Iowa Lead Monitoring Location and Design Values 2016-2018

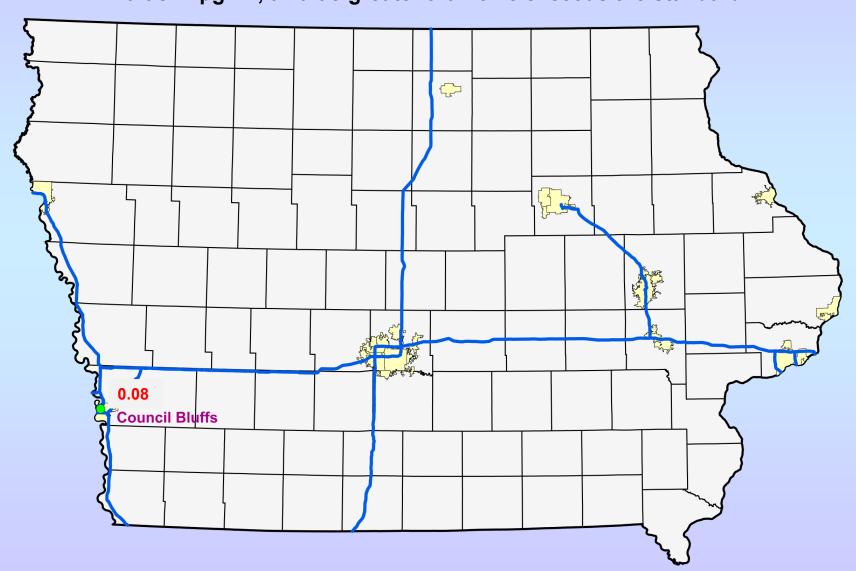

A design value is a tool that can be used to understand pollution levels at a specific location. A design value may be set for any pollutant. The U.S. EPA's official definition is explained this way: "a design value is the mathematically determined pollutant concentration at a particular site that must be reduced to, or maintained at or below the National Ambient Air Quality Standard to assume attainment." The design value number tells us how a particular site or area compares with the National Ambient Air Quality Standards (NAAQS).

lowa lead monitor location and information is detailed on the following pages. The EPA design value for lead is the highest 3-month rolling average for the most recent three years. EPA promulgated new lower lead standards on October 15, 2008. A monitoring site must have a design value less than or equal to 0.15 µg/m³ to be considered "in attainment" with the lead NAAQS. Additional information on the lead pollution and regulatory actions is available here: http://www.epa.gov/lead-air-pollution

Iowa Lead Monitoring Site (2018)							
AQS Site ID	Site Name	Location	County				
19-155-0011	Griffin Pipe	Council Bluffs	Pottawattamie				

Iowa Lead Design Value: 2016-2018

Value in $\mu g/m^3$, a value greater than 0.15 exceeds the standard

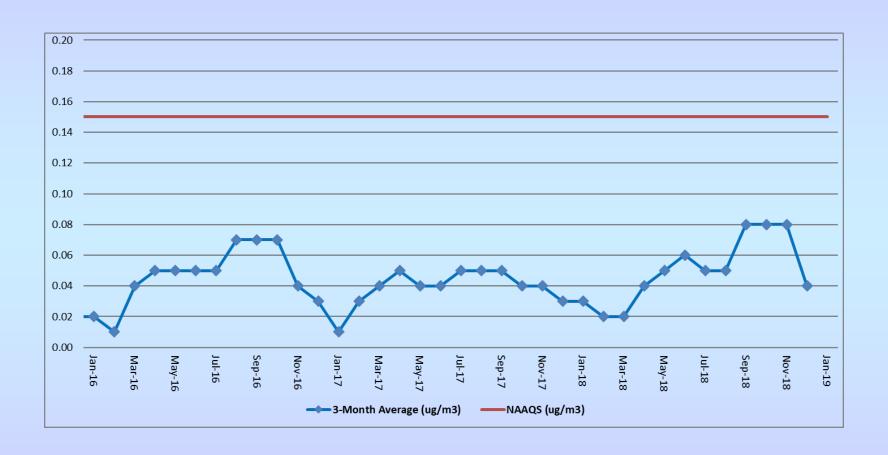

Iowa Lead Design Value 2018 – Preliminary Until May 2019

County	City	EPA Site Id	Year	Highest Rolling 3-month Average Concentration (μg/m³)	3-year Maximum Rolling Average
Pottawattamie	Council Bluffs	19-155-0011	2016	0.07	
			2017	0.05	
			2018	0.08	0.08

(Three Year Averages Greater Than 0.15 μg/m³ Indicate Non-Attainment with the NAAQS)

Council Bluffs Lead, 3-Month Rolling Average: 2016-2018 (Concentration in µg/m³)
