

Work Plan Agreement 9/11/2013

Between

The Iowa Department of Natural Resources and the Environmental Protection Agency Region 7

Attached to this correspondence is the IDNR report, 2018 Annual Report For WORK PLAN AGREEMENT Between the Iowa Department of Natural Resources and the Environmental Protection Agency Region 7.

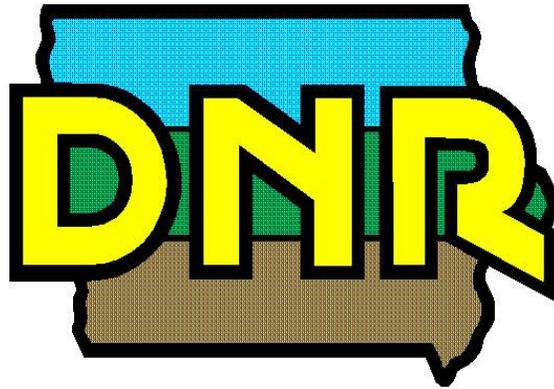

This report satisfies Objective 7, Item 2, of the Work Plan for 2018. Objective 7, Item 2, commits IDNR to keeping the EPA and the public up-to-date on IDNR's progress towards implementation of this Work Plan.

This report will be posted on IDNR's website.

Respectfully submitted to Region 7 on July 31, 2018

A handwritten signature in black ink that reads 'Edmund J. Zornay for'. The signature is written in a cursive style with a large, prominent 'E' and 'Z'.

Environmental Services Division

2018 Annual Report

For

WORK PLAN AGREEMENT

Between

**The Iowa Department of Natural Resources and the
Environmental Protection Agency Region 7**

July 31, 2018

Introduction

The Work Plan Agreement between the Iowa Department of Natural Resources (IDNR) and the Environmental Protection Agency Region 7 was created as a means to strengthen IDNR's implementation of the federally authorized National Pollutant Discharge Elimination System (NPDES) program. A petition for withdrawal of the NPDES program authorization was submitted to the EPA on September 20, 2007 by Iowa Citizens for Community Improvement, the Sierra Club, and the Environmental Integrity Project. As a result of the petition, EPA conducted a formal investigation of the petitioners' allegations. The investigation found a small number of deficiencies in Iowa's NPDES program for concentrated animal feeding operations (CAFOs). The Work Plan was negotiated to address those deficiencies over a five-year period and covers seven specific objectives as described in this report, the fifth of five scheduled annual reports.

All stated objectives and commitments in the Work Plan have been completed. IDNR believes these objectives have been implemented through a variety of means including development of Standard Operating Procedures (SOPs), standardized forms, checklists, tracking using existing databases, inspections including on-site and desktop evaluations, and an effective enforcement program. Several additional Animal Feeding Operation (AFO) staff, funded and authorized by the State of Iowa, were hired and received extensive training to perform inspections. Existing AFO staff and supervisors also received training regarding implementation of the Work Plan. As a result, producers across the state of Iowa can expect consistent inspections to determine their regulatory status.

Adoption of the federal regulations necessary to fully implement the NPDES permitting program for CAFOs that discharge to waters of the U.S. provides an additional layer of accountability for operations that choose to apply, or are required to apply, for an NPDES permit. The combination of state AFO requirements and the full complement of federal regulations puts Iowa in a strong regulatory position to implement the NPDES program.

The progress with implementation of Objectives 1-7 of the Work Plan will be discussed in detail in the remainder of this report.

Objective 1: Recommend promulgation of NPDES permitting regulations for confinement CAFOs that discharge to water of the U.S.

- 1. DNR intends to recommend to the Environmental Protection Commission (Commission) that the Commission incorporate by reference the federal regulations necessary to fully implement the NPDES permitting program for confinement CAFOs that discharge to waters of the U.S. Within 180 days of execution of this Work Plan or within 180 days of notification from Region 7 that the previously submitted list of regulations to be incorporated is correct, whichever occurs last, DNR will recommend action to promulgate the proposed rules in the Iowa Administrative Bulletin pursuant to Iowa Code Chapter 17A.*

- 2. DNR will recommend that the Commission adopt by reference the revised rules within one year of execution of this Work Plan.*

The language and rule reference was submitted to Region 7 on November 21, 2013 for approval.

At the Commission's meeting on March 18, 2014, the IDNR recommended that the Commission approve publication of a Notice of Intended Action (NOIA) to adopt by reference the federal regulations necessary to fully implement the NPDES permitting program for confinement CAFOs that discharge to waters of the U.S. By unanimous vote the Commission approved the NOIA. The NOIA was published in the Iowa Administrative Bulletin on April 16, 2014.

At the Commission's meeting on August 19, 2014, the IDNR recommended that the Commission adopt by reference the federal regulations necessary to fully implement the NPDES permitting program for confinement CAFOs that discharge to waters of the U.S. By unanimous vote the Commission adopted the amendments as proposed by the IDNR. The adopted amendments were published in the Iowa Administrative Bulletin on September 17, 2014, and became effective on October 22, 2014.

Objective 2: Recommend promulgation of Iowa regulations related to setback and separation distances so that they are equivalent to federal requirements.

- 1. DNR intends to recommend to the Commission that the Commission adopt by reference federal regulations that fully implement the NPDES permitting program with respect to land application setback and separation distances for open feedlot CAFOs. Within one year of execution of this Work Plan, DNR agrees to recommend adoption by reference of applicable regulations related to setback and separation distances for open feedlot CAFOs. DNR will recommend rulemaking as set forth in Paragraph 1 of Objective 1 above.*

At the Commission's meeting on March 18, 2014, the IDNR recommended that the Commission approve publication of a NOIA to adopt by reference the federal regulations necessary to fully implement the NPDES permitting program with respect to land application setback and separation distances for open feedlot CAFOs. By unanimous vote the Commission approved the NOIA. The NOIA was published in the Iowa Administrative Bulletin on April 16, 2014.

At the Commission's meeting on August 19, 2014, the IDNR recommended that the Commission adopt by reference the federal regulations necessary to fully implement the NPDES permitting program with respect to land application setback and separation distances for open feedlot CAFOs. By unanimous vote the Commission adopted the amendments as proposed by the IDNR. The adopted amendments were published in the Iowa Administrative Bulletin on September 17, 2014, and became effective on October 22, 2014.

Objectives #1 and #2 have been met. Dates are listed and rules became effective on October 22, 2014.

Objective 3: To revise DNR application forms and templates to meet the minimum federal requirements.

1. *Within 60 days of execution of this Work Plan, DNR agrees to revise its construction permit application to include the predictive modeling requirement associated with alternative technologies and to require the additional information needed to determine whether the CAFO discharges. The revised application will include a provision stating that alternative technologies require extensive monitoring and reporting conditions in any permit; in addition, an application for a permit does not guarantee that a permit will be granted or that any permit granted will be renewed.*

The construction permit application was revised to include the predictive modeling requirement on October 23, 2013. A provision was added to the construction permit application form, stating that alternative technologies systems require extensive monitoring and reporting in the NPDES permit. In addition, the form includes a statement that an application for a permit does not guarantee that a construction or NPDES permit will be granted or that any NPDES permit will be renewed.

2. *Within 60 days of execution of this Work Plan, DNR agrees to revise its nutrient management plan template to include manure application setback requirements.*

The nutrient management plan template was revised to include manure application setback requirements on October 21, 2013. Page 1 of the Nutrient Management Plan Form (under supporting information) states "For an animal feeding operation that is required to have an NPDES permit, these restrictions include setback requirements for land application of manure, litter and process wastewater as set forth in endnote 'cc' on page 9 of this form." Those requirements are detailed on page 9 of the Nutrient Management Plan Form.

Objective #3 was completed before the 2014 annual report and no changes were made to this item.

Objective 4: Compliance Evaluation and Inspections

A. To implement a comprehensive survey to identify AFOs that are CAFOs that discharge to waters of the U.S. and have failed to apply for NPDES permits.

1. *Within 30 days of execution of this Work Plan, DNR will establish a baseline inventory of all known large CAFOs and medium-sized AFOs in Iowa based upon up-to-date information contained in DNR's AFO database and provide this number to Region 7. Within 90 days of execution of this Work Plan, DNR will provide Region 7 a written plan to systematically locate and/or identify any unknown large CAFOs and medium-sized AFOs to supplement the baseline inventory. Private or personally identifiable information will not be included as part of these submittals.*

A baseline inventory from the IDNR's AFO database was established on September 19, 2013. This inventory was submitted to EPA Region 7 on October 10, 2013.

A written plan to systematically locate and/or identify unknown (unclassified) large CAFOs and medium-sized AFOs was developed by IDNR and submitted to EPA Region 7 on December 10, 2013. The plan is being implemented and the map search was completed July 31, 2017. The standard operating procedure for unknown AFOs is attached to this report (see MEMO – Unclassified AFO Search Process and Findings, dated February, 2018).

IDNR has identified 5,063 AFOs that needed further analysis to determine their regulatory status. As of July 31, 2018, 2,772 (54.8%) of the total (5,063) have been vetted. Preliminary review of the data from at least 3 of the 6 field offices has provided similar results, taking into account regional differences in the livestock industry. To better understand the vetting process of the unknown AFOs, additional categories have been tracked as the process is/was being conducted at the 6 field offices. These categories are summarized as follows:

- Small Animal Feeding Operations (SAFOs) – 1,445 facilities
- Medium AFOs – 501 facilities
- Medium AFOs needing a state-required MMP – 10 facilities
- Large CAFOs – 8
- Not an AFO – 134
- Closed AFO – 538
- Already part of an existing AFO - 136

The 519 AFOs identified as medium or large AFOs or CAFOs have been added to the database and IDNR inventory. A majority of these facilities met the federal definition of medium AFO (750 head of finisher swine, for example) but are considered a SAFO under Iowa law (1,250 head of finisher swine, for example). These facilities (between 300 AU and 500 AU) are being added to the IDNR AFO database as information is updated.

The vast majority (99.4%) of the facilities now classified (previously called unknown) are not regulated by state or federal law. Of the 18 facilities (10 needing state MMPs and 8 large CAFOs), various compliance tools (Administrative Order or Notice of Violation) are being utilized. Of the 8 large CAFOs identified in this process, all were found to be non-discharging CAFOs.

It is anticipated the majority of the vetting of the unknown facilities will be completed by the end of calendar year 2018, and the IDNR will provide an update to EPA upon completion.

2. *Within 5 years of the execution of this Work Plan, DNR shall perform a Comprehensive Survey of all large CAFOs and medium-sized AFOs that currently do not have NPDES permits to identify, independent of information supplied by regulated persons, CAFOs that discharge to a water of the U.S. and have failed to comply with NPDES permit application or other permit requirements. The Comprehensive Survey shall be performed pursuant to and consistent with the CWA CAFO portions of the IDNR Comprehensive Survey Standard Operating Procedure (SOP) which is attached to this Work Plan.*

The Comprehensive Survey Standard Operating Procedure (SOP), dated July 3, 2013, is being utilized. Comprehensive Surveys were conducted at large CAFOs and medium-sized AFOs in all regions of the state of Iowa. Further discussion of the inspections and evaluations of AFOs and CAFOs occurs in A.3. and A.4. below.

3. *DNR shall document for each facility the basis for its decision regarding the type of evaluation (on-site inspection or desktop evaluation) to be conducted.*

The DNR AFO Desktop Assessment Form was developed as a means of documentation regarding the type of evaluation to be conducted at all large CAFOs and medium-sized AFOs. The types of evaluations include on-site inspections, desktop assessments and equivalent on-site inspections previously conducted since November 1, 2011.

Documentation is provided on the Desktop Assessment Form for all large CAFOS and medium-sized AFOs regardless of the type of evaluation that is conducted. On-site inspections are required for all large CAFOs and some medium-sized AFOs depending on housing type (open lot or confinement), manure storage (covered or uncovered), and distance to watercourses. Additional factors include compliance history factors which consider spills to waters of the U.S., releases of manure, and legitimate and documented complaints against the facility.

4. *DNR agrees to perform approximately 20% of these evaluations annually.*

AFO WORKPLAN REPORT 7-1-13 to 7-23-18	Total
Total baseline confinements inventory*	7,943
Total baseline open lots inventory*	1,454
NPDES permit inventory	170
Combined facilities (open lot and confinement)	720
* IDNR notes that the original baseline is likely higher than the actual number due to combined AFO facilities (open lot and confinement) being counted twice in the baseline and counting a facility with multiple facility numbers more than once. Data steward corrections have since merged duplicate facility records to improve database report accuracy.	
Desktop assessments performed	8,001
On-site inspections performed	4,369
Return on-site visits performed	252
Unknown facilities identified	519
Equivalent inspection (since 11/1/2011)	76

Total Confinements Inventory = actual recorded in database medium-sized AFO status or above

Total Open Lots Inventory = actual recorded in database medium-sized AFO status or above

NPDES Permit Inventory = actual AFOs with NPDES permits in database, including newly issued permits

Combined Facilities Inventory = actual recorded in database medium-sized AFO status or above with a combination of open lots and confinement facilities

Desktop Assessments Performed = in office determination using publically available mapping services

On-site Inspections Performed = at the facility inspection

Return On-site Visits Performed = follow up inspection to verify status or updates

Unknown facilities Identified = verified that they are medium-sized or larger AFOs which were not in the AFO database

Equivalent Inspection = a substantially equivalent on-site inspection conducted since 11/1/11

All facilities, whether or not on-site inspections are conducted, received desktop evaluations, except NPDES permitted facilities. As of July 22, 2018, a total of 8,001 desktop assessments were completed. In addition, IDNR conducted 4,369 on-site inspections and 252 return on-site visits. 76 additional facilities were determined to have had an equivalent on-site inspection since November 1, 2011.

IDNR has determined that all facilities in the baseline inventory have had an evaluation (on-site inspection or desktop evaluation) required under the Work Plan.

IDNR agreed to conduct approximately 20% of these evaluations annually. IDNR has met the requirements in Objective #4.

B. To perform appropriate CWA NPDES compliance evaluation inspections at NPDES permitted CAFOs.

- 1. DNR agrees to perform CWA/NPDES inspections at all NPDES permitted CAFOs in Iowa within 5 years of execution of this Work Plan, and to complete approximately 20% of these inspections annually, in accordance with the prioritization established in Paragraph 2 below. The CWA/NPDES inspections shall be conducted pursuant to and consistent with the CWA CAFO portions of the IDNR Concentrated Animal Feeding Operation NPDES On-Site Inspection SOP.*

The DNR Concentrated Animal Feeding Operation NPDES On-Site Inspection SOP was developed in conjunction with development of other inspection procedures as a result of the Work Plan. Components of the inspection procedure were in place prior to the development of

the Work Plan. The NPDES inspection procedure established uniform statewide procedures for inspections of permitted CAFOs. In addition, a statewide inspection form template was also developed and implemented on a statewide basis. As of July 20, 2018, IDNR has 170 active NPDES permits. IDNR is on schedule to complete all NPDES CAFO inspections within a 5 year period.

Current IDNR protocol is to inspect NPDES permitted open feedlots just prior to their permit expiration date. If any compliance issues are noted during the inspection, those items need to be resolved prior to reissuance of the permit. Also, inspections will be prioritized according to item #2, below, as those events occur.

- 2. DNR and Region 7 agree that it is appropriate to prioritize inspections of NPDES permitted facilities with spills or legally sufficient complaints as set forth in Iowa Code 459.601 or 567 IAC 65.113 (459A) that involve a water of the U.S.*

As spill reports or legally sufficient complaints are received by IDNR, those facilities will be scheduled for inspection. All NPDES permitted CAFOs will be inspected within 5 years from September 11, 2013 in accordance with this objective.

C. Resources and Training

- 1. Pursuant to Senate File 435 (2013), DNR received an increase of \$700,000 for its animal feeding operation program. This resulted in approximately 7 additional full-time staff from the previous fiscal year in order to conduct the evaluation and inspections required by this Work Plan. In the annual reports required pursuant to Section 7.2 of this Work Plan, DNR will provide an assessment as to whether it has sufficient resources to meet the requirements of this Work Plan, and if not, what additional resources are needed.*

The Iowa legislature re-appropriated the funding for SFY19.

The adequacy of staffing resources will be discussed in further detail (Objective 7.2) later in the report.

- 2. Within 180 days of execution of this Work Plan, DNR will develop a CAFO/NPDES training curriculum for all staff conducting NPDES evaluations and inspections at AFO/CAFOs. The curriculum will be completed by all existing AFO/CAFO inspectors and their field office supervisors within 270 days of execution of this Work Plan. New AFO/CAFO staff/inspectors will complete the curriculum within 3 months of their start date. The curriculum will cover state and federal CWA-related matters, including CAFO inspector training requirements for DNR inspectors. DNR shall develop and provide the training curriculum to Region 7 for review and comment within 180 days of execution of this Work Plan.*

The training curriculum was developed by a team of IDNR staff and management with guidance from EPA Region 7. The training team began meeting in October, 2013, and met approximately

every other week. The final training plan was developed and submitted to EPA Region 7 on December 17, 2013.

The CAFO NPDES Training Curriculum has been implemented for all AFO field staff and field office supervisors. In addition to the core training, new AFO staff must complete on-the-job training before conducting independent inspections. Several of the courses were videotaped for utilization by other IDNR staff, now and in the future.

All AFO staff and supervisors have been fully trained using the CAFO NPDES Training Curriculum. New AFO staff will receive the same training prior to conducting independent AFO inspections. In addition, each year, all AFO staff receive ongoing training for conducting inspections required by the Work Plan agreement to ensure statewide consistency.

AFO staff has received training for relevant issues regarding inspections, rules, data entry and maintaining consistency in AFO inspections, including vetting of unknown AFOs. Supervisors and support staff also attend the training sessions.

Statewide training of AFO staff was conducted in Ames, Iowa on February 20-21, 2018. Additional training was held at each field office location for AFO staff in the spring of 2018. A particular emphasis was made regarding the vetting of unknown AFOs and tracking and recording of those facilities in the AFO database and Field Office Compliance Database (FOCD).

Objective 5: Timely issue NPDES permits that meet federal requirements to all CAFOs that DNR determines discharge to waters of the U.S. and take timely and appropriate enforcement action if necessary.

- 1. In accordance with Objective 4, DNR agrees that upon completion of an evaluation of a CAFO operating without an NPDES permit, where DNR determines the CAFO is required to obtain an NPDES permit because it discharges to a water of the U.S., DNR will notify the CAFO within 60 days after completion of its evaluation and require the CAFO to either: submit an application for an NPDES permit to DNR within 90 days from the date of DNR's notification or longer if additional time is necessary; or immediately put in place interim remedial measures that eliminate the discharge to waters of the U.S. followed by permanent measures that eliminate the cause of the discharge to waters of the U.S. DNR may provide these notifications through commencement of an informal or formal action, depending on DNR's best judgment about what will bring the CAFO into compliance with the CWA. DNR agrees to track the CAFO's response and ensure that a permit application is submitted or discharge cause is clearly eliminated, relying on enforcement (or further enforcement) if necessary.*

From September 1, 2017 to August 1, 2018, IDNR issued 43 final NPDES permits. All permits during this period are renewals. Of the 43 renewals, all were for conventional operations and none are for Alternative Technologies (AT). Several large and medium CAFO facilities have chosen to initiate remedial measures to eliminate discharges, followed by permanent measures to remediate the cause of the discharge (see columns W & X in the attached spreadsheet).

These cases are being tracked by IDNR environmental specialists in the field offices utilizing the

IDNR's FOCD. Subsequent inspections by DNR field staff will ensure that any permanent remedies, including managerial changes, are maintained and implementation is ongoing.

Also, many of the facilities with reported discharges (column V in the attached spreadsheet), are medium AFOs or medium CAFOs as identified during the inspection. These are also being tracked and given several options, including obtaining NPDES permit coverage. Most are eliminating the discharge or removing man-made conveyances.

- 2. Within 180 days after receipt of each application for an NPDES permit submitted according to this Objective, DNR will complete a draft permit that contains facility-appropriate provisions designed to control all discharges from the CAFO in a manner consistent with federal effluent limitations for CAFOs. At the termination of the public comment period for each draft permit, and after consideration of all public comments received, DNR agrees to expeditiously issue a final permit for each such CAFO.*

It should be noted that several facilities may have chosen to voluntarily apply for, and receive, an NPDES permit in anticipation of the need to do so, either because of an impending inspection or recognition by the facility of the need to comply with NPDES discharge requirements. There are currently 170 total active NPDES permits.

Objective 6: To implement enforcement program that ensures penalties are sought in accordance with DNR's EMS and creates a stronger deterrent to noncompliance.

- 1. DNR agrees to carry out enforcement against CAFOs with illegal discharges to waters of the U.S. or NPDES permit violations in accord with its Enforcement Management Systems (EMS) manual. DNR will document the basis for enforcement response decisions. When seeking administrative penalties, DNR agrees to assess the actual or reasonably estimated economic benefit in accordance with 567 IAC 10.3(2) and the EMS manual, including both delayed and avoided cost of compliance. In specific cases where DNR does not seek or recover full economic benefit, DNR will document the case-specific rationale and/or mitigating factors supporting DNR's decision to not seek full economic benefit. DNR will also document mitigating factors used for the non-economic benefit component of assessed penalties.*

From July 25, 2017 to June 13, 2018 IDNR finalized 12 administrative actions issued to producers with unauthorized discharges. There were no orders against NPDES permit holders and no referrals to the Attorney General.

In an effort to assist the field office personnel in determining the appropriate enforcement action, an Enforcement Checklist was created and is being utilized. This checklist has been implemented in each AFO inspection or complaint. The checklist provides a list of possible IDNR compliance options including, but not limited to, Notice of Violation letters and Administrative Orders, and it documents IDNR's decision in each case. The checklist helps ensure that enforcement is consistent with IDNR's EMS manual.

If violations are referred for administrative penalty, IDNR includes the delayed and avoided cost of compliance in the referral document as well as in the administrative action. If IDNR does not seek or collect the full amount of the economic benefit, the IDNR documents the determination in the Penalty Calculation and Settlement Forms which are placed in the file.

- 2. DNR agrees to develop checklists necessary to ensure consistent and appropriate enforcement responses by enforcement staff within 60 days of execution of this Work Plan.*

As stated above, the IDNR developed an Enforcement Checklist for field inspectors to use when conducting inspections or visits. This checklist is used by all field offices in the state and assists in ensuring consistent and appropriate enforcement. The Enforcement Checklist was submitted to the EPA on November 8, 2013.

- 3. DNR agrees to complete any required staff training on its revised EMS and penalty calculations within 120 days of execution of this Work Plan.*

On January 6, 2014, the IDNR Legal Services Bureau conducted a six-hour training course for all field office inspectors and supervisors. The class explored federal and state regulations, court decisions and the enforcement process, including but not limited to the EMS and penalty calculations. The class was recorded and disks of the training are in each of the field offices for staff who were unable to attend the training or for new staff. Documentation of the training, including the training agenda was submitted to the EPA on January 7, 2014.

This training also satisfies a portion of Objective 4, Item C.2. Compliance Evaluation and Inspections – Resources and Training.

Objective 7: To keep the EPA and the public up-to-date on DNR's progress towards implementation of the Work Plan.

- 1. DNR agrees to provide progress reports on its progress with implementing Objectives 1-6 of the Work Plan within 90 days, 210 days and one year from the date of execution of this Work Plan. Progress reports will be posted on the DNR's website.*

90-day and 210-day progress reports were submitted to the EPA and posted on the IDNR's website within the required time frames. The 2014 annual report was submitted September 11, 2014, one year from the signed agreement, per discussion with EPA Region 7. Subsequent reports have been submitted by August 1 of each year. The 2016 and 2017 annual reports were posted on IDNR's website. The 2018 annual report will be posted on the IDNR website.

- 2. Beginning in 2014 and ending in FFY 2019, DNR agrees to submit an annual report by August 1 of each year that summarizes all relevant results associated with DNR's implementation of this Work Plan. In the annual report, if DNR has not met the 20% annual evaluation requirement discussed above, DNR agrees to reassess available resources and progress towards meeting the Work Plan's requirements. The annual report will be posted on DNR's website.*

This submittal satisfies the 2018 annual (and final) report requirement. The 20% annual evaluation requirement is discussed at length in Objective 4, Item A.4., above. Staffing levels have been sufficient to carry out the responsibilities of the Work Plan. Funding was re-allocated by the 2018 Iowa legislative session to maintain the staffing level originally proposed by IDNR. As the Work Plan is completed, IDNR is evaluating program priorities to maintain a responsive, sufficient and sustainable state AFO program in future years.

Summary

The Work Plan Agreement between IDNR and EPA Region 7 was signed on September 11, 2013. Since then, significant progress has been made to strengthen Iowa's implementation of the federally authorized NPDES program. Work Plan objectives 1 through 7 were implemented in a timely manner and summarized below:

- Work Plan objectives #1 and #2, regarding permitting and setback regulations were completed as the Commission adopted the amendments as proposed by the IDNR at its August 19, 2014 meeting. The adopted amendments were published in the Iowa Administrative Bulletin on September 17, 2014, and became effective on October 22, 2014.
- Work Plan objective #3 required the construction permit application form and nutrient management plan form be modified to include a predictive modeling requirement and federal setback requirements for manure application. These were completed on October 23, 2013, and October 21, 2013, respectively.
- Objective #4 requires comprehensive surveys and evaluations at all large CAFOs and medium-sized AFOs in Iowa along with staff training and development. Objective #4 is complete as of July 31, 2018.
- Objective #5 requires the IDNR to timely issue NPDES permits to all CAFOs that IDNR determines to discharge. This objective is complete and ongoing.
- Objective #6 requires IDNR to implement an enforcement program consistent with IDNR's EMS. This objective has been met with enforcement and compliance being a priority.
- Objective #7 requires IDNR to keep the EPA and the public up-to-date on IDNR's progress toward implementation of the Work Plan. Progress reports and the 2014, 2015, 2016, and 2017 annual reports were posted on IDNR's website as required. This (2018) annual report will be posted on the IDNR website in the near future.

Conclusion

All major objectives and requirements of the Work Plan have been completed on time and as agreed in the Work Plan between IDNR and EPA. As of July 31, 2018 inspections (desktop and/or on-site) of facilities were completed. Vetting of unknown facilities is over 50% complete with a plan to be done by the end of calendar year 2018. IDNR will send EPA its final report on classifying the unknown (unclassified) facilities. To date, fewer than 1% of AFO unknown facilities were found to be regulated by state or federal law. Instances of non-compliance received appropriate enforcement action.

This is the fourth year using the spreadsheet that more fully explains and documents completed AFO evaluations (see Appendix A). Details include, but are not limited to, facility ID number, type of inspection, size of facility, documented discharges and enforcement action (if any).

The five-year period of the Work Plan officially ends on September 10, 2018. This is the last of five required annual reports.

MEMO

TO: AFO Coordination Team
FROM: Field Services Compliance Bureau
RE: Unclassified AFO Search Process and Findings
DATE: February 2018

The Iowa Department of Natural Resources (DNR) and the U.S Environmental Protection Agency Region 7 via work plan Objective 4 – Compliance Evaluation and Inspections created a plan to locate unclassified large CAFOs and medium-sized animal feeding operations (AFO) within the State. Each field office was tasked with identifying those potential unclassified facilities within the respective bureau regions. The purpose of this memo is to showcase the steps taken to complete this task.

Step 1 – Identifying Unclassified Facilities

First, field staff checked the DNR's databases, e.g., the AFO database and the Field Office Compliance Database (FOCD), to ensure the site was not already within DNR records.

Then, available public mapping tools were used, including AFO Siting Atlas, Google and Bing maps, to identify the most current aerial coverage, specifically, whether a site existed, had expanded, closed, or was now inactive. Also, the aerial map search was used to record potential unclassified AFOs on a section map, document potential ownership, and prioritize according to potential size. Last, other considerations gained from the aerial search included identifying nearby water sources and already classified (and nearby) facilities.

Considerations when identifying unclassified facilities included: highlighting certain map layers for consistency, looking for open lots (300 AU or greater) (bare/brown areas) and confinements (300 AU or greater). A facility's capacity could be measured by using the measuring tools on the AFO siting atlas. For example, field staff found a hog confinement building has approximately 10 square feet per head versus a 300 head open lot, which is larger than 1.5 acres or about 1 head of cattle per 1 to 1.5 feet of feed bunk. Field staff also searched for rectangular or square framed buildings with feeding systems and ventilation fans, or uncovered manure storage. Field staff noted that hoop buildings and cattle confinements are a little more difficult to identify because they do not have external structures. As such, the Bing search engine was used to gain an angled view (rather than the flat model, bird's eye view of traditional mapping tools).

Step 2 – Documenting Potential Unclassified AFOs

Field staff used several methods to document potential unclassified AFOs, including, plat maps, aerial photographs, or an excel spreadsheet listing each township within each county, alphabetically, to record findings. Specific to the plat maps and aerial photographs, when an open lot or confinement was identified, a dot, or marker, was added to document the location on the map or photo. Specific to the excel spreadsheet, when an open lot or confinement was identified, the information was added to the appropriate county and township. If a facility was "questionable" (possibly less than 300 AU), it was still recorded, but a comment was made for a return look at the facility.

Step 3 – Identifying and Contacting the Facility Owner.

When the aerial search was complete, various resources were used to identify the appropriate owner, including the Iowa Secretary of State, County Records and Assessors' Offices, GIS Beacon Search online databases, online

white pages and switchboards. Staff used the already-existing Contact Owner Information Form to collect and record 1) the owner and 2) information required for a new entry into the AFO database.

Staff also tried phoning the owner. If unsuccessful, field staff either sent letters to the owner or physically visited the facility. Letters sent were intended to confirm whether an AFO existed and, if it did, to gather site address information, including owner name, address, type of facility, and number of animals, (essentially, similar to information gathered using a desktop assessment form in a Letter of Inquiry format). Example letters are enclosed. If a visit was warranted, field staff tried to confirm ownership and existence of an AFO in person. However, if the property owner was not home, some field staff left a door hanger, which identified why the DNR official visited the property and a request to contact the DNR.

Step 4. Evaluating Information Obtained from Facility Owner & Recording in DNR Databases

Based on information collected via Steps 1 -3, field staff would record the newly discovered AFO in a DNR database. As the bureau continues this unclassified facilities search, all unclassified facilities will eventually be entered in the AFO Database and the FOCD as an Incoming Report "AFO site found by DNR Staffer."

If the site had been closed, demolished, or deemed inactive, it was also noted.

Step 5. Conducting an Inspection

If the site is a **large** CAFO identified per EPA definitions:

- An on-site inspection was scheduled to be conducted;
- No Desktop Assessment was completed;
- Field staff work was recorded per usual in the FOCD as an Incoming Report, specifically, AFO Work Plan Unclassified Inspection and the facility was marked as having an earthen basin, if applicable.

If the site is a **medium** AFO identified per EPA definitions:

- An on-site inspection was scheduled to be conducted if facility was an open lot;
- No Desktop Assessment Form was completed;
- Field staff work was recorded per usual in the FOCD as an Incoming Report, specifically, AFO Work Plan Unclassified Inspection and the facility was marked as having an earthen basin, if applicable.

If the site is a **small** AFO identified per EPA definitions:

- The facility was noted on the plat sheet and aerial photo;
- No entry into the FOCD, unless there is an earthen basin. If an earthen basin exists, then the AFO is entered into the FOCD as an Incoming Report "AFO site found by DNR Staffer."

56253	AFO Facility Inspection	Alison Manz	06/11/2015	NOV	06/17/2015	Yes	06/16/2015	No	Yes	Yes	The pen closest to the road where manure was flowing from the sediment basin into the roadside ditch has been eliminated. He is working on getting the pen seeded now. There is still one small receiving pen that drains into this pen. I advised owner that the small receiving pen should be directed south, into the row crop field, until vegetation is established in the eliminated pen. Owner also stated that after the crops are out this year he will be looking into constructing a lagoon to contain all feedlot runoff. I advised Mr. Roane that as long as he stays under 1,000 head and constructs the containment basin, a permit is not required.		
56254	AFO Facility Inspection	Wendy Wittrock	06/23/2016	Letter of Non-Compliance	07/12/2016	Yes		No	No		Onsite inspection completed. A follow up will be required for this facility. A suspense date of September 1, 2016 set for producer to notify FO4 of intentions to ensure ongoing compliance with regards to being a medium CAFO.

56468	AFO Facility Inspection	Jeremy Klatt	08/21/2015	NOV	08/21/2015	Yes	05/25/2018	No	Yes	Yes	Visited facility and spoke with owner about the planned improvements to prevent a discharge to the small creek on his property. He indicated that the concrete crew was planning to be on-site in the next few weeks to complete the planned improvements. I asked owner to notify me when the improvements are completed. The site only had about 100 head of cattle at the time of the inspection. The pen where the improvements are needed was empty at the time of inspection.

56505	AFO Facility Inspection (Combined Facility)	Jeremy Klatt	05/05/2015		06/08/2015	Yes	09/20/2017	No	Yes	No	Owner reported that the facility had begun regularly pumping out the settling tank to prevent a discharge to the field tile but admitted that there was no way to monitor or verify that a discharge did not occur if the tank didn't get pumped. We discussed cutting and plugging the tile to eliminate any possibility of a discharge. The owner indicated that he would cut the tile just after the settling tank and that he would document the process and send photographs.		
56506	AFO NPDES Permit Inspection	Lois Benson	04/22/2015			No							
56507	AFO Facility Inspection	Dan Weber	06/25/2018			No		No	No		No action had been taken regarding the water supply discharge issue as owner reported that he had talked to a plumber who had completed work on the water supply and the plumber believed that the appropriate backflow prevention had been installed. I further conferred with Scott Wilson, with this office, and also Russell Tell, the DNR's private well expert and both agreed that the current configuration does not meet the law regarding the matter.

AFO #	Inspection Type	Inspection Staff	Inspection Date	Severity	Date of Enforcement Letter	Followup Required	Followup Date	All Production Area Controlled	Evidence Of Discharge	Perm Remedy Completed	Remedy	Penalty	Fish Kill Restitution
56579	AFO Facility Inspection	Brandon Miner	09/23/2015			Yes	08/31/2016	No	Yes	Yes	Construction of runoff controls complete with the exception of placing the pump in the north settling basin and seeding the newly created VTA. A dirt berm will prevent runoff from flowing from the VTA to the road ditch.		
56580	AFO Facility Inspection (Combined Facility)	Jennifer Christian	07/29/2014			Yes	04/30/2015	No	Yes	Yes	The owners hired P.E. Nic Rowe to design a berm to control the runoff from the west lot. There is a gated outlet that can manually let effluent out at a controlled rate for it to soak into the pasture. They are still claiming no discharge.

56593	AFO Facility Inspection	Don Cunningham	09/15/2015			No	02/01/2018	No	Yes	Yes	Stopped by this site to follow up on plan of action submitted by owner in 2015. The berm has been extended as the plan indicated. During a follow up phone call with the owner, he indicated the berm was extended in 2016 and seems to be working very well but he indicated he may extend it further west to provide more protection. Remedy completed.

56755	AFO Facility Inspection	Bryan Bunton	06/02/2014	Deficiency	06/02/2014	Yes	07/08/2016	No	Yes	Yes	New fencing has been installed along the south portion of the pen. The fence is approximately 100 feet farther north than its prior location. The area south of the pen has been groomed and reseeded, and vegetation is starting to grow. There was no sign of any runoff from the pen. This area of concern has been properly addressed.

56976	3	No Desktop Required	NA	NA	No	Wastewater	Cattle Beef Finishing	6000	6056976	ACTIVE		Mr. Groeneweg was irrigating from his holding basin and had checked the pumps/hose at 9 p.m. on 10/15 and it was fine. He checked again at 11 p.m. and a clamp holding the hose had blown off and manure was being released to his property, which flows down a ditch and 1.5 miles to any creek or tile intake. Several clean tile lines also dump into this ditch for dilution. Pump was shut off, manure scraped up and land applied. Bales placed to slow down any contaminated water flow.

57101	AFO Facility Inspection	Brandon Miner	10/04/2013			Yes	09/08/2015	No	Yes	Yes	Owner called and said that construction was complete and asked that DNR visit the site. Confinement was complete. A dirt berm is in place to the east of the feed storage area to contain runoff. The waterway/unnamed tributary was tiled and seeded to grass. The tributary now begins greater than 500 feet to the northeast of the confinement building - where the tile line(s) surface. It appeared that runoff from the facility was contained. Owner also said he plans to permanently depopulate the east feedlot pens.

57252	AFO Facility Inspection (Combined Facility)	Jeremy Klatt	08/06/2015		08/17/2015	Yes	04/18/2017	No	Yes	Yes	No discharge has been noted from this facility to two surface tile intakes that are in close vicinity to the feedlots. On the west side of the road, a runoff retention basin has been constructed since my workplan visit in 2015. On the east side of the road, feedlot runoff was not flowing to the intake, but onto the neighbor's field. There is currently no action required of the operation, though I did recommend that they improve runoff controls on the east side of the road. I have marked this facility as 'permanent remedy completed' as there is no need to return to the site, unless prompted by a complaint or future routine visit.

57277	AFO Facility Inspection	Dan Olson	03/01/2016	Letter of Non-Compliance	03/31/2016	Yes		No	No		The west SSB effluent enters a road tube under 230th Street and flows toward Henchal Creek. The flow has caused channelization and most likely runoff would reach the creek. This facility would be a medium CAFO if a discharge occurs.

57986	4	AFO NPDES Desktop Compliance Review	Dan Weber	11/16/2015	Yes	AFO - Confinement	Swine Grow to Finish	3300			Spills #111415-HJV-0753	Possible vandalism - the cap from a slurry store was removed. Nearest water is ~1 mile to tributary of Buck Creek via drainage ditch. Release stopped when discovered. Earthen berms constructed onsite and in road ditch. County road will oversee cleanup. Sampled drainage ditch upstream, at road ditch runoff to ditch, and downstream. Waste influence from pastured cattle & wildlife likely influence downstream sample, possibly upstream too.

58305	2	AFO NPDES Desktop Compliance Review	Trent Lambert	07/09/2015	Yes	AFO - Confinement	Swine Grow to Finish	4143			Spills #030510-TRL-1344	Pulled pit plugs but drainage line to outside, formed storage tank was frozen/plugged, causing manure to flow out of standpipe onto ground. Manure then flowed over ground surface to tile intake and ultimately into creek. Leak was stopped by putting pit plugs back in. Sump was excavated to collect manure runoff. Chopper pump and hose was used to pump collected manure back to manure storage pit. Tile intake was plugged to eliminate discharge to creek. Ground surrounding tile intake and along flowpath was scraped to remove manure.

58896	3	AFO NPDES Desktop Compliance Review	Ben Shuberg	04/14/2015	Yes	AFO - Confinement	Swine Grow to Finish	2000			Spills #050515-DAK-1802	Plugs were removed from one of two hog confinement buildings to allow manure to flow by gravity into a (common) concrete riser tile located between the confinement buildings. From this riser tile structure, manure is allowed to flow by gravity into the adjacent and to the west earthen lagoon manure storage structure. During this manure transfer, the line to the lagoon became plugged and a manure blowout occurred along the outside of the riser tile structure allowing manure to be released/spilled onto the ground surface. It was estimated that 14,000 gallons of manure was released and that manure flowed by gravity across the ground surface and pooled near a tile intake located near the southeast corner of the southern confinement building. From here, some of the hog manure entered into a tile intake, which was subsequently learned to outlet to the surface water of an unnamed tributary of the Floyd River which begins at a box culvert on a gravel road located 1/2 mile south of this facility (on 250th Street). 05/05/15 - Marra contacts Knoll about an hour from the initial notification advising that the tile intake believed draining into a water way, actually drains into the box culvert located 1/2 mile south on 250th Street. Marra advised that he contacted a manure pumping company to assist with managing the manure release/cleanup efforts. Kruse blocks the intake tile located where the pooled manure was located. Kruse puts three round bales in the unnamed tributary to about 1/8 mile downstream of the box culvert on 250th street. And Kruse begins pumping water on the upstream side in unnamed tributary back into the earthen lagoon at about 22:00 hours. Kruse indicates

58976	5	AFO NPDES Desktop Compliance Review	Jeff Theobald	11/22/2016	No	AFO - Confinement	Swine Grow to Finish	3600			Spills #100715-WDG-1505	They were filling manure application tanks with a tank loading system that is remotely operated from inside the cab of the tractor. The chute/opening for the overhead loader did not close completely and the tractor operator was not aware the chute was still open. The pump was running at idle speed and manure came out of the loader (at a slow pumping rate) between loads; ~ 10 minutes. By the time they came up for the next load ~ 3,000 gallons had been pumped onto the ground between the two buildings. Some of the manure ran north and went down-hill in a northwest direction to the creek. There was also manure pooled up between the buildings and on the drive area. FO5 arrived at the site at 6:00 PM. Went to the dammed area where they were pumping manure into the tank wagons. measured up to 3.0 mg/L (ppm) however the concentration was higher than the capability of the kit (>3.0 mg/L). On the downstream side of the dam 1.6 mg/L. It appeared they had for the most part stopped the manure spill before it went further downstream. FO5 did not observe any dead fish however since it was getting dark it was not possible to do a thorough investigation. FO5 returning to the site on 10/8/15 to investigate creek.

59089	2	AFO NPDES Desktop Compliance Review	Jeremy Klatt	09/11/2014	Yes	AFO - Confinement	Swine Grow to Finish	4800			Spills #080411-JGK-1445	Manure was transferred from a nearby facility to this facility from 8/1/11 - 8/3/11. The outdoor concrete tank developed a leak. Manure left the tank, entered a tile line, and eventually a creek. The tile was found after trenching around the tank. The tile was cut and plugged. Manure is being removed from the tank in order to repair the leak.

The pump moved manure from one lagoon to another, causing the second lagoon to overflow into a nearby creek. Fish kill occurred. Manure traveled to a grassed waterway and into a nearby creek. Facility built an earthen dam to stop flow. Facility pumped excess manure from overtopped lagoon into another lagoon.

59314	1	AFO NPDES Desktop Compliance Review	Chris Gelner	12/16/2016	Yes	AFO - Confinement	Swine Grow to Finish	3600			Spills #092815-SJM-1019	Mr. Frye's three hog confinement manure pits were getting full, so on approximately 9/18/15 he pumped some of the manure out of them to adjacent fields with standing corn. The fields were tiled and the tiles outletted to Pine Creek. In addition, on the day of my investigation I observed manure flowing out of the westernmost building through a pit fan. This manure flowed over ground to a waterway and to Pine Creek. Mr. Frye called Burco manure pumpers to pump out the overflowing pit and land apply the manure on a nearby field owned by Frye. He also scraped the waterway and placed wood chips on the liquid manure as an absorbent. At the stream he placed a dike to contain the discharge from the tile outlets and put a pump in the containment with a hose to a field across the stream. The amount of discharge from each of the two outlets was no more than 1 gpm.

59394	6	AFO NPDES Desktop Compliance Review	Josh Sobaski	08/27/2013	Yes	AFO - Confinement	Swine Grow to Finish	5000			Spills #111409-B1L-1452	Anonymous call questioned surface/irrigation land application of manure. Manure appeared to be pooled in the waterway leading to a tributary to Dirty Face Creek. Upon arrival minimal surface runoff was observed, but both tile lines that discharged to the concrete box culvert were discharging dark brown liquid. I collected samples and contacted owner and informed him that irrigation needed to stop. Creek tributary was dammed up and pooled liquid was pumped off to a wagon and land applied. Took field samples of both tile discharges on 11/15 and no hits of ammonia were detected. Discharges were clean and I did not detect any odor. I informed owner that the dammed water needs to be pumped off and then the dam could be opened up. An estimate of total pumped gallons was requested. I also field tested Dirty Face Creek on 11/14 about 1 mile downstream and did not detect and noticeable impact. Also observed creek on 11/15 at multiple points downstream and did not observe any noticeable impact.

59895	4	AFO NPDES Desktop Compliance Review	Wendy Wittrock	01/21/2016	Yes	AFO - Confinement	Swine Wean to Finish	3200			Spills #042815-DJW-0850	Water supply pipe broke sometime in the night filling shallow manure pit until it overflowed. A small amount reached a culvert leading to an unnamed tributary of the East Nishnabotna River. Discharge was stopped by shutting off the water and pumping the water from the shallow pit to the facilities manure storage lagoon. The ditch was blocked and liquid was pumped and land applied until water in the ditch showed no signs of ammonia.

59964	3	AFO NPDES Desktop Compliance Review (Combined Facility)	Lois Benson	04/25/2014	Yes	AFO - Open Feedlot, AFO - Confinement	Cattle Dairy Holstein/Cattle Dairy Holstein/Cattle Dairy Holstein	2850/350/700			Spills #070115-CAM-1130	Allen Feuerhelm called at 11:30 to report a manure release at Plymouth Dairy located in Stanton 9, Plymouth Co. There was an accident in Merrill about 4 a.m. that knocked out electricity. At 6:30 a.m. Allen started up the flume pump and went to milk cows. At 7:15 a.m. he discovered that manure was flowing around the lagoon, not into it, so he assumes the line got plugged with sand. He shut the pump off and has dammed the creek in 3 places. He reported that the creek is too shallow to pump out or scrape out and there are no fish present in this creek. He looked downstream of the dam and the water is clear.

60047	AFO Facility Inspection	Bryan Bunton	10/01/2014	Deficiency	01/02/2015	Yes	07/17/2017	No	Yes	Yes	Conducted a follow-up inspection on 7/17/17. A ditch holding a new tiling system has been installed along the perimeter of the anaerobic lagoons at the appropriate depth that serves to capture the water that was previously discharging from the north tile outlet. Water is now diverted to a newly installed lift station that pumps the water into a holding tank which provides drinking water to the animals. With the completion of this project all items outlined in the inspection report have been properly addressed.		
60048	AFO Facility Inspection	Bryan Bunton	06/02/2014	Deficiency	06/02/2014	Yes	07/08/2016	No	Yes	Yes	New fencing has been installed along the south portion of the pen. The fence is approximately 100 feet farther north than its prior location. The area south of the pen has been groomed and reseeded, and vegetation is starting to grow. There was no sign of any runoff from the pen. This area of concern has been properly addressed.

Unknown tile line along the berm of the basin started leaking manure which entered a unnamed tributary to Sewer Creek causing a fish kill. Mr. Van Loon plugged the tile line near the basin, dammed the creek and pumped until ammonia levels returned to normal.

60404	3	No Desktop Required	NA	NA	No	Wastewater	Cattle Beef Finishing/Cattle Beef Finishing	2500/9000	8460404	ACTIVE	Spills #080210-AHB-1042	Heavy rains caused settling pond to overflow for about 20 minutes. The settling pond receives water from the feed lot and the alleys between barns. The manure water mix from the settling pond flowed to a intermittent tributary of 6 Mile Creek. Normally the tributary is dry, however with recent rains the tributary is quite wide and flowing. For safety reasons facility staff were not able to check from impacts. After rains slowed system was able to catch up and stop overflowing.

60688	2	AFO NPDES Desktop Compliance Review	Dan Bratrud	04/24/2014	Yes	AFO - Confinement	Swine Nursery	16000			Spills #012114-TRL-0733	Mr. Bankson reported that facility personnel were draining the under-building manure storage pits to the lagoon, and the drain line became plugged. Manure subsequently discharged from a clean-out port on the drain line and was discharged to the ground surface. The manure proceeded to flow along the ground surface, underneath the snow, to a surface drainage tile intake on-site. It then traveled through drainage tile, off-site, to Drainage Ditch (DD) #213. The tile line was flushed on 1/20/14, but further flushing is needed when weather allows. On 1/21/14, manure contaminated water was found in the receiving tributary (DD #213). Iowa Select Farms pumped the contaminated water from the tributary on 1/22/14. Further clean-up of frozen manure at the facility is still needed when weather conditions allow.

Went to ADL 6 and told them about it but nothing found by them or site contact. They called DNR 4/4/16 and ADL 6 contact (Lyle Anderson) was on site and it was found that the transfer PVC pipe from the buildings to the lagoons rupture right by the blower house next to the lagoons. The manure flowed down hill from the point to the south, along the east side of the east lagoon. Then head south to the Bole's pond, which it was indicated wasn't flowing before and once manure filled up the pond it flowed from the pond for two miles before entering Thompson River. It was indicated that later in the week, last week one building was empty along with 3 other areas. Once the issue was discovered no more buildings were emptied until the PVC pipe is fixed. See NOV in FODB for further details and update.

A silt fence and hay bales were also placed near the tile intake to capture any runoff not absorbed by the vegetation. In addition, a new solids settling basin had been installed east of the feedlot pens. These issues are considered resolved.

61442	AFO Facility Inspection	Brandon Miner	07/14/2014			Yes	05/04/2016	No	Yes	Yes	Visited feedlot to check on runoff controls. Facility is no longer in operation fences and bunks removed. A few of the runoff basins were still in place - tested ammonia in the water leaving the east basin and flowing down the waterway - 0.7 mg/L. Appeared that area will be used for row crop and basins left in for clean water runoff control. Unable to reach Mr. Michener - I left several messages over the past few months, but no response and goes directly to voicemail. Will follow-up again in the fall to confirm is no longer a feedlot.

61454	AFO Facility Inspection (Combined Facility)	Brandon Miner	02/15/2017			Yes	04/07/2017	No	Yes	No	Visited site to check on runoff to the creek to east. I did not observe evidence that runoff from the feedlot had reached the tributary, but still appears that is potential during precipitation events, especially with channelizing in road ditch. I spoke to Brent and he said he was going plant grass downstream of the solids settling structure and try to create a VTA of sorts.

61679	6	AFO NPDES Desktop Compliance Review	Josh Sobaski	07/09/2018	No	AFO - Confinement	Swine Gestation (& Boars)/Swine Sow and Litter/Swine Nursery/Swine Grow to Finish	360/40/300/1200			Spills #111214-JPR-1834	The tractor operator did not completely shut down the hydraulics on the load tractor and this resulted in the pit pump being inadvertently started while the operator was away from the trailer. The operator estimated that 1800 gallons was spilled to the ground surface and some of the manure (unknown amount) made it to a field tile intake which led to Clear Creek. We performed field tests and also collected samples for analytical testing based on field test results. The field test results indicated that manure impacted water had made its way past the first dam and we notified the owner of that and instructed him to dam the creek further down to attempt to prevent further migration of manure impacted water down the creek.

62058	3	AFO NPDES Desktop Compliance Review (Combined Facility)	Brandon Miner	08/14/2013	Yes	AFO - Confinement	Cattle Dairy Holstein/Cattle Dairy Holstein/Cattle Dairy Heifer & Hut Calves/Cattle Dairy Heifer & Hut Calves	3600/200/50/200			Spills #081809-KAL-0839	A pipe between two manure containment pits became plugged. A temporary line was laid over ground between the pits. A clamp came off a section of pipe. It is estimated that 20,000 to 30,000 gallons of manure spilled. The manure flowed through a grove of trees, into culverts and into an unnamed creek. The RP diked the ditch and put a PVC pipe over a tile line. The RP stated that there were no dead fish in the creek. They are not pumping the creek. They have hired an excavator to recover the manure. The RP was advised that FO3 would be making an an site investigation today.

62098	5	AFO NPDES Desktop Compliance Review	Bill Gibbons	10/27/2014	Yes	AFO - Confinement	Swine Grow to Finish	4000			Spills #082714-DJA-1100	8/27/2014 11 AM FO 5 a call about a fish kill in Jasper County south of Laurel in an unnamed tributary to Alloway Creek. When they arrived at the site they observed manure coming out of the west end of the building third from the north through the concrete wall above the ground surface. The manure was coming out as a slow trickle onto the ground pooling around the building next to it to the south and then going into an adjacent bean field in a southeast direction. It appeared the leak had been going on for some time because there was a burned up area in the bean field showing the trail of manure running toward the creek that ran north to south along the east side of the site then curving east to west south of the buildings. Manure was also observed pooling in the field. RP was told to bring a tractor to construct a berm to contain the manure and to start pumping up the liquid manure pooling on the ground. September 24, 2014 Curt Vos stated as soon as the beans were harvested they would be able to land apply manure. The situation with the pits was they still had some room to go and was confident they would be able to start land applying before there was any problems.
62110	4	AFO NPDES Desktop Compliance Review	Josh Chambers	08/19/2015	Yes	AFO - Confinement	Swine Grow to Finish	4000				
62111	4	AFO NPDES Desktop Compliance Review	Dan Olson	09/25/2014	Yes	AFO - Confinement	Swine Grow to Finish/Swine Nursery/Swine Gestation (& Boars)/Swine Sow and Litter	700/350/2935/440			Spills #103113-DPO-1615	There is a tube from the farrowing building to one gestation building and another tube that connects the 2 gestation barns. One gestation barn needs more room in the pit to keep ventilation working so a valve was shut. A cleanout riser was also broken and not reported. When a pit plug was pulled on farrowing barn, manure overflowed through the cleanout to a tile intake NW of the barn. The manure flowed NE in the tile to an outfall to a creek bed. The creek bed was dry at the tile outfall but had some water flowing at the first bridge 1/4 mile downstream. AMVC staff built a berm around broken cleanout and opened the valve back up. The manure around the cleanout went back down when they opened the valve. They also used ground hay to soak up manure around tile intake

He stepped away for 10 minutes to put a cow in. Hose broke. Sent an estimated 5,000 gallons of manure to the creek. Said that it just happened – I didn't ask for an exact time. Said he has a backhoe on the way and plans to attempt to dam up the creek and pump manure out. FO3 collected samples, contacted fisheries to conduct count.

62659											Settling basins #2 and #3 have the potential to discharge to the pond via tile line; since the pond could be considered a water of the state, manure is not allowed to discharge. Please contact the DNR concerning re-directing the discharge of settling basins #2 and #3 from the pond by October 1, 2014. 8/7/2015: Spoke with Jason as he provided an update. A proposed VTA design for the larger pens is in the works. Surveyer will be on site once the grass has been mowed. Discussed questions concerning designs for the smaller lots by the road; I recommended he contact Jeff (engineer) for accuracy and consistenc,

62810	6	AFO NPDES Desktop Compliance Review	Josh Sobaski	09/16/2015	Yes	AFO - Confinement	Swine Grow to Finish/Swine Nursery	2400/1200			Spills #080515-JJS-1430	8/5/15 1430 hours, report of dead fish at the Sugar Creek Bridge located along 210th Street, NE of Tipton. FO 6 responded with DNR fisheries was onsite conducting a stream assessment and fish kill count. Further investigation revealed the rp to be Rick L. Shumaker located at 1329 210th Street, Tipton (Facility ID #62810). On 8/4/15, Mr. Shumaker proceeded to transfer pump liquid swine manure at ~ 1945 hours from one swine confinement facility to another. Mr. Shumaker proceeded to perform other farm related chores until ~ 2030 hours, when he discovered that a hose coupler connection had failed. Mr. Shumaker ceased manure pumping. However, an unknown amount of liquid swine manure was released The manure flowed down-gradient through an adjacent farm field until it eventually reached Sugar Creek in Section 29, Fairfield Township, Cedar County. During the AM of 8/6/15. Paul Sleeper with DNR Fisheries communicatdaed that peliminary findings reveled ~ 4 miles of stream impacted with "thousands" of dead fish (some game fish). Mr. Shumaker is currently conducting remediation activities along the manure flow path.

This incident caused a fish kill. Contractor diked road ditch and diked the unnamed tributary 1/2 mile downstream of the road ditch to allow for pumping and land application of manure and impacted water.

64470	6	AFO NPDES Desktop Compliance Review	Jeff Prier	05/15/2015	Yes	AFO - Confinement	Swine Wean to Finish	2480			Spills #111113-KRL-1544	The pit under the hog confinement was full and ready to be pumped. Facility owner Curt Teggatz contracted with Joe Axmear (licensed manure applicator) to pump and land apply the liquid hog manure. When Joe and his crew showed up to set up their equipment, they discovered manure seeping out of the ground on the far east side of the confinement. They discovered that somehow, hog manure got into the onsite septic tank, flowed through the system and into the leachfield and surfaced before flowing down gradient, across a farmfield, and into an un-named dry creekbed. Curt was informed that Rick Heller, Iowa County Sanitarian would be in touch with him to get the septic tank problem figured out so the cross connect could be resolved to ensure this problem doesn't reoccur.

64838	6	AFO NPDES Desktop Compliance Review	Jeff Thomann	09/10/2015	Yes	AFO - Confinement	Swine Grow to Finish/Swine Grow to Finish	2400/1200			Spills #111717-TJJ-2202	Land applying manure from confinement and first section of umbilical hose cam loose. Estimated pump ran about 5 minutes at 1500 GPM. Release was on farm field but ran to tile intakes on south side of 100th Street. Twinam attempted to block tile intakes but once manure was observed discharging from tile, they used an end-loader to push dirt across the stream which was the upper end of Buffington Creek. Twinam report the creek was dry when the incident occurred. Will clean manure from around tile and pump water behind makeshift dam to surrounding farm fields.

64879	5	AFO NPDES Desktop Compliance Review	Bill Gibbons	05/19/2014	Yes	AFO - Confinement	Cattle Dairy Holstein/Cattle Dairy Heifer & Hut Calves	1500/500			Spills #050414-WCG-0858	<p>A pipe between a concrete manure basin and a two-cell earthen lagoon clogged and caused manure to back up into the concrete basin and cause it to overflow. The manure flowed through a waterway with tile inlets. Some eventually reached Big Bear Creek to the south. The basins were last checked the previous evening. 5/5/14 - I received the water samples from Mr. bartachek. I then met with Mr. Boehlen and Joe Lacaeyse (neighbor and manure applicator). We walked around the manure basins and down to Big Bear Creek. There were manure solids in the south waterway down to a shallow basin drained by tile inlets on the property to the south. There was some manure pooled in this low area. I asked them to clean this out when conditions dried out and to plug the tile inlets if a rainfall runoff occurs before cleanup. The creek was clear with no sign of manure. The tile was discharging clear water. We also checked the west waterway. There appeared to have been much less manure flow in this direction, and there was no flow at teh time. A tile inlet drained to a tributary to Big Bear Creek.</p> <p>We then discussed ways to prevent the recurrence of such a manure release. I will ask for a spill report when I receive laboratory results. FO5 staff will be doing a formal evaluation of the site later this quarter.</p>

65329	AFO Facility Inspection	Bert Noll	06/25/2015			No		Yes	No		Paul Puhmann has a small open lot that was found during the unknown township search. I just did an inspection on 5/4/18 and found a tile intake in his pen, so he was designated as a CAFO and required to submit a POA by 8/24/18 and have a permanent remedy by 11/30/18. So, as of right now, there isn't a permanent remedy in place and no follow-up visits have occurred yet.

65536	2	AFO NPDES Desktop Compliance Review	Daniel Watterson	02/10/2015	No	AFO - Confinement	Swine Wean to Finish	2490			Spills #110317-DWW-2138	Manure level in pit lowered to below leak point. Creek was dammed downstream and contaminated water pumped out into crop fields. Manure on surface was scrapped up and incorporated into ground. Per Daniel Watterson Leak discovered at septic pipe through pit wall. Manure entered field tile and reached creek.
