

Use Attainability Analysis

1 Water Body Name	Unnamed Tributary to Unnamed Tributary to Little Wapsipinicon River
2 Segment Description	Mouth to Oran Community Sanitation District outfall
3 Segment Length (mi)	0.47
4 Drainage Area (sq. mi.)	0.5
5 Segment Start Latitude, Longitude (DD)	42.69719, -92.09381
6 Segment End Latitude, Longitude (DD)	42.69895, -92.08566
7 Route of Flow (Next Downstream Adopted Designated Use)	Unnamed Tributary (General Use, proposed) to Unnamed Tributary (A3, BWW2, pending) to Little Wapsipinicon River (A1, BWW2)
8 NPDES Facility and Permit Number (If Applicable)	Oran Community Sanitation District (0900902)
9 Sample Site ID(s)	1343-1
10 Segment County Name(s)	Bremer
11 Field Work Date(s)	9/20/2017

12 Aquatic Life Use Attainability Analysis - Conclusion

Recommended Highest Attainable Use: Aquatic Life Use	General Use
40 CFR 131.10(g)(2) (Flow)	The natural low flow conditions of the stream segment are insufficient to create the habitat necessary to support a community of fish (see Site Observations Table). A BWW1 designation requires multiple species and age ranges of game fish to be viable. A BWW2 designation requires permanent flow. A BWW3 designation requires intermittent flow with perennial pools. This segment has none of those. Therefore, the highest attainable use for this stream segment is general use. As this stream segment was not identified as perennial by the U.S. Geological Survey 1:100,000 DLG Hydrography Data Map (published July 1993) as described in 567 IAC 61.3(1)“b”, it does not require rulemaking.
40 CFR 131.10(g)(5) (Physical Conditions)	Physical conditions related to the natural features of the water body are insufficient to support a community of fish (see Site Observations Table). A BWW1 designation requires multiple species and age ranges of game fish to be viable. A BWW2 designation requires enough habitat beyond non-flowing perennial pools to support an aquatic community. A BWW3 designation requires habitat in perennial pools to support an aquatic community. This segment has none of those. Therefore, the highest attainable use for this stream segment is general use. As this stream segment was not identified as perennial by the U.S. Geological Survey 1:100,000 DLG Hydrography Data Map (published July 1993) as described in 567 IAC 61.3(1)“b”, it does not require rulemaking.

13 Recreational Use Attainability Analysis - Conclusion

Recommended Highest Attainable Use: Recreational Use	General Use
40 CFR 131.10(g)(2) (Flow)	The natural low flow conditions and water levels of the stream segment prevent the attainment of any recreational use (see Site Observations Table). A1, A2, and A3 designations require the ability to recreate in and on the water. This segment has no water. Therefore, the highest attainable use for this segment is general use. As this stream segment was not identified as perennial by the U.S. Geological Survey 1:100,000

	DLG Hydrography Data Map (published July 1993) as described in 567 IAC 61.3(1)“b”, it does not require rulemaking.

14 Flow

Field Work Date	Description
9/20/2017	USGS stream gage #05421000 data for the area indicated stream flows were normal at the time of assessment.

Use Attainability Analysis - Data

Site Observations

Use	Site parameter	Site ID # 1343-1
AL/R	15 Latitude, Longitude (DD)	42.69895, -92.08566
AL/R	16 Average Depth (in)	0
AL/R	17 Maximum Depth (in)	0
AL/R	18 Stream Width (ft)	0
AL/R	19 Pools Observed?	No
AL only	20 Non-Game Fish Present and Counts (Species: Number)	0
	21 Game Fish Present and Counts (Species (Size Range): Number)	0
	22 Stream Habitat (See also: #29 Site Photos)	No fish of catchable size were found on the date of sampling.
R only	23 Evidence of Use for Primary Contact Recreation? (Yes*/No)	No
	24 Evidence of Use by Children? (Yes*/No)	No
	25 Evidence of Use for Secondary Contact Recreation? (Yes*/No)	No
AL/R	26 Additional Description	Dry creek bed. No water or fish were observed.

AL = Aquatic Life

R = Recreation

*If yes, elaborate.
