

IOWA DNR: NPDES FORM 2F FOR INDUSTRIAL FACILITIES FACILITIES THAT DISCHARGE STORMWATER ASSOCIATED WITH INDUSTRIAL ACTIVITY

Permit Number	Facility Name		
	 •		

See page 1 of the instructions for the applicability of this form.

1. Outfall Locations

For each outfall that discharges stormwater associated with industrial activity, list its latitude and longitude and the route of flow to the first named stream.

Outfall	Latitude		Longitude		e	Route of Flow	
No.	Deg.	Min.	Sec.	Deg.	Min.	Sec.	Route of Flow

2. Site Drainage Map

Attach a site drainage map depicting the facility and its outfalls. The map must include:

- Topography (or indicating the outline of drainage areas served by the outfalls);
- Each of the facility's intake and discharge structures (outfalls);
- Paved areas and buildings within the drainage area of each stormwater outfall;
- Each known past or present area used for outdoor storage or disposal of significant materials;
- Each existing structural control measure to reduce pollutants in stormwater runoff;
- Materials loading and access areas;
- Areas where pesticides, herbicides, soil conditioners and fertilizers are applied;
- Each hazardous waste treatment, storage, or disposal unit;
- Each well where fluids are injected underground; and
- Springs and other surface water bodies that receive stormwater discharges from the facility.

3. Description of Pollutant Sources

3.A. For each outfall listed in Item 1, provide an estimate of the area of impervious surfaces drained to the outfall, and an estimate of the total surface area drained by the outfall.

Outfall No.	Area of Impervious Surface (include units)	Total Area Drained (include units)

- **3.B.** Provide a narrative description of significant materials that are or have in the past three years been treated, stored, or disposed in a manner to allow exposure to stormwater. Attach additional sheets if necessary. Include:
 - Method of treatment, storage, or disposal;
 - Materials management practices employed in the last three years to minimize contact by these materials with stormwater runoff;
 - Materials loading and access areas;
 - The outfalls affected; and
 - The location, manner, and frequency in which pesticides, herbicides, soil conditioners, and fertilizers are applied.

3.C. For each outfall listed in	Item 1, provide the location	n and a description of	fexisting structural a	nd nonstructural
control measures to reduce	pollutants in stormwater rur	noff. Attach additiona	al sheets if necessary	·

Outfall No.	Control Measures/Treatment

4. Non-stormwater Discharges

All outfalls that contain stormwater discharges associated with industrial activity must be tested or evaluated for the presence of non-stormwater discharges that are not covered by an NPDES permit. All non-stormwater discharges must be identified in a Form 2, 3, or 4, which must accompany this application. Below, provide a description of the testing or evaluation method used, the date of any testing, and the onsite draining points that were directly observed during a test. Attach additional sheets if necessary.

5. Significant Leaks or Spills

Provide existing information regarding any significant leaks or spills of toxic or hazardous pollutants at the facility in the last three years. Include the approximate date and location of the spill or leak and the type and amount of material released.

5/2019 jmf Form 2F – Page 2 of 8 DNR Form 542-1380

Outfall Number:	
-----------------	--

6. Discharge Information

6.A (Common Pollutants) You must provide sampling results for every pollutant in this table. Sampling must occur during a qualifying storm event. Complete one table for each outfall listed in Item 1.

Pollutant	Maximum Values (include units)		Average Values (include units)		Number of		Certified
	Grab Sample Taken During 1st 30 Minutes	Flow-weighted Composite	Grab Sample Taken During 1st 30 Minutes	Flow-weighted Composite	Storm Events Sampled	Source of Pollutants	Laboratory Number
Oil and Grease							
Biochemical Oxygen Demand (BOD ₅)							
Chemical Oxygen Demand (COD)							
Total Suspended Solids (TSS)							
Total Kjeldahl Nitrogen (TKN)							
Nitrate plus Nitrite Nitrogen							
Total Phosphorus							

You must also provide data for pH at each outfall.

рН	Minimum	Maximum	Number of Storm events sampled
Grab Sample Taken During 1st 30 Minutes			

Outfall Number:	

6.B (Effluent Guidelines and NPDES Permit)

List and provide results for each pollutant that is limited in an effluent guideline which the facility is subject to or any pollutant listed in the facility's NPDES permit for its process wastewater. Complete one table for each outfall listed in Item 1. Provide quantitative data from a qualifying storm event for all pollutants that you list. Attach additional sheets as necessary.

Pollutant	Maximum Values (include units)		Average Values (include units)		Number of		Certified
and CAS Number (if available)	Grab Sample Taken During 1st 30 Minutes	Flow-weighted Composite	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Storm Events Sampled	Source of Pollutants	Laboratory Number

Outfall Number:	

6.C (Refer to Table 1 of the instructions)

For each pollutant in Table 1 that you know or have reason to believe is present in your discharge, list the pollutant and its source. If any existing quantitative data from a qualifying storm event are available, provide the data. If no quantitative data are available, provide the source of the pollutants. Complete one table for each outfall listed in Item 1.

Pollutant		m Values e units)		rage Values clude units) Storm			Certified
and CAS Number (if available)	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Events Sampled	Source of Pollutants	Laboratory Number

Outfall Number:	

6.D (Refer to Table 2 of the instructions)

For each pollutant in Table 2 that you know or have reason to believe is present in your discharge, list the pollutant and its source. You must provide quantitative data. Complete one table for each outfall listed in Item 1.

Pollutant	Maximum Values (include units)		Average Values (include units)		Number of		Certified
and CAS Number (if available)	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Storm Events Sampled	Source of Pollutants	Laboratory Number

Outfall Number:	
Outfall Number:	

6.E. (Refer to Table 3 of the instructions)

For each pollutant in Table 3 that you know or have reason to believe is present in your discharge, list the pollutant and its source and provide any available quantitative data. Complete one table for each outfall listed in Item 1.

Pollutant	it (include units) (include units)		Number of		Certified		
and CAS Number (if available)	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Grab Sample Taken During 1 st 30 Minutes	Flow-weighted Composite	Storm Events Sampled	Source of Pollutants	Laboratory Number

Outfall Number:	

6.F. (Storm Events)

Provide data for the storm event(s) which resulted in the maximum values for the flow-weighted composite samples. Complete one table for each outfall listed in Item 1.

Date of Storm Event	Duration of Storm Event (minutes)	Total rainfall during storm event (inches)	Number of hours between beginning of storm measured and end of previous measurable rain event	Maximum flow rate during rain event (specify units)	Total flow from rain event (specify units)	Form of precipitation (rainfall, snowmelt)
			_			

FORM 2F INSTRUCTIONS DO NOT SUBMIT – FOR APPLICANT USE ONLY

You must fill out Form 2F if you have stormwater combined with industrial wastewater and sample the combined effluent. You may need to fill out Form 2F if you sample stormwater and industrial wastewater separately but do not have a General Permit #1.

1. Outfall Locations

Provide the location of each outfall. Provide the route of flow of each outfall to the first named stream, e.g., unnamed creek to Des Moines River.

2. Site Drainage Map

Attach a site drainage map depicting the facility and including:

- Topography (or indicating the outline of drainage areas served by the outfalls);
- Each of the facility's intake and discharge structures;
- Paved areas and buildings within the drainage area of each stormwater outfall;
- Each known past or present area used for outdoor storage or disposal of significant materials;
- Each existing structural control measure to reduce pollutants in stormwater runoff;
- Materials loading and access areas;
- Areas where pesticides, herbicides, soil conditioners and fertilizers are applied;
- Each hazardous waste treatment, storage, or disposal unit;
- Each well where fluids are injected underground; and
- Springs and other surface water bodies that receive stormwater discharges from the facility.

3. Narrative Description of Pollutant Sources

3.A.

- For each outfall, provide an estimate of the area drained by the outfall which is covered by impervious surfaces.
 For the purpose of this application, impervious surfaces are surfaces where stormwater runs off at rates that are significantly higher than background rates. Impervious surfaces include paved areas, building roofs, parking lots, and roadways.
- Include an estimate of the total area (pervious and impervious areas) drained by each outfall.

3.B.

Provide a narrative description of significant materials that in the past three years have been treated, stored, or disposed of in a manner to allow exposure to stormwater. Include:

- Method of treatment, storage, or disposal;
- Materials management practices employed in the last three years to minimize contact by these materials with stormwater runoff;
- Materials loading and access areas;
- The outfalls affected; and
- The location, manner, and frequency in which pesticides, herbicides, soil conditioners, and fertilizers are applied.

The term *significant materials* includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastics pellets; finished materials such as metallic products; raw materials used in foot processing or production; hazardous substances designated under Section 101 (14) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); any chemical the facility is required to report pursuant to Section 313 of Title III of the Superfund Amendments and Reauthorization Act (SARA); and fertilizers; pesticides; and waste products such as ashes, slag, and sludge that have the potential to be released with stormwater discharges.

3.C. For each outfall, list the structural and non-structural controls and describe any treatment.

Structural controls include:

- Structures that enclose materials handling or storage areas
- Covering materials
- Berms, dikes or diversion ditches
- Retention ponds, etc.

Nonstructural controls include practices such as:

- Spill prevention plans
- Employee training
- Visual inspections
- Preventative maintenance
- Housekeeping measures

4. Non-stormwater Discharges

Test or evaluate all outfalls with stormwater for the presence of non-stormwater discharges that are not covered by an NPDES permit. Tests for such non-stormwater discharge may include smoke tests, fluorometric dye tests, and analysis of accurate schematics as well as other appropriate tests. Include a description of the method used, the date of any testing, and the onsite drainage points that were directly observed during a test.

You must identify all non-stormwater discharges in a Form 2, 3, or 4. The Form 2, 3, or 4 must be included with this application. You must also certify on Form 5 that the outfall(s) covered by this part have been tested or evaluated for the presence of non-stormwater discharges and that all stormwater discharges from the outfalls included in Form 2F are identified in an accompanying Form 2, 3, or 4.

5. Significant Leaks or Spills

Using existing information, provide a description of any significant leaks or spills of toxic or hazardous pollutants at the facility in the last three years.

6. Discharge Information

Items 6.A through 6.F require you to collect and report sample results of the pollutants discharged from each of your stormwater outfalls. Each item addresses a different set of pollutants and must be completed in accordance with the specific instructions for that item. The following general instructions apply to all items.

General Instructions

Reporting

- All results must be reported as concentration.
- Use the following abbreviations in the columns headed "Units": ppm parts per million; mg/l milligrams per liter; ppb parts per billion; μg/l micrograms per liter;
- All samples that are representative of your effluent and less than 4 ½ years old must be included when determining long term averages and maximum daily values.

Sampling

 The collection of samples for the reported analyses should be supervised by a person experienced in performing sampling of industrial wastewater.

Form 2F Instructions - DO NOT SUBMIT

- You must follow any specific requirements contained in the applicable analytical methods for sample containers, sample preservation, holding times, the collection of duplicate samples, etc.
- You should sample at a time that is representative of your treatment system operating properly with no system
 upsets.
- You must collect samples from the center of the flow channel, where turbulence is at a maximum, at a site specified in your present permit, or at any site adequate for the collection of a representative sample.
- For most pollutants, you must analyze grab samples collected during the first 30 minutes of the storm event and flow-weighted composites from the entire storm event.
- You must collect only grab samples for pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, the volatile organics fraction of the GC/MS, and Escherichia coli (E. coli).

Qualifying Storm Event

A qualifying storm event is one that is greater than 0.1 inches and at least 72 hours from the previously
measurable storm event. When feasible, the variance in the duration of the event and the total rainfall of the
event should not exceed 50% from the average or median rainfall event in that area.

<u>Analysis</u>

- Analysis of pH, total residual chlorine, settleable solids, and temperature must occur on site.
- All other analyses must be conducted by a laboratory certified in the state of Iowa. Report the number of the
 certified laboratory in the final column of each table.

Reporting Levels

All analytical results must be reported using the actual numeric values determined by the analysis. In other
words, even where analytical results are below the detection or quantitation level of the method used, the
actual data should be reported, rather than reporting "non-detect" ("ND") or "zero" ("0").

6.A. (Common Pollutants)

You must complete item 6.A for all stormwater outfalls. You must sample and analyze for each pollutant listed. For oil and grease and pH, use only grab samples. For the other pollutants, you must collect and analyze a grab sample and a 24-hour composite. Grab samples must be collected during the first 30 minutes of the storm event.

6.B. (Effluent Guidelines and NPDES Permit)

You must complete item 6.B. for all stormwater outfalls. List all pollutants listed in your NPDES permit for process wastewater. Also list all pollutants that are limited in an effluent guideline to which the facility is subject. <u>Provide quantitative data for all pollutants that you list.</u> You do not need to include toxicity testing.

Refer to Tables 1, 2, and 3 of these instructions. For any pollutant marked with an asterisk, you must take a grab sample. For all other pollutants, you must collect grab and composite samples. Grab samples must be collected during the first 30 minutes of the storm event.

6.C. (Refer to Table 1)

Refer to Table 1 of these instructions. If you expect any of the pollutants to be present in your stormwater discharge, list them in 6.C. You do not need to repeat pollutants already listed in 6.A. or 6.B. You must provide either quantitative data for each pollutant or an explanation of its presence in your discharge.

For any pollutant marked with an asterisk, you must take a grab sample. For all other pollutants, you must collect grab and composite samples. Grab samples must be collected during the first 30 minutes of the storm event.

Form 2F Instructions - DO NOT SUBMIT

6.D. (Refer to Table 2)

Refer to Table 2 of these instructions. If you expect any of the pollutants to be present in your stormwater discharge, list them in 6.D. You do not need to repeat pollutants already listed in items 6.A-C. For pollutants expected to be present in concentrations greater than 10 μ g/L (0.010 μ g/L), you must provide quantitative data. For other pollutants, you must provide an explanation of their presences in your discharge.

For any pollutant marked with an asterisk, you must take a grab sample. For all other pollutants, you must collect grab and composite samples. Grab samples must be collected during the first 30 minutes of the storm event.

6.E. (Refer to Table 3)

Refer to Table 3 of these instructions. If you expect any of the pollutants to be present in your stormwater discharge, list them in 6.E. You do not need to repeat pollutants already listed in items 6.A-D. Provide either quantitative data or a description why the pollutant is expected to be discharged.

6.F.

See instructions on form.
