Emission Point Characteristics**
The emission point shall conform to the specifications listed below.

- Stack Height (ft., from the ground): 37
- Stack Opening (inches): 17
- Exhaust Flow Rate (scfm): 1,500
- Exhaust Temperature (°F): Ambient
- Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 88-A-218-S6

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of product transferred using loadout #6 bins shall not exceed 70 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product transferred in tons.
   ii. The owner or operator shall maintain records of the 3-hour average the amount of product transferred in tons.

B. The owner or operator shall check for visible emissions from Loadout #6 bins (EP CC-16) once per week at a time while Loadout #6 bins (EP CC-16) is in operation. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from Loadout #6 bins (EP CC-16), the owner or operator shall investigate the emission unit or operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Loadout #6 bins (EP CC-16) is not in operation.

Authority for Requirement: DNR Construction Permit 17-A-488

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height (ft., from the ground): 62
Stack Opening (inches, dia.): 32 x 32
Exhaust Flow Rate (scfm): 2,178
Exhaust Temperature (°F): Ambient
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 17-A-488

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

Associated Emission Unit ID Numbers: HR-U
Emissions Control Equipment ID Number: CE Unpaved Haul Roads
Emissions Control Equipment Description: Dust Suppressant

Applicable Requirements

Emission Unit vented through this Emission Point: HR-U
Emission Unit Description: Unpaved Haul Roads
Raw Material/Fuel: Limestone
Rated Capacity: NA

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: Fugitive Dust (1)
(1) The owner or operator shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond lot line of the property (see Plant-Wide Conditions).
Authority for Requirement: DNR Construction Permit 18-A-108-S1
567 IAC 23.3(2)"c"

Pollutant: PM-10
Emission Limit(s): 409 lbs/day (2)
(2) Emission limit for PM_{10} established at 409 pounds of PM_{10} per day, which correlates to surface silt loading as specified in Condition A and B of Operational Limits & Requirements (below) and maximum worst case truck traffic (material/product is shipped or received by truck). The parameters used in calculation are specified in Condition A and B (below). The emission rate also includes emissions of haul roads located within the storage Piles A, Pile 4, and Pile 8.
Authority for Requirement: DNR Construction Permit 18-A-108-S1

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:
A. The total surface material silt content shall not exceed 2.1 percent on unpaved road segments 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 24.
   i. Beginning October 1, 2018, performance testing on the unpaved haul road surface silt content shall be determined once every other calendar month. Performance testing shall be completed prior to any suppressant application. The silt content sampling shall be conducted according to the procedures outlined in AP-42, Appendix C.1 Procedures for Sampling Surface/Bulk Dust Loading and Appendix C.2 Procedures for Laboratory Analysis of Surface/Bulk Dust Loading Samples. If suppressant application cannot be accomplished for the entire month due to ambient temperatures or hazardous weather, silt content sampling is not required for that month.
   ii. Silt content sampling shall be conducted on unpaved road segments 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 24. The owner or operator shall sample a minimum of three unpaved road segments and rotate the segments sampled each time. The owner or operator shall determine the average of all samples taken each time, expressed as silt content for the unpaved roads.
   iii. The owner or operator shall maintain a log of each silt content sampling event that contains the following:
      i. Records of the road segments sampled every other calendar month.
      ii. The measured silt content as percent.
      iii. The date of silt sampling event.
      iv. The location of the sample taken.
      v. Sample area used for silt sampling in feet.
      vi. The operator’s initials.
   iv. The owner or operator shall maintain record of the average silt content results expressed as percent every other calendar month.

B. The total surface material silt content shall not exceed 6.2 percent on unpaved road segments 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 82, 83, and 84.
   i. Beginning October 1, 2018, performance testing on the unpaved haul road surface silt content shall be determined on a quarterly basis. Performance testing shall be completed prior to any suppressant application. The silt content sampling shall be conducted according to the procedures outlined in AP-42, Appendix C.1 Procedures for Sampling Surface/Bulk Dust Loading and Appendix C.2 Procedures for Laboratory Analysis of Surface/Bulk Dust Loading Samples.
   ii. Silt content sampling shall be conducted on unpaved road segments 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 82, 83, and 84. The owner or operator shall sample a minimum of three unpaved road segments and rotate the segments sampled for each calendar quarter. The owner or operator shall determine the average of all samples taken for each calendar quarter, expressed as silt content for the unpaved roads.
iii. The owner or operator shall maintain a log of each silt content sampling event that contains the following:
   i. Records of the road segments sampled each quarter.
   ii. The measured silt content as percent.
   iii. The date of silt sampling event.
   iv. The location of the sample taken.
   v. Sample area used for silt sampling in feet.
   vi. The operator’s initials.

iv. The owner or operator shall maintain record of the average silt content results expressed as percent for each quarter.

C. The owner or operator shall utilize control measures to reduce particulate emissions generated on unpaved road segments, while in use except as noted in conditions C.ii and C.iii (shown below). These measures include any of the following:

   i. Chemical dust suppressant application. The owner or operator shall apply chemical dust suppressant to the road surface at minimum frequency of twice per month.

   ii. If the suppressant cannot be applied because the ambient air temperature (as measured at the facility during daylight operating hours) will be less than 35°F (1.7°C) or conditions due to weather could create hazardous driving conditions, then the suppressant application shall be postponed and applied immediately after the scheduled date as the conditions preventing the application have abated.

   iii. Suppressant application need not occur when a rain gauge located at the site indicates that at least 0.2 inches of precipitation (water equivalent) has occurred within the preceding 24-hour time period. However, suppressant application shall resume within 24-hours after the precipitation event has ended

D. If visible emissions are observed from the Unpaved Road Segments, during use, the owner or operator shall immediately apply water or chemical dust suppressant to haul road segment.

E. The owner or operator shall maintain as record of the suppressant application on unpaved road segments. The record shall include suppressant application frequency, quantity applied and suppressant utilized. If suppressant is not applied due to weather as specified in conditions C.ii and C.iii (shown above), a written record must be kept on site outlining the conditions and when suppressant application resumed.

F. Best Management Practices (BMP) – The owner or operator shall implement "good housekeeping" or best management practices to minimize fugitive emissions from unpaved road segments. Such practices may include but are not limited to:
   i. Clean up spills of materials on the road surface as expeditiously as possible and in a manner consistent with good practice for minimizing dust emissions,
   ii. Post and maintain speed limit (10 mph) signs,
   iii. Apply additional suppressant to material unloading/loading areas as necessary to prevent track out of material on the traveled road surface.
G. The owner or operator shall develop a written plan to implement, at a minimum, the Best Management Practices as specified in condition F (shown above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

H. Maximum number of trucks shall not exceed:
   i. 2,208 trucks per calendar month on segment 13.
   ii. 4772 trucks per calendar month on segment 85.
   iii. The owner or operator shall record the total number of trucks on segment 13 for each calendar month.
   iv. The owner or operator shall record the total number of trucks on segment 85 for each calendar month.
   v. Based on throughput and storage capacity limitations, the plant truck traffic on paved and unpaved surfaces is directly proportional to the quantity of trucks measured on segments 13 and 85 (customer output). If plant operations change, the owner or operator shall request amendment of the paved or unpaved haul roads permit requirements.

Authority for Requirement: DNR Construction Permit 18-A-108-S1

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The total surface material silt loading shall not exceed 8.2 g/m² on paved road segments 1, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 85 and 86.
i. Beginning October 1, 2018, performance testing on the haul road surface silt loading shall be determined on a quarterly basis. Performance testing shall be completed prior to any sweeping or water flushing. The silt loading sampling shall be conducted according to the procedures outlined in AP-42, Appendix C.1 Procedures for Sampling Surface/Bulk Dust Loading and Appendix C.2 Procedures for Laboratory Analysis of Surface/Bulk Dust Loading Samples.

ii. Surface silt loading sampling shall be conducted on paved road segments, as listed in 1, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 85 and 86. The owner or operator shall sample a minimum of three paved road segments and rotate the segments sampled each calendar quarter. The owner or operator shall determine the average of all samples taken for each calendar quarter, expressed as silt loading for the paved roads.

iii. The owner or operator shall maintain a log of each silt load sampling event that contains the following:
   a. Records of the road segments sampled each quarter.
   b. The measured silt loading as grams.
   c. The date of silt sampling event.
   d. The location of the sample taken.
   e. Sample area used for silt sampling in feet.
   f. The operator’s initials.

iv. The owner or operator shall maintain record of the average silt loading results in g/m² for each quarter.

B. Truck traffic emissions on the paved road shall be controlled by weekly sweeping, at a minimum, except as specified in conditions B. i, ii, and iii (shown below). At a minimum, the sweeper shall be an enclosed vacuum sweeper or functional equivalent as approved by the department.

i. If sweeping cannot be accomplished because the ambient air temperature (as measured at the facility during daylight operating hours) will be less than 35° F (1.7° C) or conditions due to weather could create hazardous driving conditions, then the sweeping shall be postponed and accomplished as soon after the scheduled date as the conditions preventing the sweeping have abated.

ii. Paved road sweeping need not occur when a rain gauge located at the site indicates that at least 0.2 inches of precipitation (water equivalent) has occurred within the preceding 24-hour time period. However, paved road sweeping shall resume within 24-hours after the precipitation event has ended.

iii. Paved road sweeping need not occur when the facility experiences no haul road traffic on that calendar day.

iv. The facility shall record the frequency of cleaning/sweeping performed on the haul roads. If the roads are not cleaned due to weather, a written record must be kept on site outlining the conditions.
C. Truck traffic emissions on the paved road shall be controlled by water flushing at a rate of 0.12 gallons per square feet, three times a day at a minimum, except as specified in B. i, ii and iii (shown above).

i. If water flushing cannot be accomplished because the ambient air temperature (as measured at the facility during daylight operating hours) will be less than 35° F (1.7° C) or conditions due to weather could create hazardous driving conditions, then the water flushing shall be postponed and accomplished as soon after the scheduled date as the conditions preventing the water flushing have abated.

ii. Paved road water flushing need not occur when a rain gauge located at the site indicates that at least 0.2 inches of precipitation (water equivalent) has occurred within the preceding 24-hour time period. However, paved road water flushing shall resume within 24-hours after the precipitation event has ended.

iii. Paved road water flushing need not occur when the facility experiences no haul road traffic on that calendar day.

iv. The facility shall record the frequency of water flushing performed on the haul roads. If the roads are not water flushed due to weather, a written record must be kept on site outlining the conditions.

D. Maximum number of trucks shall not exceed:

i. 2,208 trucks per calendar month on segment 13.

ii. 4,772 trucks per calendar month on segment 85.

iii. The owner or operator shall record the total number of trucks on segment 13 for each calendar month.

iv. The owner or operator shall record the total number of trucks on segment 85 for each calendar month.

v. Based on throughput and storage capacity limitations, the plant truck traffic on paved and unpaved surfaces is directly proportional to the quantity of trucks measured on segments 13 and 85 (customer output). If plant operations change, the owner or operator shall request amendment of the paved or unpaved haul roads permit requirements.

E. Best Management Practices (BMP) – The owner or operator shall implement "good housekeeping" or best management practices to minimize fugitive emissions from plant haul roads. Such practices include but are not limited to:

i. Clean up spills of raw materials and product on the haul road surface as expeditiously as possible and in a manner consistent with good practice for minimizing dust emissions.

ii. Clean around truck scale areas and process buildings in a manner consistent with good practice for minimizing fugitive emissions.

iii. Clean up spills of raw materials and product on Iowa Highway 22 as expeditiously as possible and in a manner consistent with good practice for minimizing dust emissions.

iv. Post and maintain speed limit (10 mph) signs.

F. The owner or operator shall develop a written plan to implement, at a minimum, the Best Management Practices as specified in condition E (shown above). The written plan and any
documentation as required by the plan shall be maintained onsite and available for inspection.

Authority for Requirement:  DNR Construction Permit 18-A-109-S1

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

B. The owner or operator shall notify the department within 30-days if the following storage piles are disturbed more frequently than once per calendar month.
   i. Pile 2, Pile 10, Pile 12, Pile 13, and Pile 15.
   ii. The owner or operator shall maintain records of the Pile 2, Pile 10, Pile 12, Pile 13, and Pile 15 disturbance frequency.

C. During high wind episodes (greater than 12 miles per hour), if visible emissions are observed from the working face of active Piles listed in the table above, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.
   i. The owner or operator shall develop a written plan to implement at a minimum measures to minimize emissions during high wind episodes as specified in condition C (shown above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

Operational Limits & Requirements  
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall maintain the building as an enclosed structure to utilize 95 percent reduction of particulate emissions generated at:
   i. Q-11C-1 Feed Conveyor  
   ii. Q-11C-2 Screener  
   iii. Q-11C-3 Overs Conveyor  
   iv. Q-11C-4 Unders Conveyor  
   v. Q-11C-5 Weight Conveyor

B. The owner or operator shall develop an operating and maintenance plan for the building structure, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the building structure.

C. The owner or operator shall install a windscreen on Pile I hopper by October 1, 2018.
   i. The owner or operator shall maintain a record of the date when installation of windscreen is completed.

D. The owner or operator shall maintain the windscreen in a manner to minimize emissions and achieve 50 percent reduction in emissions due to loadout of material from pile I hopper. The windscreen shall be at minimum enclosed on three sides, at a height of 5 feet above the hopper and maintained in good working order.
   i. The owner or operator shall develop an operating and maintenance plan for the
pile I hopper windscreen, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

ii. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the pile I hopper windscreen.

E. The owner or operator shall check for visible emissions from building enclosing all units associated with EP Q-11C once per calendar day at a time while units associated with EP Q-11C is in operation.

i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from building enclosing units associated with EP Q-11C, the owner or operator shall investigate the emission unit or operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that units associated with EP Q-11C are not in operation.

F. The owner or operator shall maintain the total area of Pile I to less than or equal to 28,179 square feet.

i. The owner or operator shall maintain annual records of Pile I area in square feet.

G. During high wind episodes (greater than 12 miles per hour) if visible emissions are observed from the working face of Pile I, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.

i. The owner or operator shall develop a written plan to implement at a minimum measures to minimize emissions during high wind episodes as specified in condition G (shown above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

H. Beginning June 30, 2019, the owner or operator shall maintain Pile I a minimum distance of 85 feet from the fence line along highway 22.

i. The owner or operator shall maintain records of the date when Pile I was moved 85 feet from the fence line along highway 22.

ii. The owner or operator shall maintain annual records of the distance from the fence line along highway 22 for Pile I.

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

A. Emission Limits with Kiln 4 Operating:

Pollutant: Opacity
Emission Limit(s): 15%
Authority for Requirement: DNR Construction Permit 73-A-219-S7
40 CFR 60 Subpart HH
567 IAC 23.1(2)'y'

Pollutant: PM-10
Emission Limit(s): 45.59 lb/hr
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: PM-10
Emission Limit(s): 0.51 lb/ton lime (2)
(2) This emission limit is for Kiln 4
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Particulate Matter (Federal)
Emission Limit(s): 0.30 kg/megagram (0.6 lb/ton) of stone feed
Authority for Requirement: DNR Construction Permit 73-A-219-S7
40 CFR 60 Subpart HH
567 IAC 23.1(2)'y'

Pollutant: Particulate Matter (State)
Emission Limit(s): 0.51 lb./ton lime (2)
(2) This emission limit is for Kiln 4.
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Sulfur Dioxide (SO₃)
Emission Limit(s): 9.45 lb/hr, 41.4 tons/year
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Sulfur Dioxide (SO₂)
Emission Limit(s): 500 ppmv – when combusting only gaseous fuels (i.e. natural gas and landfill gas) (1)
(1) The sulfur dioxide limit is the stricter of 6 lb./MMBtu and 500 ppmv when using a combination of fuels.
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.3(3)
Pollutant: Sulfur Dioxide (SO$_2$)
Emission Limit(s): 6 lb/MMBtu – when combusting only solid fuels (i.e. coal and pet coke) \(^{(1)}\)
\(^{(1)}\) The sulfur dioxide limit is the stricter of 6 lb/MMBtu and 500 ppmv when using a combination of fuels.
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.3(3)"a"(1)

Pollutant: Nitrogen Oxides (NOx)
Emission Limit(s): 58.9 lb/hr, 272.2 tons/year
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Carbon Monoxide
Emission Limit(s): 46.8 lb/hr, 205.2 tons/year
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Hydrochloric Acid (HCl)
Emission Limit(s): 0.35 lb/hr
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Sulfur Dioxide (SO$_2$)
Emission Limit(s): 500 ppmv – when combusting only gaseous fuels (i.e. natural gas and landfill gas) \(^{(3)}\)
\(^{(3)}\) The sulfur dioxide limit is the stricter of 6 lb/MMBtu and 500 ppmv when using a combination of fuels.
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.3(3)

B. Emission Limits When Kiln 4 Is Not Operating:

Pollutant: Opacity
Emission Limit(s): 40% \(^{(1)}\)
\(^{(1)}\) An exceedence of the indicator opacity of 10% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedence. If exceedences continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: PM-10
Emission Limit(s): 45.59 lb/hr
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: PM-10
Emission Limit(s): 1.58 lb/ton lime
Authority for Requirement: DNR Construction Permit 73-A-219-S7

Pollutant: Particulate Matter
Emission Limit(s): 1.58 lb/ton lime \(^{(2)}\)
\(^{(2)}\) The stack is also subject to a standard of 0.1 gr/scf
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.4(8)

Pollutant: Sulfur Dioxide (SO$_2$)
Emission Limit(s): 500 ppmv – when combusting only gaseous fuels (i.e. natural gas and landfill gas) \(^{(3)}\)
\(^{(3)}\) The sulfur dioxide limit is the stricter of 6 lb/MMBtu and 500 ppmv when using a combination of fuels.
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.3(3)
Pollutant: Sulfur Dioxide (SO₂)
Emission Limit(s): 6 lb/MMBtu – when combusting only solid fuels (i.e. coal and pet coke). (4)
(4) The sulfur dioxide limit is the stricter of 6 lb/MMBtu and 500 ppmv when using a combination of fuels.
Authority for Requirement: DNR Construction Permit 73-A-219-S7
567 IAC 23.3(3)"a"(1)

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

NSPS & NESHAP

A. Kiln #4 is subject to Subpart A (General Provisions, 40 CFR §60.1 – 40 CFR §60.19) and Subpart HH (Standards of Performance for Lime Manufacturing Plants, 40 CFR §§60.340 – 40 CFR §60.344) of the New Source Performance Standards (NSPS).

Authority for Requirement: DNR Construction Permit 73-A-219-S7
40 CFR 60 Subpart A – 567 IAC 23.1(2)
40 CFR 60 Subpart HH
567 IAC 23.1(2)"y"

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. Total lime production for the plant shall be limited according to the plant annual total NOₓ emission limitation set forth in Condition 1.a. and as listed in the equation in condition A. i (shown below):
   i. Compliance with the annual NOₓ limit shall be demonstrated as follows:
      Calculate the monthly NOₓ emissions from Kilns #1 – #4:
      Tons of NOₓ emissions/month = [(tons of lime production from Kilns #1 & #2) x (EF₁) + (tons of lime production from Kilns #3 & #4) x (EF₂)] ÷ 2000 lb/ton

      Where:
      EF₁ = lb NOₓ/ton of lime produced for the combined exhaust from kilns #1 and #2. The combined exhaust shall be used to purge the tunnel at least 12 hours before conducting the stack test, and the lime produced during the test period shall be recorded.
      EF₂ = lb NOₓ/ton of lime produced for the combined exhaust from kilns #3 and #4. The combined exhaust shall be used to purge the tunnel at least 12 hours before conducting the stack test, and the lime produced during the test period shall be recorded.
ii. Calculate the twelve (12) month rolling total NO\textsubscript{x} emissions for each month of operation.

B. The owner or operator of Kiln #4 shall install, calibrate, maintain, and operate a device for measuring the mass rate of stone feed to Kiln #4. The measuring device used must be accurate to within ± 5% of the mass rate over its operating range pursuant to NSPS Subpart HH [40 CFR §60.343(d)].

C. The owner or operator of the facility (plant number 82-01-015) shall either
   1. Install, calibrate, maintain, and operate a device for measuring the mass rate of lime products from Kilns #1, #2, #3, and #4. The measuring device used must be accurate to within ± 5% of the mass rate over its operating range or
   2. In lieu of installing a belt scale on all four (4) kilns, record the total production for Kilns 1 – 3 and the total production for Kiln 4 and use the following formula to demonstrate compliance with the NO\textsubscript{x} limit:

   \[
   \text{Tons of NO}\textsubscript{x} \text{ emissions/month} = \left(\frac{(\text{tons of lime production from Kilns #1, #2, & #3}) \times (EF_3) + (\text{tons of lime production from Kiln #4}) \times (EF_2)}{2000 \text{ lb/ton}}\right)
   \]

   Where:
   \( EF_3 = \text{lb NO}\textsubscript{x}/\text{ton of lime produced for the combined exhaust from kilns #1, #2, and #3. The combined exhaust shall be used to purge the tunnel at least 12 hours before conducting the stack test, and the lime produced during the test period shall be recorded.} \]

D. If the facility (plant number 82-01-015) intends on changing the method of demonstrating compliance with either the NO\textsubscript{x} emission limit or the opacity monitoring requirements of Condition 6, the facility shall inform (in writing) the Compliance Supervisor of the Air Quality Bureau and the Field Office of its intentions thirty (30) days prior to making the change.

E. The emission units listed in this permit are limited to coal, petroleum coke, natural gas, and landfill gas as fuels.

**Continuous Emission Monitoring Systems (CEMS)**

The facility (plant number 82-01-015) shall either:

- Install, calibrate, maintain, and operate a continuous emission monitoring system (CEMS) for measuring the opacity of the emissions discharged to the atmosphere and record the output of the system for all periods when Kiln #4 is in operation in accordance with the New Source Performance Standards (NSPS) Subpart HH (Standards of Performance for Lime Manufacturing Plants). The system shall be designed to meet the 40 CFR 60, Appendix B, Performance Specification 1 (PS1) or
- Conduct opacity monitoring for those periods when Kiln #4 is in operation per an EPA approved alternative opacity monitoring program.
Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height (ft. from the ground): 79
Stack Opening (inches, dia): 78
Exhaust Flow Rate (scfm): 125,000
Exhaust Temperature (°F): 108
Discharge Style: Vertical Unobstructed

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☒ No ☐
(CAM is required only when Kiln 4 is operating)

Authority for Requirement: 567 IAC 22.108(3)
**Emission Point ID Number:** LP-7

**Associated Equipment**

Associated Emission Unit ID Numbers: LP-7  
Emissions Control Equipment ID Number: LP-7  
Emissions Control Equipment Description: Baghouse

Emission Unit vented through this Emission Point: LP-7  
Emission Unit Description: Kiln Dust Tank and Loadout  
Raw Material/Fuel: Lime Fines  
Rated Capacity: Loadout: 80 tons/hour, 1050 tons of lime, limestone and flyash

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**  
*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity  
Emission Limit(s): 40 % \(^{(1)}\)  
\(^{(1)}\) An exceedance of the indicator opacity of No Visible Emissions will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).  
567 IAC 23.3(2)"d"

Pollutant: PM-10  
Emission Limit(s): 0.15 lb/hr  

Pollutant: Particulate Matter  
Emission Limit(s): 0.63 lb/hr, 0.1 gr/dscf  
567 IAC 23.3(2)"a"
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of product loaded out using lime kiln dust loadout shall not exceed 240 tons per 3-hr period.
   i. The owner or operator shall maintain records of the amount of product loaded out every 3-hours, in tons.

B. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition C. (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

C. The differential pressure drop across Baghouse (CE LP-7) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-7). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-7), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-7) falls outside the range specified in Condition C. (above), the owner or operator shall investigate Baghouse (CE LP-7) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-7) are not in operation.

D. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-7), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE LP-7).

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

Stack Height (ft. from the ground): 94  
Stack Opening (inches): 12  
Exhaust Flow Rate (scfm): 4,350  
Exhaust Temperature (°F): 100  
Discharge Style: Vertical Unobstructed  

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Agency Approved Operation & Maintenance Plan Required? Yes ☑ No ☐

Facility Maintained Operation & Maintenance Plan Required? Yes ☑ No ☐

Relevant requirements of O & M plan for this equipment: PM10 and Particulate Matter

*Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.*

Facility operation and maintenance plans are to be developed by the facility within six(6) months of the issuance date of this permit and the data pertaining to the plan maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.

Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☑ No ☐

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of lime loaded out using the truck loadout system shall not exceed 90 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 3-hour average of product loaded out in tons.

B. The stack shall be raised to 105 feet from the ground within 90 days of permit issuance.
   i. The owner or operator shall maintain a record of the completion date that stack EP LP-8 was increased to 50 feet from the ground.

C. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition D (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

D. The differential pressure drop across Baghouse (CE LP-8) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-8). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-8), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-8) falls outside the range specified in condition D (shown above), the owner or operator shall investigate Baghouse (CE LP-8) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-8) are not in operation.
E. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-8), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE LP-8).

Authority for Requirement: DNR Construction Permit 88-A-221-S9

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

Stack Height (ft., from the ground): 105  
Stack Opening (inches, dia): 22  
Exhaust Flow Rate (scfm): 5,500  
Exhaust Temperature (°F): 100  
Discharge Style: Vertical Unobstructed  

Authority for Requirement: DNR Construction Permit 88-A-221-S9

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒

Relevant requirements of O & M plan for this equipment: PM10 and Particulate Matter

Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.

*The data pertaining to the plan shall be maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.*
Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

Authority for Requirement:
DNR Construction Permit 91-A-324-S6

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

New Source Performance Standards (NSPS)

Kiln #4 is subject to Subpart A (General Provisions, 40 CFR §60.1 – 40 CFR §60.19) and Subpart HH (Standards of Performance for Lime Manufacturing Plants, 40 CFR §60.340 – 40 CFR §60.344) of the New Source Performance Standards (NSPS).

Authority for Requirement:
40 CFR 60 Subpart A, Subpart HH
567 IAC 23.1(2)"y"
DNR Construction Permit 91-A-324-S6

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. Operation through this emission point shall not exceed 876 hours per year on a rolling twelve-month total.
   i. Operator personnel shall maintain a log of baghouse usage on-site. This
tabulation shall include hours of usage per day, per month, and per year. Annual hours of operation shall be determined on a rolling-12-month total.

B. The operation of kilns 1, 2, 3, and 4 shall be operated in accordance with all conditions set forth in permit number 73-A-219-S1.

C. This emission point is limited to the following operating scenarios:
   i. Any of the four (4) kilns operating individually.
   iii. Kilns 1, 2, and 3.
   iv. Kilns 1, 2, and 4.
   vii. Kilns 1 & 3.
   viii. Kilns 2 & 3.
   ix. Kilns 1 & 2.

D. The following operating limits are set forth in lieu of the continuous opacity monitoring requirements established by NSPS Subpart HH. Should the owner or operator elect to install a COM in accordance with 60 CFR §60.343, these operating limits shall be disregarded.
   i. Should the emissions from kiln #4 be routed to the LP-9 baghouse for more than 876 hours in any consecutive twelve (12) month period, a COM shall be installed and certified on the baghouse within ninety (90) days of exceeding this time limit.
   ii. A log shall be maintained indicating the beginning and ending dates and times that emissions from kiln #4 are routed to the LP-9 baghouse. Baghouse operating parameters, such as pressure drop, shall be recorded daily as an indicator of baghouse operation.
   iii. Visible emission observations in accordance with Method 9 shall be taken by a certified observer for at least three six (6) minute periods each day that emissions from kiln #4 are routed to the LP-9 baghouse.
   iv. The date, time, and results of the visible emission observations described in item D. iii (shown above) shall be recorded.
   v. The visible emission observations described in condition D. iii (shown above) shall be initiated at random times during each day that emissions from kiln #4 are routed to the LP-9 baghouse.
   vi. In the event that the average opacity during a six (6) minute period is greater than 15%, visible emission observations in accordance with Method 9 shall continue to be taken and recorded until such time that the average opacity of a six (6) minute period is below 15%.
   vii. Reports of excess emissions, including the information specified in 40 CFR 60.7(c), shall be submitted semiannually. For purposes of this report, periods of excess emissions that shall be reported are defined as all six (6) minute periods during which the average opacity is greater than 15%.

E. The following operating condition monitoring is set forth in lieu of the continuous opacity monitoring requirements established by NSPS Subpart HH. Should the owner or operator elect to install a COM in accordance with 60 CFR §60.343, these recordkeeping
requirements shall be disregarded.

i. A log shall be maintained indicating the beginning and ending dates and times that emissions from kiln #4 are routed to the LP-9 baghouse. Baghouse operating parameters, such as pressure drop, shall be recorded daily as an indicator of baghouse operation.

ii. Visible emission observation in accordance with Method 9 shall be taken by a certified observer for at least three six (6) minute periods each day that emissions from kiln #4 are routed to the LP-9 baghouse.

iii. The date, time, and results of the visible emission observations required in condition D. iii (shown above), shall be recorded.

iv. Reports of excess emissions, including the information specified in 40 CFR 60.7(c), shall be submitted semiannually.

Authority for Requirement:  DNR Construction Permit 91-A-324-S6
40 CFR 60 Subpart A – 567 IAC 23.1(2)
40 CFR 60 Subpart HH
567 IAC 23.1(2)"y"

**Emission Point Characteristics**

_The emission point shall conform to the specifications listed below._

Stack Height (ft., from the ground):  72  
Stack Opening (inches, dia):  84  
Exhaust Flow Rate (scfm):  65,000  
Exhaust Temperature (°F):  220  
Discharge Style:  Vertical Unobstructed  
Authority for Requirement:  DNR Construction Permit 91-A-324-S6

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

_The owner/operator of this equipment shall comply with the monitoring requirements listed below._

**Continuous Emission Monitoring Systems (CEMS)**

Continuous emission monitoring shall not be required at this time. In lieu of operating a COMS, the owner or operator shall comply with permit conditions D and E in Operating Limits (above). The Department reserves the right to require the installation, calibration, maintenance, and operation of a CEMS in the future as needed (i.e. in the event the applicant requests an increase in hours of operation).
Opacity Monitoring:

When Kiln #4 is in operation:
See Operational Limits & Requirements.

When Kiln #4 is not in operation:
The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years. The facility shall use EPA Method 9 with a certified smoke reader for the monitoring method. If an opacity > (0%) is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If weather conditions prevent the observer from conducting an opacity observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake opacity readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Applicable Requirements

Emission Limits (lb/hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40% (1)

(1) An exceedance of the indicator opacity of No Visible Emissions will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

Authority for Requirement: DNR Construction Permit 97-A-1084-S4
567 IAC 23.3(2)"d"

Pollutant: PM-10
Emission Limit(s): 0.05 lb/hr
Authority for Requirement: DNR Construction Permit 97-A-1084-S4

Pollutant: Particulate Matter
Emission Limit(s): 0.57 lb/hr, 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 97-A-1084-S4
567 IAC 23.3(2)"a"
Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of product conveyed to bagging shall not exceed 100 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 3-hour average the amount of product loaded out in tons.

B. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition C (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

C. The differential pressure drop across Baghouse (CE LP-12) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-12). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-12), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-12) falls outside the range specified in condition C (shown above), the owner or operator shall investigate Baghouse (CE LP-12) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-12) are not in operation.

D. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-12), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE LP-12).

Authority for Requirement: DNR Construction Permit 97-A-1084-S4
**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

- Stack Height (ft., from the ground): 65
- Stack Opening (inches, dia.): 12
- Exhaust Flow Rate (scfm): 3,600
- Exhaust Temperature (°F): Ambient
- Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 97-A-1084-S4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Authority for Requirement: DNR Construction Permit 02-A-028-S5 567 IAC 23.3(2)"a"
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of lime loaded out using the rail loadout system shall not exceed 100 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 3-hour average of product loaded out in tons.

B. The stack shall be raised to 50 feet from the ground within 90 days after permit issuance.
   i. The owner or operator shall maintain a record of the completion date that stack EP LP-13 was raised to 50 feet from the ground.

C. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition D (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

D. The differential pressure drop across Baghouse (CE LP-13) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-13). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-13), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-13) falls outside the range specified in condition D (shown above), the owner or operator shall investigate Baghouse (CE LP-13) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-13) are not in operation.

E. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-13), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse
(CE LP-13).

F. The owner or operator shall complete the modification of EP LP-13 to add the Dolo to Rail Loadout Conveyor (LP-13E) by May 31, 2018.
   i. The owner or operator shall maintain a record of the completion date that the Dolo to Rail Loadout Conveyor (LP-13E) was added to EP LP-13.

Authority for Requirement: DNR Construction Permit 02-A-028-S5

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

- Stack Height (ft., from the ground): 50
- Stack Opening (inches): 10
- Exhaust Flow Rate (scfm): 1,800
- Exhaust Temperature (°F): 100
- Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 02-A-028-S5

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

Operational Limits & Requirements

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum production rate of dolo processing system shall not exceed 90,000 pounds per hour averaged over 6-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded, using the belt scale, in pounds.
   ii. The owner or operator shall maintain records of the 6-hour average of product loaded, using the belt scale, in pounds.

B. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition C (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

C. The differential pressure drop across Baghouse (CE LP-16) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-16). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-16), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-16) falls outside the range specified in condition C (shown above), the owner or operator shall investigate Baghouse (CE LP-16) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-16) are not in operation.

D. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-16), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE LP-16).

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of dolo loaded out using the dolo loadout system shall not exceed 100 tons per hour averaged over 6-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of product loaded out in tons.
   ii. The owner or operator shall maintain records of the 6-hour average of product loaded out in tons.

B. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition C (shown below) by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

C. The differential pressure drop across Baghouse (CE LP-17) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-17). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-17), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-17) falls outside the range specified in condition C (shown above), the owner or operator shall investigate Baghouse (CE LP-17) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-17) are not in operation.

D. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-17), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Baghouse (CE LP-17).

E. The owner or operator shall decommission loadout EP LP-17B (Bathtub) by May 1, 2018.
i. The owner or operator shall maintain a record of the date when EP LP-17B was decommissioned from use.

Authority for Requirement: DNR Construction Permit 11-A-336-S3

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

- Stack Height (ft. from the ground): 90

* Process design capacity: 11 tons per hour

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40 % (1)
(1) An exceedance of the indicator opacity of 10% will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).
Authority for Requirement: DNR Construction Permit 17-A-505-S2
567 IAC 23.3(2)"d"

Pollutant: PM-10
Emission Limit(s): 0.86 lb/hr
Authority for Requirement: DNR Construction Permit 17-A-505-S2

Pollutant: Particulate Matter
Emission Limit(s): 0.86 lb/hr, 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 17-A-505-S2
567 IAC 23.4(7)

Pollutant: Sulfur Dioxide (SO₂)
Emission Limit(s): 500 ppmv
Authority for Requirement: DNR Construction Permit 17-A-505-S2
567 IAC 23.3(3)
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

Unless specified by a federal regulation, all records as required by this permit shall be kept on-site for a minimum of two (2) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of solid fuel crushed in the crusher shall not exceed 11 tons per hour averaged over 3-hr period.
   i. For each hour, the owner or operator shall maintain records of the amount of solid fuel crushed in tons.
   ii. The owner or operator shall maintain records of the 3-hour average of solid fuel crushed in tons.

B. The burner shall be fueled by natural gas only.
   i. The owner or operator shall maintain records of the type of fuel combusted in the burner.

C. The facility shall not crush any other fuel besides coke/coal in the fuel crusher.
   i. The owner or operator shall maintain records of the type of fuel crushed in the crusher.

D. The owner or operator shall begin monitoring the differential pressure drop across the baghouse, as specified in condition 5.E. by May 1, 2018.
   i. The owner or operator shall maintain a record of the commencement date of the differential pressure drop monitoring of the control equipment.

E. The differential pressure drop across Baghouse (CE LP-39) shall be maintained between 2 and 10 inches of water column, based on 1-hr block average.
   i. The owner or operator shall properly operate and maintain equipment to monitor differential pressure drop across Baghouse (CE LP-39). The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
   ii. The owner or operator shall collect and record the pressure drop across Baghouse (CE LP-39), in inches of water, at a minimum of once every 2 minutes. Calculate and record the hourly average for all readings for each 1-hour block. If the average hourly pressure drop across Baghouse (CE LP-39) falls outside the range specified in Condition 5.E., the owner or operator shall investigate Baghouse (CE LP-39) and make corrections to the baghouse. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Baghouse (CE LP-39) are not in operation.

F. The owner or operator shall develop an operating and maintenance plan for the Baghouse (CE LP-39), including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and
any action resulting from the inspection and maintenance of the Baghouse (CE LP-39).

Authority for Requirement: DNR Construction Permit 17-A-505-S2

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

Stack Height (ft. from the ground): 50
Stack Opening (inches): 21
Exhaust Flow Rate (scfm): 6,500
Exhaust Temperature (°F): 175
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 17-A-505-S2

The temperature and flow rate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The maximum amount of solid fuel conveyed through the conveyor shall not exceed 70 tons per hour.
   i. For each hour, the owner or operator shall maintain records of the amount of solid fuel conveyed through the conveyor in tons.
   ii. The owner or operator shall maintain hourly records of the solid fuel conveyed in tons.
B. The maximum amount of solid fuel conveyed through the conveyor shall not exceed 300 tons per day. The maximum amount of solid fuel stored in the tank shall not exceed 300 tons per day.
   i. For each day, the owner or operator shall maintain records of the amount of solid fuel conveyed through the conveyor in tons and stored in the tank in tons.
   ii. The owner or operator shall maintain daily records of the solid fuel conveyed and stored in tons.
C. The owner or operator shall check for visible emissions from Solid Fuel Conveyor (EP LP-24) once per day at a time while Solid Fuel Conveyor (EP LP-24) is in operation. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from Solid Fuel Conveyor (EP LP-24), the owner or operator shall investigate the emission unit or operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Solid Fuel Conveyor (EP LP-24) is not in operation.

Authority for Requirement: DNR Construction Permit 17-A-494-S1

Emission Point Characteristics
The emission point shall conform to the specifications listed below:

Stack Height (ft. from the ground): 70
Stack Opening (inches): 32 x 32
Exhaust Flow Rate (scfm): 11.7
Exhaust Temperature (°F): Ambient
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 17-A-494-S1
The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall operate water suppression system when visible emissions from processing units Q-1 Crusher, Q-1 Conveyor#1 or Q-1 Stacker are observed.

B. The owner or operator shall check for visible emissions each time the processing units Q-1 Crusher, Q-1 Conveyor#1 and Q-1 Stacker are in operation. This requirement shall not apply on the days that processing units Q-1 Crusher, Q-1 Conveyor#1 and Q-1 Stacker are not in operation.
   i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions.
   ii. If the owner or operator observes visible emissions during operation of processing units Q-1 Crusher, Q-1 Conveyor#1 and Q-1 Stacker, the owner or operator shall investigate the emission unit, or the operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken.

C. The owner or operator shall develop an operating and maintenance plan for the water suppression system, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the water suppression system.

D. The owner or operator shall maintain the total area of Pile 6 to less than or equal to 26,685 square feet.
   i. The owner or operator shall maintain annual record of Pile 6 area in square feet.

E. During high wind episodes (greater than 16 miles per hour) if visible emissions are observed from the working face of Pile 6, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.
   i. The owner or operator shall develop a written plan to implement, at a minimum, measures to minimize emissions during high wind episodes as specified in condition E of Operating Requirements (above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.
F. The owner or operator shall comply with the requirements per 40 CFR §60.670 through §60.676 for Q-1 Stacker.

Authority for Requirement: DNR Construction Permit 11-A-337-S1

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall check for visible emissions each time the processing units listed in Emission Point Characteristics are in operation. This requirement shall not apply on the days that processing units listed in Emission Point Characteristics are not in operation.
   iii. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions.
   iv. If the owner or operator observes visible emissions during operation of processing units listed in Emission Point Characteristics, the owner or operator shall investigate the emission unit, or the operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken.

B. The owner or operator shall maintain the total area of Pile 7 to less than or equal to 19,461 square feet.
   ii. The owner or operator shall maintain annual records of Pile 7 area in square feet.

C. The owner or operator shall check for visible emissions from the equipment operating within Pile 7 once per day at a time while the equipment is in use.
   i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from the equipment with the piles, the owner or operator shall investigate the emission unit or operations associated with the emission unit and
make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that processing units located within the pile are not in operation.

D. During high wind episodes (greater than 16 miles per hour) if visible emissions are observed from the working face of Pile 7, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.

   i. The owner or operator shall develop a written plan to implement, at a minimum, measures to minimize emissions during high wind episodes as specified in condition D (shown above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

### Operational Limits & Requirements

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

#### Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall operate water suppression system when visible emissions from processing units listed in Table 1 (above) are observed.

B. The owner or operator shall check for visible emissions each time the processing units listed in Table 1 (above). This requirement shall not apply on the days that processing units listed in Table 1 (above) are not in operation.
   v. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions.
vi. If the owner or operator observes visible emissions during operation of processing units listed in Table 1 (above), the owner or operator shall investigate the emission unit, or the operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken.

C. The owner or operator shall develop an operating and maintenance plan for the water suppression system, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the water suppression system.

D. The owner or operator shall maintain the total area of Pile 4 to less than or equal to 47,468 square feet.
   i. The owner or operator shall maintain annual records of pile 4 area in square feet.

E. The average active surface moisture content for the material storage pile 4 shall be greater than or equal to 2.1% by weight.
   i. The owner or operator shall sample the active surface of storage pile 4 to determine moisture content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured moisture content as percent weight d) The average moisture content as percent by weight and e) The operator’s initials.

F. The average active surface silt from the material storage pile 4 shall be less than or equal to 3.9% by weight.
   i. The owner or operator shall sample the active surface of storage pile 4 to determine silt content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured silt content as percent weight d) The average silt content as percent by weight and e) The operator’s initials.

G. During high wind episodes (greater than 12 miles per hour) if visible emissions are observed from the working face of Pile 4 the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.
   i. The owner or operator shall develop a written plan to implement, at a minimum,
measures to minimize emissions during high wind episodes as specified in Table 1 (above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

H. The owner or operator shall only process wet material in TP16 Belt Stacker, TP18 Stacker, and TP19 Stacker.
   i. The owner or operator shall maintain a record if non-wet material is processed in TP16 Belt Stacker, TP18 Stacker, and TP19 Stacker.

Authority for Requirement: DNR Construction Permit 18-A-113

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall maintain the total area of Pile 1 to less than or equal to 80,318 square feet.
   i. The owner or operator shall maintain annual records of Pile 1 area in square feet.
B. The average active surface moisture content for the material storage pile 1 shall be greater than or equal to 1.2% by weight.
   i. The owner or operator shall sample the active surface of storage pile 1 to determine moisture content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured moisture content as percent weight d); The average moisture content as percent by weight and e) The operator’s initials.

C. The average active surface silt from the material storage pile 1 shall be less than or equal to 0.23% by weight.
   i. The owner or operator shall sample the active surface of storage pile 1 to determine silt content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured silt content as percent weight d); The average silt content as percent by weight and e) The operator’s initials.

D. The owner or operator shall maintain the total area of Pile 11 to less than or equal to 33,485 square feet.
   i. The owner or operator shall maintain annual records of Pile 11 area in square feet.

E. The average active surface moisture content for the material storage pile 11 shall be greater than or equal to 2.1% by weight.
   i. The owner or operator shall sample the active surface of storage pile 11 to determine moisture content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured moisture content as percent weight d); The average moisture content as percent by weight and e) The operator’s initials.

F. The average active surface silt from the material storage pile 11 shall be less than or equal to 3.9% by weight.
   i. The owner or operator shall sample the active surface of storage pile 11 to determine silt content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per
calendar quarter.

iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event: a) The date of the sample; b) The sample location; c) The measured silt content as percent weight d) The average silt content as percent by weight and e) The operator’s initials.

G. During high wind episodes (greater than 12 miles per hour) if visible emissions are observed from the working face of Piles 1 or 11, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.

i. The owner or operator shall develop a written plan to implement, at a minimum, measures to minimize emissions during high wind episodes as specified in condition G (shown above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Requirements with Associated Monitoring and Recordkeeping
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall maintain the area of merged Pile A (includes Barge, B, E, and H Piles), in square feet to less than or equal to 1,729,849.
   i. The owner or operator shall maintain annual records of pile area in square feet.

B. The owner or operator shall maintain the throughput of Pile B in tons, on a daily basis, to less than or equal to 2238.
   i. The owner or operator shall maintain daily records of pile throughput in tons.

C. The owner or operator shall maintain the throughput of Pile E in tons, on a daily basis, to less than or equal to 2640.
   i. The owner or operator shall maintain daily records of pile throughput in tons.

D. The owner or operator shall install a windscreen on 5 loadout hoppers within Pile B and Pile E by October 1, 2018.
   i. The owner or operator shall maintain a record of the date when installation of windscreen is completed.

E. The owner or operator shall maintain the windscreen in a manner to minimize emissions and achieve 50 percent reduction in emissions due to loadout of material from Pile B and Pile E loadout hopper. The windscreen shall at minimum be enclosed on three sides, at a height of 5 feet above the hopper and maintained in good working order.
   i. The owner or operator shall develop an operating and maintenance plan for the Pile B and Pile E loadout hopper windscreen, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   ii. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Pile B and Pile E loadout hopper windscreen.

F. The owner or operator shall operate water suppression system when visible emissions from processing units located in Pile B are observed except when the ambient air temperature (as measured at the facility during daylight operating hours) will be less than 35o F (1.7o C) or conditions due to weather could create hazardous conditions.

G. The owner or operator shall check for visible emissions each time the processing units located in Pile B are in operation. This requirement shall not apply on the days that processing units located in Pile B are not in operation.
i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions.

ii. If the owner or operator observes visible emissions, the owner or operator shall investigate the emission unit, or the operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken.

H. The owner or operator shall develop an operating and maintenance plan for the water suppression system, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the water suppression system.

I. The owner or operator shall check for visible emissions from the equipment operating within Pile Barge and Pile E once per day at a time while the equipment is in use.

i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from the equipment with the piles, the owner or operator shall investigate the emission unit or operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that processing units located within the pile are not in operation.

J. During high wind episodes (greater than 12 miles per hour) if visible emissions are observed from the working face of Pile Barge, Pile B, Pile E, or Pile H, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures shall include applying dust suppressant to the working face of the pile or covering the working face of the pile.

i. The owner or operator shall develop a written plan to implement, at a minimum, measures to minimize emissions during high wind episodes as specified in condition 5.J. The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

K. The average active surface moisture content for the material storage pile Barge shall be greater than or equal to 2.1% by weight.

i. The owner or operator shall sample the active surface of storage pile Barge to determine moisture content as percent by weight once per calendar quarter.

ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.

iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured moisture content as percent weight d) The average moisture content as percent by weight and e) The operator’s initials

L. The average active surface silt from the material storage pile Barge shall be less than or equal to 3.9% by weight.
i. The owner or operator shall sample the active surface of storage pile Barge to determine silt content as percent by weight once per calendar quarter.

ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.

iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event:
   a) The date of the sample;
   b) The sample location;
   c) The measured silt content as percent weight;
   d) The average silt content as percent by weight;
   e) The operator’s initials.

M. The average active surface moisture content for the material storage pile B shall be greater than or equal to 0.4% by weight.

i. The owner or operator shall sample the active surface of storage pile B to determine moisture content as percent by weight once per calendar quarter.

ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.

iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event:
   a) The date of the sample;
   b) The sample location;
   c) The measured moisture content as percent weight;
   d) The average moisture content as percent by weight;
   e) The operator’s initials.

N. The average active surface silt from the material storage pile B shall be less than or equal to 0.56% by weight.

i. The owner or operator shall sample the active surface of storage pile B to determine silt content as percent by weight once per calendar quarter.

ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.

iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event:
   a) The date of the sample;
   b) The sample location;
   c) The measured silt content as percent weight;
   d) The average silt content as percent by weight;
   e) The operator’s initials.

O. The average active surface moisture content for the material storage pile E shall be greater than or equal to 1.6% by weight.

i. The owner or operator shall sample the active surface of storage pile E to determine moisture content as percent by weight once per calendar quarter.

ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.

iii. The owner or operator shall determine the average moisture content as percent by weight for all samples taken per calendar quarter.

iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event:
   a) The date of the sample;
   b) The sample location;
   c) The
measured moisture content as percent weight d); The average moisture content as percent by weight and e) The operator’s initials.

P. The average active surface silt from the material storage pile E shall be less than or equal to 3.95% by weight.
   i. The owner or operator shall sample the active surface of storage pile E to determine silt content as percent by weight once per calendar quarter.
   ii. The owner or operator shall take a minimum of two active surface samples per calendar quarter.
   iii. The owner or operator shall determine the average silt content as percent by weight for all samples taken per calendar quarter.
   iv. On quarterly basis, the owner or operator shall maintain the following records for each sampling event a) The date of the sample; b) The sample location; c) The measured silt content as percent weight d); The average silt content as percent by weight and e) The operator’s initials.

Q. Beginning June 30, 2019, the owner or operator shall maintain Pile Barge, Pile B, and Pile E a minimum distance of 80 feet from the fence line along highway 22.
   i. The owner or operator shall maintain records of the date when Pile Barge, Pile B and Pile E were setback 80 feet from the fence line along highway 22.
   ii. The owner or operator shall maintain annual records of the distance from the fence line along highway 22 for Pile Barge, Pile B and Pile E.

R. The owner or operator shall install an enclosed building structure to utilize 95 percent reduction of particulate emissions generated, by June 30, 2019, at:
   i. Kiln 4 Screener (LP-29)
   ii. Kiln 1, 2, 3 Screener (LP-35)
   iii. The owner or operator shall maintain records of the completion date for the building enclosure on Kiln 4 Screener (LP-29) and Kiln 4 Screener (LP-29).

S. The owner or operator shall develop an operating and maintenance plan for the building structure, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
   i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the building structure.

T. The owner or operator shall maintain equipment to ensure 24-hour surveillance of all gaps in the property berm along the river boundaries. "No Trespassing" signs shall be posted at both ends of the gap in the property berm coverage to further restrict public access.

U. The owner or operator shall maintain a fence along all property lines except as specified in condition T (above) to restrict public access to the facility’s property.

V. The owner or operator shall install and maintain signage to restrict public access from the landfill to Linwood property by June 30, 2019.

Pile 9 (In pit), Maximum Pile Area: 123,623 ft2

*Maximum Rated Capacity is 150 Tons Per Hour

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Emission Limits (Q-3P Equipment)

The owner or operator is required to report all emissions as required by law, regardless of whether a specific emission limit has been established in this permit. The following emission limits shall not be exceeded:

Pollutant: Opacity
Emission Limit(s): Fugitive Dust (1)

(1) The owner or operator shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond lot line of the property (see Plant-Wide Conditions).

Authority for Requirement: DNR Construction Permit 02-A-017-S3
567 IAC 23.3(2)"c"
Pollutant: PM-10  
Emission Limit(s): 21.60 lbs/day  
Authority for Requirement: DNR Construction Permit 02-A-017-S3

**Emission Limits (Stackers and Pile 9)**  
The following emission limits shall not be exceeded:

Pollutant: Opacity  
Emission Limit(s): Fugitive Dust \(^{(2)}\)  
(2) The owner or operator shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond lot line of the property (see Plant-Wide Conditions).  
Authority for Requirement: DNR Construction Permit 02-A-017-S3  
567 IAC 23.3(2)"c"

Pollutant: PM-10  
Emission Limit(s): 1.38 lbs/day  
Authority for Requirement: DNR Construction Permit 02-A-017-S3

**Emission Limits (NSPS OOO)**  
The following emission limits shall not be exceeded for Q-3P equipment:

Pollutant: Opacity  
Emission Limit(s): 15 % - Crusher \(^{(3)}\)  
10 % - Screeners \(^{(3)}\)  
(3) Limits established per Table 3 of Subpart OOO, Part 60.  
Authority for Requirement: DNR Construction Permit 02-A-017-S3  
40 CFR 60 Subpart OOO – 567 IAC 23.1(2)"bbb"

**Operational Limits & Requirements**  
*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Requirements with Associated Monitoring and Recordkeeping**

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall install a four sided building or structure to enclose Q-03D Screen by October 1, 2018. The three sided building or structure shall be equivalent to 95% enclosure of quarry equipment specified in condition 3 of DNR Construction Permit 02-A-017-S3.  
   i. The owner or operator shall maintain a record of the date when construction of 4-side building or structure is completed.

B. The owner or operator shall develop an operating and maintenance plan for the 4-sided building or structure, including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
i. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the 4-side building or structure.

C. The owner or operator shall check for visible emissions from the enclosure on Q-03D Screen once per calendar day at a time while Q-03D Screen is in operation.
   i. The owner or operator shall record the date and time of the observation and the presence or absence of visible emissions. If the owner or operator observes visible emissions from the enclosure containing Q-03D Screen, the owner or operator shall investigate the emission unit or operations associated with the emission unit and make corrections to the associated operations or equipment. The owner or operator shall maintain a record of all corrective actions taken. This requirement shall not apply on the days that Q-03D Screen is not in operation.

D. The owner or operator shall maintain the total area of Pile 9 to less than or equal to 123,623 square feet.
   i. The owner or operator shall maintain annual records of Pile 9 area in square feet.

E. During high wind episodes (greater than 16 miles per hour), if visible emissions are observed from the working face of Pile 9, the owner or operator shall employ measures to eliminate or minimize emissions. Such measures may include applying dust suppressant to working face of the pile or coverings the working face of the pile.
   i. The owner or operator shall develop a written plan to implement, at a minimum, measures to minimize emissions during high wind episodes as specified in condition E (above). The written plan and any documentation as required by the plan shall be maintained onsite and available for inspection.

F. The owner or operator shall follow requirements per 40 CFR §60.670 through §60.676.

Authority for Requirement: DNR Construction Permit 02-A-017-S3

New Source Performance Standards (NSPS)

The facility (Q-3P equipment) is subject to the New Source Performance Standard (NSPS), Subpart OOO, Standards of Performance for Nonmetallic Mineral Processing Plants. Q-3P equipment are subject to the NSPS Subpart OOO from §60.670 to §60.676.

Authority for Requirement: DNR Construction Permit 02-A-017-S3
40 CFR 60 Subpart A – 567 IAC 23.1(2)
40 CFR 60 Subpart OOO – 567 IAC 23.1(2)"bbb"

Emission Point ID Number:  EM Engine

Associated Equipment

Associated Emission Unit ID Number:  EM Engine

Emission Unit vented through this Emission Point:  EM Engine
Emission Unit Description:  Kilns Emergency Engine (Model Year: 2016)
Raw Material/Fuel:  Natural Gas (Spark Ignition)
Rated Capacity:  201 Bhp, .5114 MMBtu/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant:  Opacity
Emission Limit(s):  40 %
Authority for Requirement:  567 IAC 23.3(2)"d"

Pollutant:  Particulate Matter
Emission Limit(s):  0.1 gr/dscf
Authority for Requirement:  567 IAC 23.3(2)"a"

Pollutant:  Sulfur Dioxide (SO$_2$)
Emission Limit(s):  500 ppmv
Authority for Requirement:  567 IAC 23.3(3)"e"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

NESHAP:
The emergency engine is subject to 40 CFR Part 63 Subpart ZZZZ - National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (RICE). According to 40 CFR 63.6590(a)(2)(ii) this spark ignition emergency engine, located at a major source, is a new stationary RICE as it was constructed on or after June 12, 2006.

According to 40 CFR 63.6590(c)(6), this emergency engine must meet the requirements of subpart ZZZZ by meeting the requirements of 40 CFR 60 Subpart JJJJ for spark ignition engines. No further requirements apply for this engine under subpart ZZZZ.

Authority for Requirement:  40 CFR Part 63 Subpart ZZZZ
567 IAC 23.1(4)"cz"
NSPS Subpart JJJJ Requirements

Emission Standards:
(40 CFR 60.4233(e) and Table 1 to Subpart JJJ)

<table>
<thead>
<tr>
<th>Maximum Engine Power</th>
<th>Manufacture Date</th>
<th>Emission Standards (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>g/HP-hr NOx HC + NOx CO (2) VOC (3) ppmvd at 15% O2 NOx CO VOC</td>
</tr>
<tr>
<td>HP ≥ 130</td>
<td>1/1/2009+</td>
<td>2.0 N/A 4.0 1.0 160 540 86</td>
</tr>
</tbody>
</table>

(1) Owners and operators of stationary non-certified SI engines may choose to comply with the emission standards in units of either g/HP-hr or ppmvd at 15 percent O2.

(2) See rule for alternative CO certification standards for engines ≥ 100 hp and manufactured prior to 1/1/2011.

(3) Formaldehyde emissions are not included.

Compliance Demonstrations:
1. You must demonstrate compliance with the emission standards according to one of following methods (40 CFR 60.4243(b)):
   a) Purchasing a certified engine that complies with the emission standards, or
   b) Purchasing a non-certified engine and demonstrating compliance with the emission standards. You must keep a maintenance plan and records of conducted maintenance and must, to the extent practicable, maintain and operate the engine in a manner consistent with good air pollution control practice for minimizing emissions. In addition, you must conduct performance tests to demonstrate compliance in accordance with 40 CFR 60.4244. Owners and operators are required to notify the DNR 30 days prior to the test date and are required to submit a stack test report to the DNR within 60 days after the completion of the testing. See 40 CFR 4243(b) for additional information.

<table>

<td>Required</td>
<td>Not required</td>
</tr>
</tbody>
</table>

2. Owners and operators of SI engines that are required to be certified and who operate and maintain the engine according to the manufacturer's written instructions must keep records of required maintenance. 40 CFR 60.4243(b)(1), 4243(a) and 4245(a)(2).

3. Owners and operators of natural gas fired engines may operate their engines using propane for a maximum of 100 hours per year as an alternative fuel solely during emergency operations, but must keep records of such use. If propane is used for more than 100 hours per year in an engine that is not certified to the emission standards when using propane, a performance test must be conducted to demonstrate compliance with the emission standards. 40 CFR 60.4243(e).

4. If you are an owner or operator of engine ≤ 500 HP and you purchase a non-certified engine or you do not operate and maintain your certified engine and control device according to the manufacturer's written emission-related instructions, you are required to perform initial performance testing, but you are not required to conduct subsequent performance testing unless the engine is rebuilt or undergoes major repair or maintenance. 40 CFR 60.4243(f).

5. Owners and operators of certified engines must keep a record from the manufacturer that the engines are certified to meet applicable emission standards. 40 CFR 60.4245(a)(3).
6. Owners and operators of non-certified engines or certified engines operating in a non-certified manner must keep documentation that these engines meet the applicable emission standards. 40 CFR 60.4245(a)(4).

Operating and Recordkeeping Requirements (40 CFR 4243(d))
1. Owners and operators of the following emergency SI engines that do not meet the applicable standards for non-emergency engines must install a non-resettable hour meter. 40 CFR 60.4237.

<table>
<thead>
<tr>
<th>Maximum Engine Power</th>
<th>Engine Was Built On Or After</th>
</tr>
</thead>
<tbody>
<tr>
<td>130 ≤ HP &lt; 500</td>
<td>1/1/2011</td>
</tr>
</tbody>
</table>

2. There is no time limit on the use of the emergency engine in emergency situations.
3. The engine may be operated for the purpose of maintenance checks and readiness testing for a maximum of 100 hours/year.
4. The engine may be operated for up to 50 hours per year for non-emergency purposes. This operating time cannot be used to generate income for the facility (e.g. supplying power to the grid) and should be included in the total of 100 hours allowed for maintenance checks and readiness testing.
5. Owners and operators of an emergency engine must keep records of all operation of the engine. The owner must record the date and time of operation of the engine and the reason the engine was in operation.
6. Owners and operators of the following emergency SI that does not meet the applicable standards for a non-emergency engine must keep the following records. 40 CFR 60.4245(b).

<table>
<thead>
<tr>
<th>Maximum Engine Power</th>
<th>Manufactured On Or After</th>
<th>Recordkeeping Requirement</th>

Authority for Requirements: 40 CFR Part 60, Subpart JJJJ

Monitoring Requirements
*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
IV. General Conditions
This permit is issued under the authority of the Iowa Code subsection 455B.133(8) and in accordance with 567 Iowa Administrative Code chapter 22.

G1. Duty to Comply
1. The permittee must comply with all conditions of the Title V permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action; for a permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. 567 IAC 22.108(9)"a"
2. Any compliance schedule shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based. 567 IAC 22.105 (2)"b"
3. Where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be enforceable by the administrator and are incorporated into this permit. 567 IAC 22.108 (1)"b"
4. Unless specified as either "state enforceable only" or "local program enforceable only", all terms and conditions in the permit, including provisions to limit a source's potential to emit, are enforceable by the administrator and citizens under the Act. 567 IAC 22.108 (14)
5. It shall not be a defense for a permittee, in an enforcement action, that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit. 567 IAC 22.108 (9)"b"
6. For applicable requirements with which the permittee is in compliance, the permittee shall continue to comply with such requirements. For applicable requirements that will become effective during the permit term, the permittee shall meet such requirements on a timely basis. 567 IAC 22.108(15)"c"

G2. Permit Expiration
1. Except as provided in rule 567—22.104(455B), permit expiration terminates a source’s right to operate unless a timely and complete application for renewal has been submitted in accordance with rule 567—22.105(455B). 567 IAC 22.116(2)
2. To be considered timely, the owner, operator, or designated representative (where applicable) of each source required to obtain a Title V permit shall submit on forms or electronic format specified by the Department to the Air Quality Bureau, Iowa Department of Natural Resources, Air Quality Bureau, Wallace State Office Building, 502 E 9th St., Des Moines, IA 50319-0034, two copies (three if your facility is located in Linn or Polk county) of a complete permit application, at least 6 months but not more than 18 months prior to the date of permit expiration. An additional copy must also be sent to U.S. EPA Region VII, Attention: Chief of Air Permitting & Standards Branch, 11201 Renner Blvd., Lenexa, KS 66219. Additional copies to local programs or EPA are not required for application materials submitted through the electronic format specified by the Department. The application must include all emission points, emission units, air pollution control equipment, and monitoring devices at the facility. All emissions generating activities, including fugitive emissions, must be included. The definition of a complete application is as indicated in 567 IAC 22.105(2). 567 IAC 22.105

G3. Certification Requirement for Title V Related Documents
Any application, report, compliance certification or other document submitted pursuant to this permit shall contain certification by a responsible official of truth, accuracy, and completeness. All certifications shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. 567 IAC 22.107 (4)
G4. Annual Compliance Certification
By March 31 of each year, the permittee shall submit compliance certifications for the previous calendar year. The certifications shall include descriptions of means to monitor the compliance status of all emissions sources including emissions limitations, standards, and work practices in accordance with applicable requirements. The certification for a source shall include the identification of each term or condition of the permit that is the basis of the certification; the compliance status; whether compliance was continuous or intermittent; the method(s) used for determining the compliance status of the source, currently and over the reporting period consistent with all applicable department rules. For sources determined not to be in compliance at the time of compliance certification, a compliance schedule shall be submitted which provides for periodic progress reports, dates for achieving activities, milestones, and an explanation of why any dates were missed and preventive or corrective measures. The compliance certification shall be submitted to the administrator, director, and the appropriate DNR Field office. 567 IAC 22.108 (15)"e"

G5. Semi-Annual Monitoring Report
By March 31 and September 30 of each year, the permittee shall submit a report of any monitoring required under this permit for the 6 month periods of July 1 to December 31 and January 1 to June 30, respectively. All instances of deviations from permit requirements must be clearly identified in these reports, and the report must be signed by a responsible official, consistent with 567 IAC 22.107(4). The semi-annual monitoring report shall be submitted to the director and the appropriate DNR Field office. 567 IAC 22.108 (5)

G6. Annual Fee
1. The permittee is required under subrule 567 IAC 22.106 to pay an annual fee based on the total tons of actual emissions of each regulated air pollutant. Beginning July 1, 1996, Title V operating permit fees will be paid on July 1 of each year. The fee shall be based on emissions for the previous calendar year.
2. The fee amount shall be calculated based on the first 4,000 tons of each regulated air pollutant emitted each year. The fee to be charged per ton of pollutant will be available from the department by June 1 of each year. The Responsible Official will be advised of any change in the annual fee per ton of pollutant.
3. The emissions inventory shall be submitted annually by March 31 with forms specified by the department documenting actual emissions for the previous calendar year.
4. The fee shall be submitted annually by July 1 with forms specified by the department.
5. If there are any changes to the emission calculation form, the department shall make revised forms available to the public by January 1. If revised forms are not available by January 1, forms from the previous year may be used and the year of emissions documented changed. The department shall calculate the total statewide Title V emissions for the prior calendar year and make this information available to the public no later than April 30 of each year.
6. Phase I acid rain affected units under section 404 of the Act shall not be required to pay a fee for emissions which occur during the years 1993 through 1999 inclusive.
7. The fee for a portable emissions unit or stationary source which operates both in Iowa and out of state shall be calculated only for emissions from the source while operating in Iowa.
8. Failure to pay the appropriate Title V fee represents cause for revocation of the Title V permit as indicated in 567 IAC 22.115(1)"d".

G7. Inspection of Premises, Records, Equipment, Methods and Discharges
Upon presentation of proper credentials and any other documents as may be required by law, the permittee shall allow the director or the director's authorized representative to:

1. Enter upon the permittee's premises where a Title V source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
3. Inspect, at reasonable times, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
4. Sample or monitor, at reasonable times, substances or parameters for the purpose of ensuring compliance with the permit or other applicable requirements. 567 IAC 22.108 (15) "b"

**G8. Duty to Provide Information**

The permittee shall furnish to the director, within a reasonable time, any information that the director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee also shall furnish to the director copies of records required to be kept by the permit, or for information claimed to be confidential, the permittee shall furnish such records directly to the administrator of EPA along with a claim of confidentiality. 567 IAC 22.108 (9) "e"

**G9. General Maintenance and Repair Duties**

The owner or operator of any air emission source or control equipment shall:

1. Maintain and operate the equipment or control equipment at all times in a manner consistent with good practice for minimizing emissions.
2. Remedy any cause of excess emissions in an expeditious manner.
3. Minimize the amount and duration of any excess emission to the maximum extent possible during periods of such emissions. These measures may include but not be limited to the use of clean fuels, production cutbacks, or the use of alternate process units or, in the case of utilities, purchase of electrical power until repairs are completed.
4. Schedule, at a minimum, routine maintenance of equipment or control equipment during periods of process shutdowns to the maximum extent possible. 567 IAC 24.2(1)

**G10. Recordkeeping Requirements for Compliance Monitoring**

1. In addition to any source specific recordkeeping requirements contained in this permit, the permittee shall maintain the following compliance monitoring records, where applicable:
   a. The date, place and time of sampling or measurements
   b. The date the analyses were performed.
   c. The company or entity that performed the analyses.
   d. The analytical techniques or methods used.
   e. The results of such analyses; and
   f. The operating conditions as existing at the time of sampling or measurement.
   g. The records of quality assurance for continuous compliance monitoring systems (including but not limited to quality control activities, audits and calibration drifts.)

2. The permittee shall retain records of all required compliance monitoring data and support information for a period of at least 5 years from the date of compliance monitoring sample, measurement report or application. Support information includes all calibration and maintenance records and all original strip chart recordings for continuous compliance monitoring, and copies of all reports required by the permit.
3. For any source which in its application identified reasonably anticipated alternative operating scenarios, the permittee shall:
a. Comply with all terms and conditions of this permit specific to each alternative scenario.
b. Maintain a log at the permitted facility of the scenario under which it is operating.
c. Consider the permit shield, if provided in this permit, to extend to all terms and conditions under each operating scenario. 567 IAC 22.108(4), 567 IAC 22.108(12)

**G11. Evidence used in establishing that a violation has or is occurring.**

Notwithstanding any other provisions of these rules, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any provisions herein.

1. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at a source:
   a. A monitoring method approved for the source and incorporated in an operating permit pursuant to 567 Chapter 22;
   b. Compliance test methods specified in 567 Chapter 25; or
   c. Testing or monitoring methods approved for the source in a construction permit issued pursuant to 567 Chapter 22.

2. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring, or information gathering methods:
   a. Any monitoring or testing methods provided in these rules; or
   b. Other testing, monitoring, or information gathering methods that produce information comparable to that produced by any method in subrule 21.5(1) or this subrule. 567 IAC 21.5(1)-567 IAC 21.5(2)

If the permittee is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permittee shall notify the department of this requirement. The plan shall be filed with all appropriate authorities by the deadline specified by EPA. A certification that this risk management plan is being properly implemented shall be included in the annual compliance certification of this permit. 567 IAC 22.108(6)

**G13. Hazardous Release**

The permittee must report any situation involving the actual, imminent, or probable release of a hazardous substance into the atmosphere which, because of the quantity, strength and toxicity of the substance, creates an immediate or potential danger to the public health, safety or to the environment. A verbal report shall be made to the department at (515) 725-8694 and to the local police department or the office of the sheriff of the affected county as soon as possible but not later than six hours after the discovery or onset of the condition. This verbal report must be followed up with a written report as indicated in 567 IAC 131.2(2). 567 IAC Chapter 131-State Only

**G14. Excess Emissions and Excess Emissions Reporting Requirements**

1. Excess Emissions. Excess emission during a period of startup, shutdown, or cleaning of control equipment is not a violation of the emission standard if the startup, shutdown or cleaning is accomplished expeditiously and in a manner consistent with good practice for minimizing emissions. Cleaning of control equipment which does not require the shutdown of the process equipment shall be limited to one six-minute period per one-hour period. An incident of excess emission (other than an incident during startup, shutdown or cleaning of control equipment) is a violation. If the owner or operator of a source maintains that the incident of excess emission was due to a malfunction, the owner or operator must show that the conditions which caused the
incident of excess emission were not preventable by reasonable maintenance and control measures. Determination of any subsequent enforcement action will be made following review of this report. If excess emissions are occurring, either the control equipment causing the excess emission shall be repaired in an expeditious manner or the process generating the emissions shall be shutdown within a reasonable period of time. An expeditious manner is the time necessary to determine the cause of the excess emissions and to correct it within a reasonable period of time. A reasonable period of time is eight hours plus the period of time required to shut down the process without damaging the process equipment or control equipment. A variance from this subrule may be available as provided for in Iowa Code section 455B.143. In the case of an electric utility, a reasonable period of time is eight hours plus the period of time until comparable generating capacity is available to meet consumer demand with the affected unit out of service, unless, the director shall, upon investigation, reasonably determine that continued operation constitutes an unjustifiable environmental hazard and issue an order that such operation is not in the public interest and require a process shutdown to commence immediately.

2. Excess Emissions Reporting
   a. Initial Reporting of Excess Emissions. An incident of excess emission (other than an incident of excess emission during a period of startup, shutdown, or cleaning) shall be reported to the appropriate field office of the department within eight hours of, or at the start of the first working day following the onset of the incident. The reporting exemption for an incident of excess emission during startup, shutdown or cleaning does not relieve the owner or operator of a source with continuous monitoring equipment of the obligation of submitting reports required in 567-subrule 25.1(6). An initial report of excess emission is not required for a source with operational continuous monitoring equipment (as specified in 567-subrule 25.1(1)) if the incident of excess emission continues for less than 30 minutes and does not exceed the applicable emission standard by more than 10 percent or the applicable visible emission standard by more than 10 percent opacity. The initial report may be made by electronic mail (E-mail), in person, or by telephone and shall include as a minimum the following:
      i. The identity of the equipment or source operation from which the excess emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and expected duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps being taken to remedy the excess emission.
      vi. The steps being taken to limit the excess emission in the interim period.
   b. Written Reporting of Excess Emissions. A written report of an incident of excess emission shall be submitted as a follow-up to all required initial reports to the department within seven days of the onset of the upset condition, and shall include as a minimum the following:
      i. The identity of the equipment or source operation point from which the excess emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps that were taken to remedy and to prevent the recurrence of the incident of excess emission.
vi. The steps that were taken to limit the excess emission.
vii. If the owner claims that the excess emission was due to malfunction, documentation to support this claim. 567 IAC 24.1(1)-567 IAC 24.1(4)

3. Emergency Defense for Excess Emissions. For the purposes of this permit, an "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include non-compliance, to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation or operator error. An emergency constitutes an affirmative defense to an action brought for non-compliance with technology based limitations if it can be demonstrated through properly signed contemporaneous operating logs or other relevant evidence that:
   a. An emergency occurred and that the permittee can identify the cause(s) of the emergency;
   b. The facility at the time was being properly operated;
   c. During the period of the emergency, the permittee took all reasonable steps to minimize levels of emissions that exceeded the emissions standards or other requirements of the permit; and
   d. The permittee submitted notice of the emergency to the director by certified mail within two working days of the time when the emissions limitations were exceeded due to the emergency. This notice fulfills the requirement of paragraph 22.108(5)"b." – See G15. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof. This provision is in addition to any emergency or upset provision contained in any applicable requirement. 567 IAC 22.108(16)

G15. Permit Deviation Reporting Requirements
A deviation is any failure to meet a term, condition or applicable requirement in the permit. Reporting requirements for deviations that result in a hazardous release or excess emissions have been indicated above (see G13 and G14). Unless more frequent deviation reporting is specified in the permit, any other deviation shall be documented in the semi-annual monitoring report and the annual compliance certification (see G4 and G5). 567 IAC 22.108(5)"b"

G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP Regulations
During the term of this permit, the permittee must notify the department of any source that becomes subject to a standard or other requirement under 567-subrule 23.1(2) (standards of performance of new stationary sources) or section 111 of the Act; or 567-subrule 23.1(3) (emissions standards for hazardous air pollutants), 567-subrule 23.1(4) (emission standards for hazardous air pollutants for source categories) or section 112 of the Act. This notification shall be submitted in writing to the department pursuant to the notification requirements in 40 CFR Section 60.7, 40 CFR Section 61.07, and/or 40 CFR Section 63.9. 567 IAC 23.1(2), 567 IAC 23.1(3), 567 IAC 23.1(4)

G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V Permit Modification
1. Off Permit Changes to a Source. Pursuant to section 502(b)(10) of the CAAA, the permittee may make changes to this installation/facility without revising this permit if:
   a. The changes are not major modifications under any provision of any program required by section 110 of the Act, modifications under section 111 of the act, modifications under section 112 of the act, or major modifications as defined in 567 IAC Chapter 22.
   b. The changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or in terms of total emissions);
   c. The changes are not modifications under any provisions of Title I of the Act and the changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or as total emissions);
   d. The changes are not subject to any requirement under Title IV of the Act (revisions affecting Title IV permitting are addressed in rules 567—22.140(455B) through 567 - 22.144(455B));.
   e. The changes comply with all applicable requirements.
   f. For each such change, the permitted source provides to the department and the administrator by certified mail, at least 30 days in advance of the proposed change, a written notification, including the following, which must be attached to the permit by the source, the department and the administrator:
      i. A brief description of the change within the permitted facility,
      ii. The date on which the change will occur,
      iii. Any change in emission as a result of that change,
      iv. The pollutants emitted subject to the emissions trade
      v. If the emissions trading provisions of the state implementation plan are invoked, then Title V permit requirements with which the source shall comply; a description of how the emissions increases and decreases will comply with the terms and conditions of the Title V permit.
      vi. A description of the trading of emissions increases and decreases for the purpose of complying with a federally enforceable emissions cap as specified in and in compliance with the Title V permit; and
      vii. Any permit term or condition no longer applicable as a result of the change.

2. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), record keeping, reporting, or compliance certification requirements. 567 IAC 22.110(2)

3. Notwithstanding any other part of this rule, the director may, upon review of a notice, require a stationary source to apply for a Title V permit if the change does not meet the requirements of subrule 22.110(1). 567 IAC 22.110(3)

4. The permit shield provided in subrule 22.108(18) shall not apply to any change made pursuant to this rule. Compliance with the permit requirements that the source will meet using the emissions trade shall be determined according to requirements of the state implementation plan authorizing the emissions trade. 567 IAC 22.110(4)

5. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes, for changes that are provided for in this permit. 567 IAC 22.108(11)

G18. Duty to Modify a Title V Permit
1. Administrative Amendment.
   a. An administrative permit amendment is a permit revision that does any of the following:
      i. Correct typographical errors
      ii. Identify a change in the name, address, or telephone number of any person identified in the permit, or provides a similar minor administrative change at the source;
      iii. Require more frequent monitoring or reporting by the permittee; or
      iv. Allow for a change in ownership or operational control of a source where the director determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new permittee has been submitted to the director.
   b. The permittee may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request. The request shall be submitted to the director.
   c. Administrative amendments to portions of permits containing provisions pursuant to Title IV of the Act shall be governed by regulations promulgated by the administrator under Title IV of the Act.
2. Minor Title V Permit Modification.
   a. Minor Title V permit modification procedures may be used only for those permit modifications that satisfy all of the following:
      i. Do not violate any applicable requirement;
      ii. Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the Title V permit;
      iii. Do not require or change a case by case determination of an emission limitation or other standard, or an increment analysis;
      iv. Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed in order to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include any federally enforceable emissions caps which the source would assume to avoid classification as a modification under any provision under Title I of the Act; and an alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act;
      v. Are not modifications under any provision of Title I of the Act; and
      vi. Are not required to be processed as significant modification under rule 567 - 22.113(455B).
   b. An application for minor permit revision shall be on the minor Title V modification application form and shall include at least the following:
      i. A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
      ii. The permittee's suggested draft permit;
      iii. Certification by a responsible official, pursuant to 567 IAC 22.107(4), that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
iv. Completed forms to enable the department to notify the administrator and the
affected states as required by 567 IAC 22.107(7).
c. The permittee may make the change proposed in its minor permit modification
application immediately after it files the application. After the permittee makes this
change and until the director takes any of the actions specified in 567 IAC 22.112(4) "a"
to "c", the permittee must comply with both the applicable requirements governing the
change and the proposed permit terms and conditions. During this time, the permittee
need not comply with the existing permit terms and conditions it seeks to modify.
However, if the permittee fails to comply with its proposed permit terms and conditions
during this time period, the existing permit terms and conditions it seeks to modify may
be enforced against the facility.

3. Significant Title V Permit Modification.
Significant Title V modification procedures shall be used for applications requesting Title V
permit modifications that do not qualify as minor Title V modifications or as administrative
amendments. These include but are not limited to all significant changes in monitoring permit
terms, every relaxation of reporting or recordkeeping permit terms, and any change in the
method of measuring compliance with existing requirements. Significant Title V modifications
shall meet all requirements of 567 IAC Chapter 22, including those for applications, public
participation, review by affected states, and review by the administrator, as those requirements
that apply to Title V issuance and renewal.
The permittee shall submit an application for a significant permit modification not later than
three months after commencing operation of the changed source unless the existing Title V
permit would prohibit such construction or change in operation, in which event the operation of
the changed source may not commence until the department revises the permit. 567 IAC 22.111-
567 IAC 22.113

G19. Duty to Obtain Construction Permits
Unless exempted in 567 IAC 22.1(2) or to meet the parameters established in 567 IAC
22.1(1)"c", the permittee shall not construct, install, reconstruct or alter any equipment, control
equipment or anaerobic lagoon without first obtaining a construction permit, or conditional
permit, or permit pursuant to rule 567 IAC 22.8, or permits required pursuant to rules 567 IAC
22.4, 567 IAC 22.5, 567 IAC 31.3, and 567 IAC 33.3 as required in 567 IAC 22.1(1). A permit
shall be obtained prior to the initiation of construction, installation or alteration of any portion of
the stationary source or anaerobic lagoon. 567 IAC 22.1(1)

G20. Asbestos
The permittee shall comply with 567 IAC 23.1(3)"a", and 567 IAC 23.2(3)"g" when activities
involve asbestos mills, surfacing of roadways, manufacturing operations, fabricating, insulating,
waste disposal, spraying applications, demolition and renovation operations (567 IAC
23.1(3)"a"); training fires and controlled burning of a demolished building (567 IAC 23.2).

G21. Open Burning
The permittee is prohibited from conducting open burning, except as provided in 567 IAC 23.2.
567 IAC 23.2 except 23.2(3)"j"; 567 IAC 23.2(3)"j" - State Only

G22. Acid Rain (Title IV) Emissions Allowances
The permittee shall not exceed any allowances that it holds under Title IV of the Act or the
regulations promulgated there under. Annual emissions of sulfur dioxide in excess of the number
of allowances to emit sulfur dioxide held by the owners and operators of the unit or the
designated representative of the owners and operators is prohibited. Exceedences of applicable
emission rates are prohibited. "Held" in this context refers to both those allowances assigned to the owners and operators by USEPA, and those allowances supplementally acquired by the owners and operators. The use of any allowance prior to the year for which it was allocated is prohibited. Contravention of any other provision of the permit is prohibited. 567 IAC 22.108(7)

G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements

1. The permittee shall comply with the standards for labeling of products using ozone-depleting substances pursuant to 40 CFR Part 82, Subpart E:
   a. All containers in which a class I or class II substance is stored or transported, all products containing a class I substance, and all products directly manufactured with a class I substance must bear the required warning statement if it is being introduced into interstate commerce pursuant to § 82.106.
   b. The placement of the required warning statement must comply with the requirements pursuant to § 82.108.
   c. The form of the label bearing the required warning statement must comply with the requirements pursuant to § 82.110.
   d. No person may modify, remove, or interfere with the required warning statement except as described in § 82.112.

2. The permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 CFR Part 82, Subpart F, except as provided for MVACs in Subpart B:
   a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to § 82.156.
   b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to § 82.158.
   c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to § 82.161.
   d. Persons disposing of small appliances, MVACs, and MVAC-like appliances must comply with reporting and recordkeeping requirements pursuant to § 82.166. ("MVAC-like appliance" as defined at § 82.152)
   e. Persons owning commercial or industrial process refrigeration equipment must comply with the leak repair requirements pursuant to § 82.156.
   f. Owners/operators of appliances normally containing 50 or more pounds of refrigerant must keep records of refrigerant purchased and added to such appliances pursuant to § 82.166.

3. If the permittee manufactures, transforms, imports, or exports a class I or class II substance, the permittee is subject to all the requirements as specified in 40 CFR part 82, Subpart A, Production and Consumption Controls.

4. If the permittee performs a service on motor (fleet) vehicles when this service involves ozone-depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term "MVAC" as used in Subpart B does not include the air-tight sealed refrigeration system used as refrigerated cargo, or system used on passenger buses using HCFC-22 refrigerant.

5. The permittee shall be allowed to switch from any ozone-depleting or greenhouse gas generating substances to any alternative that is listed in the Significant New Alternatives
Program (SNAP) promulgated pursuant to 40 CFR part 82, Subpart G, Significant New Alternatives Policy Program. 40 CFR part 82

G24. Permit Reopenings

1. This permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. 567 IAC 22.108(9)"c"

2. Additional applicable requirements under the Act become applicable to a major part 70 source with a remaining permit term of 3 or more years. Revisions shall be made as expeditiously as practicable, but not later than 18 months after the promulgation of such standards and regulations.

   a. Reopening and revision on this ground is not required if the permit has a remaining term of less than three years;
   b. Reopening and revision on this ground is not required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions have been extended pursuant to 40 CFR 70.4(b)(10)(i) or (ii) as amended to May 15, 2001.
   c. Reopening and revision on this ground is not required if the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. 567 IAC 22.108(17)"a", 567 IAC 22.108(17)"b"

3. A permit shall be reopened and revised under any of the following circumstances:

   a. The department receives notice that the administrator has granted a petition for disapproval of a permit pursuant to 40 CFR 70.8(d) as amended to July 21, 1992, provided that the reopening may be stayed pending judicial review of that determination;
   b. The department or the administrator determines that the Title V permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the Title V permit;
   c. Additional applicable requirements under the Act become applicable to a Title V source, provided that the reopening on this ground is not required if the permit has a remaining term of less than three years, the effective date of the requirement is later than the date on which the permit is due to expire, or the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. Such a reopening shall be complete not later than 18 months after promulgation of the applicable requirement.
   d. Additional requirements, including excess emissions requirements, become applicable to a Title IV affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.
   e. The department or the administrator determines that the permit must be revised or revoked to ensure compliance by the source with the applicable requirements. 567 IAC 22.114(1)

4. Proceedings to reopen and reissue a Title V permit shall follow the procedures applicable to initial permit issuance and shall effect only those parts of the permit for which cause to reopen exists. 567 IAC 22.114(2)
5. A notice of intent shall be provided to the Title V source at least 30 days in advance of the date the permit is to be reopened, except that the director may provide a shorter time period in the case of an emergency. 567 IAC 22.114(3)

G25. Permit Shield

1. The director may expressly include in a Title V permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:
   a. Such applicable requirements are included and are specifically identified in the permit; or
   b. The director, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

2. A Title V permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

3. A permit shield shall not alter or affect the following:
   a. The provisions of Section 303 of the Act (emergency orders), including the authority of the administrator under that section;
   b. The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
   c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the Act;
   d. The ability of the department or the administrator to obtain information from the facility pursuant to Section 114 of the Act. 567 IAC 22.108 (18)

G26. Severability

The provisions of this permit are severable and if any provision or application of any provision is found to be invalid by this department or a court of law, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected by such finding. 567 IAC 22.108 (8)

G27. Property Rights

The permit does not convey any property rights of any sort, or any exclusive privilege. 567 IAC 22.108 (9)"d"

G28. Transferability

This permit is not transferable from one source to another. If title to the facility or any part of it is transferred, an administrative amendment to the permit must be sought consistent with the requirements of 567 IAC 22.111(1). 567 IAC 22.111 (I)"d"

G29. Disclaimer

No review has been undertaken on the engineering aspects of the equipment or control equipment other than the potential of that equipment for reducing air contaminant emissions. 567 IAC 22.3(3)"c"

G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification

The permittee shall notify the department's stack test contact in writing not less than 30 days before a required test or performance evaluation of a continuous emission monitor is performed to determine compliance with applicable requirements of 567 – Chapter 23 or a permit condition. Such notice shall include the time, the place, the name of the person who will conduct the test and other information as required by the department. If the owner or operator does not provide timely notice to the department, the department shall not consider the test results or performance evaluation results to be a valid demonstration of compliance with applicable rules or permit conditions. Upon written request, the department may allow a notification period of less than 30
days. At the department’s request, a pretest meeting shall be held not later than 15 days prior to conducting the compliance demonstration. A testing protocol shall be submitted to the department no later than 15 days before the owner or operator conducts the compliance demonstration. A representative of the department shall be permitted to witness the tests. Results of the tests shall be submitted in writing to the department's stack test contact in the form of a comprehensive report within six weeks of the completion of the testing. Compliance tests conducted pursuant to this permit shall be conducted with the source operating in a normal manner at its maximum continuous output as rated by the equipment manufacturer, or the rate specified by the owner as the maximum production rate at which the source shall be operated. In cases where compliance is to be demonstrated at less than the maximum continuous output as rated by the equipment manufacturer, and it is the owner's intent to limit the capacity to that rating, the owner may submit evidence to the department that the source has been physically altered so that capacity cannot be exceeded, or the department may require additional testing, continuous monitoring, reports of operating levels, or any other information deemed necessary by the department to determine whether such source is in compliance. Stack test notifications, reports and correspondence shall be sent to:

Stack Test Review Coordinator
Iowa DNR, Air Quality Bureau
Wallace State Office Building
502 E 9th St.
Des Moines, IA  50319-0034
(515) 725-9526

Within Polk and Linn Counties, stack test notifications, reports and correspondence shall also be directed to the supervisor of the respective county air pollution program.

567 IAC 25.1(7)“a”, 567 IAC 25.1(9)

G31. Prevention of Air Pollution Emergency Episodes
The permittee shall comply with the provisions of 567 IAC Chapter 26 in the prevention of excessive build-up of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these contaminants on the health of persons.

567 IAC 26.1(1)

G32. Contacts List
The current address and phone number for reports and notifications to the EPA administrator is:

Iowa Compliance Officer
Air Branch
Enforcement and Compliance Assurance Division
11201 Renner Blvd.
Lenexa, KS 66219
(913) 551-7020

The current address and phone number for reports and notifications to the department or the Director is:

Chief, Air Quality Bureau
Iowa Department of Natural Resources
Wallace State Office Building
502 E 9th St.
Des Moines, IA  50319-0034
(515) 725-0268
Reports or notifications to the DNR Field Offices or local programs shall be directed to the supervisor at the appropriate field office or local program. Current addresses and phone numbers are:

**Field Office 1**  
909 West Main – Suite 4  
Manchester, IA 52057  
(563) 927-2640

**Field Office 2**  
2300-15th St., SW  
Mason City, IA 50401  
(641) 424-4073

**Field Office 3**  
1900 N. Grand Ave.  
Spencer, IA 51301  
(712) 262-4177

**Field Office 4**  
1401 Sunnyside Lane  
Atlantic, IA 50022  
(712) 243-1934

**Field Office 5**  
Wallace State Office Building  
502 E 9th St.  
Des Moines, IA 50319-0034  
(515) 725-0268

**Field Office 6**  
1023 West Madison Street  
Washington, IA 52353-1623  
(319) 653-2135

**Polk County Public Works Dept.**  
Air Quality Division

IOWA DEPARTMENT OF NATURAL RESOURCES
ADMINISTRATIVE CONSENT ORDER

IN THE MATTER OF: LINWOOD MINING & MINERALS CORP.

ADMINISTRATIVE CONSENT ORDER

TO: Linwood Mining & Minerals Corp.
   at Robert Nieselt
   General Manager, Operations
   401 East Front Street
   Davenport, Iowa 52801

Linwood Mining & Minerals Corp.
   at Joan L. Bush, Registered Agent
   4321 E. 60th Street
   Davenport, Iowa 52804

1. SUMMARY

   This Administrative Consent Order is entered into between the Iowa Department of Natural Resources (IDNR) and Linwood Mining & Minerals Corporation (Linwood) for the purpose of resolving PM-10 National Ambient Air Quality Violations monitored in Muscatine, Iowa. This Administrative Consent Order supersedes and replaces Administrative Order No. 97-AQ-18, which was issued on May 30, 1997.

   Any questions regarding this order should be directed to:

   Relating to technical requirements:
   Doug Campbell
   Iowa Department of Natural Resources
   7007 Blueridge Road, Suite 1
   Des Moines, Iowa 50322
   Ph: 515/281-8333

   Relating to appeal rights:
   Anne Schmick
   Iowa Department of Natural Resources
   7007 Blueridge Road, Suite 1
   Des Moines, Iowa 50322
   Ph: 515/281-6243

II. STATEMENT OF FACTS

   1. IDNR has monitored three exceedences of the 24-hour PM-10 National Ambient Air Quality Standard. On October 13, 1995, a DNR monitoring station located at 11100 N 61st Avenue in Davenport, Iowa, recorded a PM-10 concentration of 156.5 micrograms per cubic meter (µg/m^3), and on August 23, 1996, the same monitor recorded...
