

Iowa DNR/Household Hazardous Materials

Material: Butane or Propane tanks

Potential Hazards: May contain trace amounts of explosive gases. Make sure the tanks are empty.

Recycle/Reuse: Home Depot, Lowes, Walgreens, and some service stations will recycle your old five-gallon barbecue tank when you purchase a new tank. Check with your local dealer for details. Larger containers over five gallons (barbecue size) should be exchanged at a propane supplier. For larger sizes, search the AmeriGas Cylinder Exchange locator online for nearby locations. Scrap metal yards will often accept smaller gas canisters less than two pounds (such as small green camping canisters) if the valves have been removed, and may also accept larger empty tanks.

Proper Disposal: Use this product up and then recycle it.
