

## Iowa Monitoring Locations and Design Values for Nitrogen Dioxide 2013-2015

A design value is a tool that can be used to understand pollution levels at a specific location. A design value may be set for any pollutant. The U.S. EPA's official definition is explained this way: "a design value is the mathematically determined pollutant concentration at a particular site that must be reduced to, or maintained at or below the National Ambient Air Quality Standard to assume attainment." The design value number tells us how a particular site or area compares with the National Ambient Air Quality Standards (NAAQS).

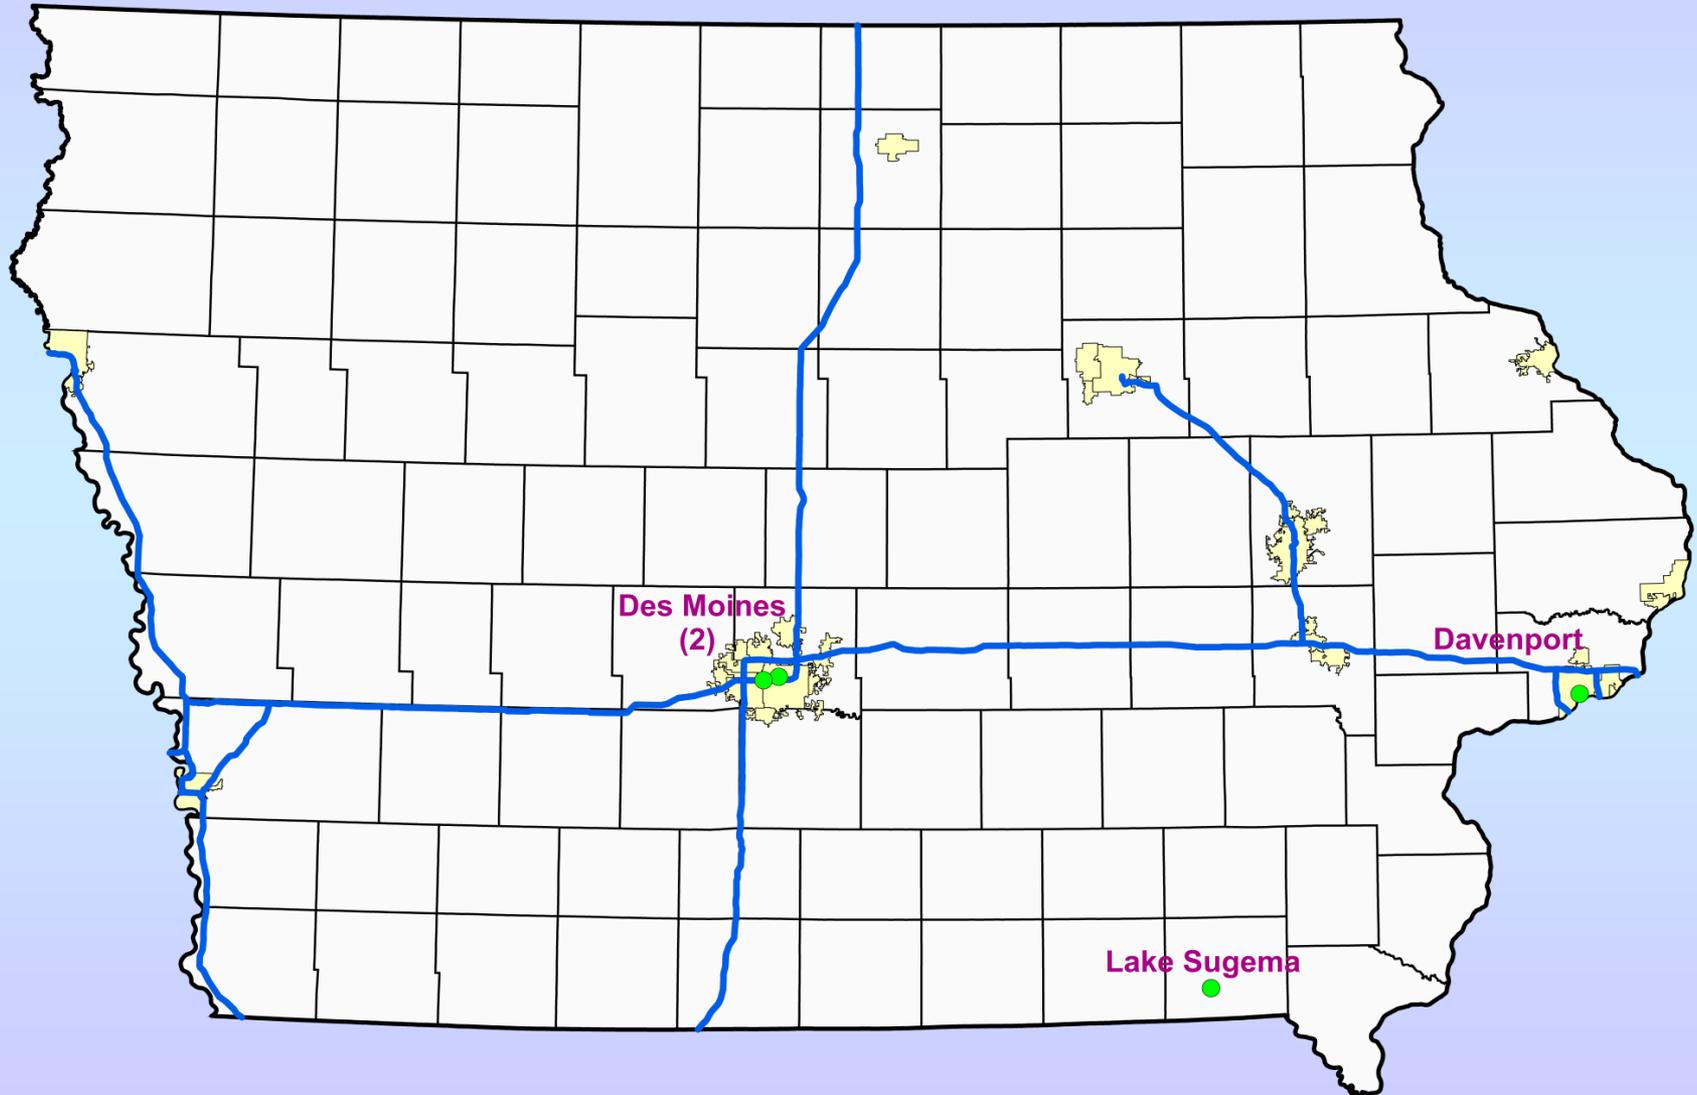

Iowa nitrogen dioxide (NO<sub>2</sub>) monitor location and information is detailed on the following pages. The EPA design value for 1-hour NO<sub>2</sub> is equal to the average of the 98th percentile 1-hour value for the most recent three years. EPA revised the NO<sub>2</sub> NAAQS in April of 2012. A monitoring site must have a design value less than 100 parts per billion to be considered "in attainment" with the NO<sub>2</sub> NAAQS. All monitoring sites in Iowa are in attainment with the 1-hour NO<sub>2</sub> NAAQS. Additional information on the revised NO<sub>2</sub> standard is available here: <http://www.epa.gov/airquality/nitrogenoxides/actions.html>

## Iowa NO<sub>2</sub> Monitors (2015)

AQS Site ID	Site Name	Location	County	Design Value?
19-153-0030	Health Department	Des Moines	Polk	Yes
19-153-6011	Rollins Near-Road	Des Moines	Polk	Yes
19-163-0015	Jefferson School	Davenport	Scott	Yes
19-177-0006	Lake Sugema	Keosauqua	Van Buren	Yes

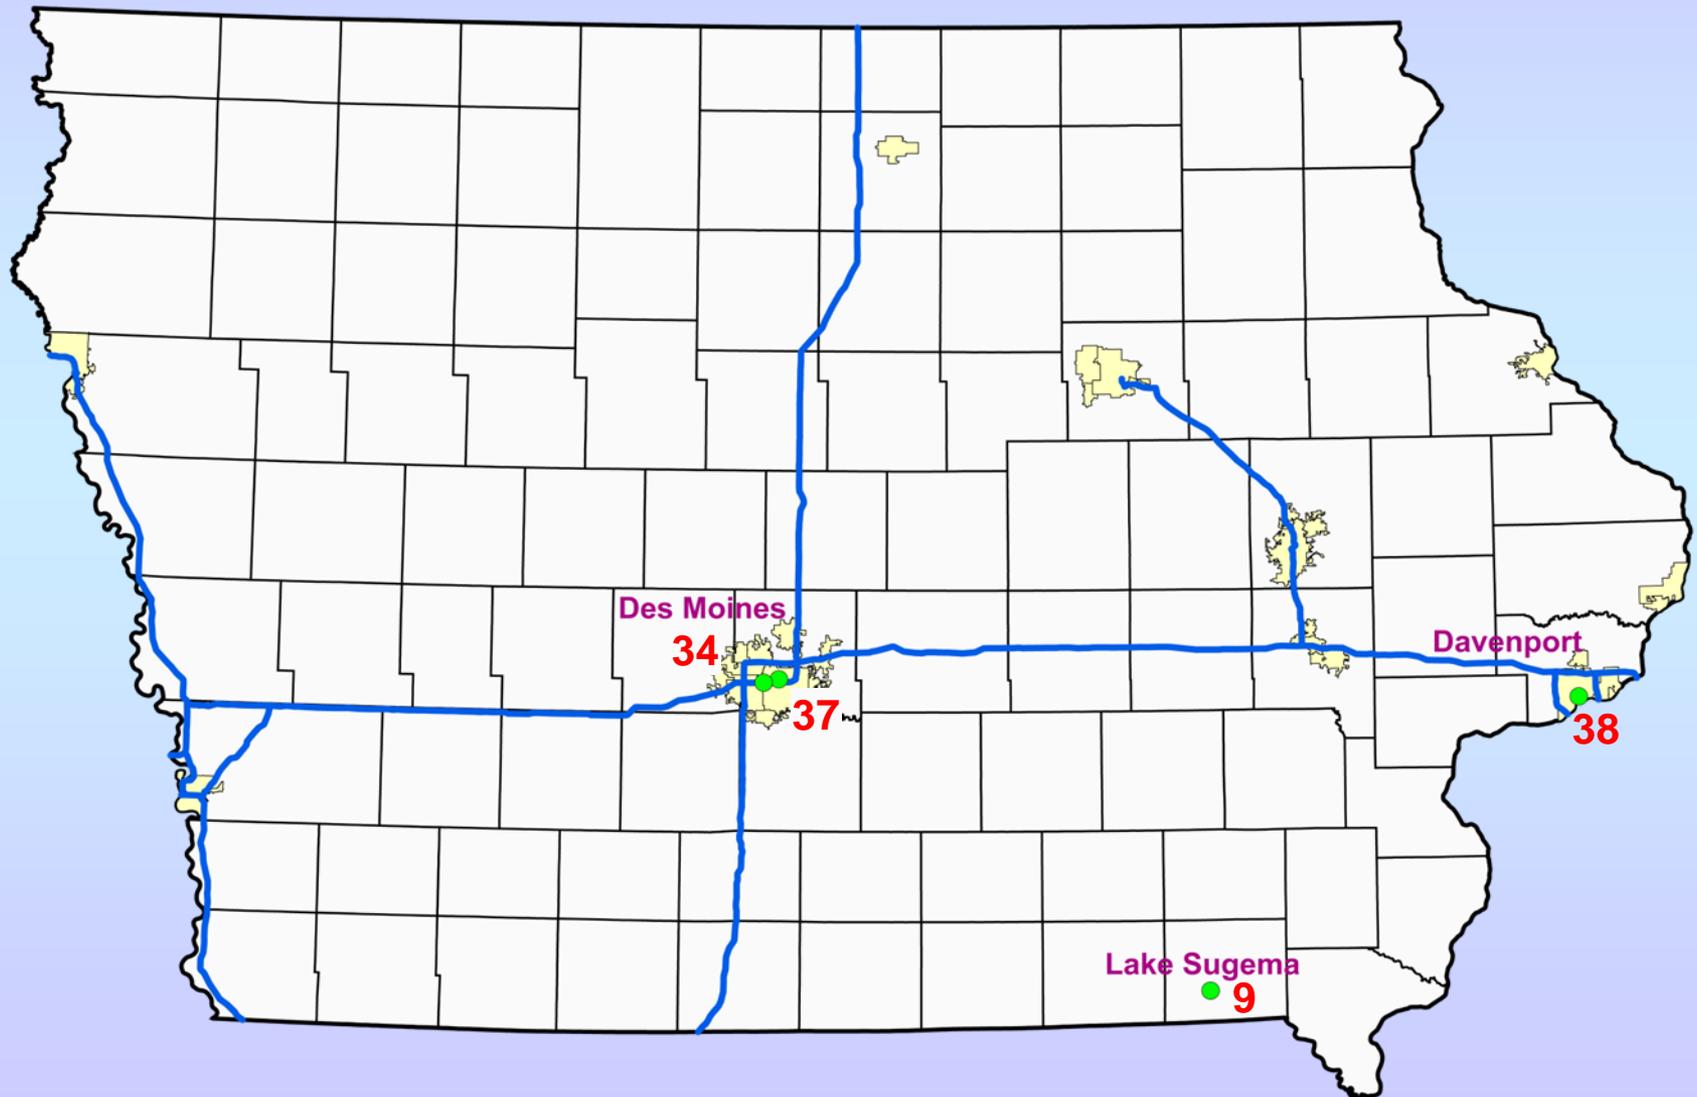

A site must be operational for at least three years to compute a design value and meet additional completeness requirements specified in [40 CFR 50 Appendix S](#).

Concentrations listed in ppb. Values greater than 100 exceed the standard.
