

# CANOPY COVER

COMMUNITY | FOREST | INVENTORY

**Urban tree canopy**, defined as the layer of leaves, branches and stems in a community that cover the ground when viewed from above, is a simple way for a community to get an overall picture of both residential and public trees. This canopy benefits community residents by cleaning air and water, reducing energy costs and increasing property value. Urban tree canopy cover assessments can increase these benefits by providing a foundation of data to base improvement goals.

The incorporated Iowa communities' data included was developed using high resolution land cover dataset, target year 2009, in conjunction with the incorporated boundaries from the 2010 census data. Zonal statistics were acquired using ArcGIS 10.1.
