Iowa Department of Natural Resources
Title V Operating Permit

Name of Permitted Facility: 3M (Minnesota Mining & Manufacturing Co.)
Facility Location: 3406 E. Pleasant Street, Knoxville, Iowa 50138
Air Quality Operating Permit Number: 01-TV-025R3
Expiration Date: October 10, 2026
Permit Renewal Application Deadline: April 10, 2026

EIQ Number: 92-3629
Facility File Number: 63-01-001

Responsible Official
Name: Tom Buzalewski
Title: Plant Manager
Mailing Address: 3406 E. Pleasant Street, Knoxville, Iowa 50138
Phone #: 641-828-5500

Permit Contact Person for the Facility
Name: Dzung Farrell
Title: Environmental Engineering Specialist
Mailing Address: 3406 E. Pleasant Street, Knoxville, Iowa 50138
Phone #: 651-252-9880

This permit is issued in accordance with 567 Iowa Administrative Code Chapter 22, and is issued subject to the terms and conditions contained in this permit.

For the Director of the Department of Natural Resources

Marnie Stein, Supervisor of Air Operating Permits Section 10/11/2021
Table of Contents

I. Facility Description and Equipment List .................................................................4
II. Plant - Wide Conditions ......................................................................................10
III. Emission Point-Specific Conditions ..................................................................16
IV. Emission Points Without Specific Conditions ..................................................145
V. General Conditions ..............................................................................................158
   G1. Duty to Comply
   G2. Permit Expiration
   G3. Certification Requirement for Title V Related Documents
   G4. Annual Compliance Certification
   G5. Semi-Annual Monitoring Report
   G6. Annual Fee
   G7. Inspection of Premises, Records, Equipment, Methods and Discharges
   G8. Duty to Provide Information
   G9. General Maintenance and Repair Duties
   G10. Recordkeeping Requirements for Compliance Monitoring
   G11. Evidence used in establishing that a violation has or is occurring.
        Compliance Certification
   G13. Hazardous Release
   G14. Excess Emissions and Excess Emissions Reporting Requirements
   G15. Permit Deviation Reporting Requirements
   G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP
        Regulations
   G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V
        Permit Modification
   G18. Duty to Modify a Title V Permit
   G19. Duty to Obtain Construction Permits
   G20. Asbestos
   G21. Open Burning
   G22. Acid Rain (Title IV) Emissions Allowances
   G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements
   G24. Permit Reopenings
   G25. Permit Shield
   G26. Severability
   G27. Property Rights
   G28. Transferability
   G29. Disclaimer
   G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification
   G31. Prevention of Air Pollution Emergency Episodes
   G32. Contacts List
VI. Appendix A: Links to Standards ......................................................................172
Abbreviations

acfm............................actual cubic feet per minute
CFR............................Code of Federal Regulations
CE ..................................control equipment
CEM ..........................continuous emission monitor
EIQ............................emissions inventory questionnaire
°F ...........................degrees Fahrenheit
EP ............................emission point
EU ............................emission unit
gr./dscf .......................grains per dry standard cubic foot
IAC ..........................Iowa Administrative Code
DNR ..........................Iowa Department of Natural Resources
KW ...........................kilowatts per hour
MMCF/hr ...................million cubic feet per hour
MVAC........................motor vehicle air conditioner
NSPS ..........................new source performance standard
ppmv……………… ..parts per million by volume
lb/hr .........................pounds per hour
lb/MMBtu ..................pounds per million British thermal units
SCC ..........................Source Classification Codes
scfm..........................standard cubic feet per minute
SIC ..........................Standard Industrial Classification
TPY ...........................tons per year
USEPA .......................United States Environmental Protection Agency

Pollutants
PM..............................particulate matter
PM10..........................particulate matter ten microns and less in diameter
PM2.5 ..........................particulate matter two point five microns and less in diameter
SO2 ..........................sulfur dioxide
NOx ...........................nitrogen oxides
VOC ..........................volatile organic compounds
CO ..............................carbon monoxides
HAP .........................hazardous air pollutants
# I. Facility Description and Equipment List

Facility Name: 3M (Minnesota Mining and Manufacturing Co.)  
Permit Number: 01-TV-025R3  
Facility Description: Tape Manufacturing (SIC 2672)

II. Plant-Wide Conditions

Facility Name: Minnesota Mining & Manufacturing (3M)
Permit Number: 01-TV-025R3

Permit conditions are established in accord with 567 Iowa Administrative Code rule 22.108

Permit Duration

The term of this permit is: 5 years
Commencing on: October 11, 2021
Ending on: October 10, 2026

Amendments, modifications and reopenings of the permit shall be obtained in accordance with 567 Iowa Administrative Code rules 22.110 - 22.114. Permits may be suspended, terminated, or revoked as specified in 567 Iowa Administrative Code Rules 22.115.

Emission Limits

Unless specified otherwise in the Source Specific Conditions, the following limitations and supporting regulations apply to all emission points at this plant:

Opacity (visible emissions): 40% opacity
Authority for Requirement: 567 IAC 23.3(2)"d"

Sulfur Dioxide (SO₂): 500 parts per million by volume
Authority for Requirement: 567 IAC 23.3(3)"e"

Particulate Matter:
No person shall cause or allow the emission of particulate matter from any source in excess of the emission standards specified in this chapter, except as provided in 567 – Chapter 24. For sources constructed, modified or reconstructed on or after July 21, 1999, the emission of particulate matter from any process shall not exceed an emission standard of 0.1 grain per dry standard cubic foot of exhaust gas, except as provided in 567 – 21.2(455B), 23.1(455B), 23.4(455B) and 567 – Chapter 24. For sources constructed, modified or reconstructed prior to July 21, 1999, the emission of particulate matter from any process shall not exceed the amount determined from Table I, or amount specified in a permit if based on an emission standard of 0.1 grain per standard cubic foot of exhaust gas or established from standards provided in 23.1(455B) and 23.4(455B). Authority for Requirement: 567 IAC 23.3(2)"a"

Fugitive Dust: Attainment and Unclassified Areas - A person shall take reasonable precautions to prevent particulate matter from becoming airborne in quantities sufficient to cause a nuisance as defined in Iowa Code section 657.1 when the person allows, causes or permits any materials to be handled, transported or stored or a building, its appurtenances or a construction haul road to be
used, constructed, altered, repaired or demolished, with the exception of farming operations or dust generated by ordinary travel on unpaved roads. Ordinary travel includes routine traffic and road maintenance activities such as scarifying, compacting, transporting road maintenance surfacing material, and scraping of the unpaved public road surface. (the preceding sentence is State Only) All persons, with the above exceptions, shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate. The public highway authority shall be responsible for taking corrective action in those cases where said authority has received complaints of or has actual knowledge of dust conditions which require abatement pursuant to this subrule. Reasonable precautions may include, but not be limited to, the following procedures.

1. Use, where practical, of water or chemicals for control of dusts in the demolition of existing buildings or structures, construction operations, the grading of roads or the clearing of land.
2. Application of suitable materials, such as but not limited to asphalt, oil, water or chemicals on unpaved roads, material stockpiles, race tracks and other surfaces which can give rise to airborne dusts.
3. Installation and use of containment or control equipment, to enclose or otherwise limit the emissions resulting from the handling and transfer of dusty materials, such as but not limited to grain, fertilizer or limestone.
4. Covering, at all times when in motion, open-bodied vehicles transporting materials likely to give rise to airborne dusts.
5. Prompt removal of earth or other material from paved streets or to which earth or other material has been transported by trucking or earth-moving equipment, erosion by water or other means.
6. Reducing the speed of vehicles traveling over on-property surfaces as necessary to minimize the generation of airborne dusts.

Authority for Requirement: 567 IAC 23.3(2)"c"

NESHAP Requirements

40 CFR Part 63 Subpart JJJJ
Numerous emission units at this facility are affected sources under Subparts A (General Provisions, 40 CFR §63.1 – 40 CFR §63.15) and JJJJ [National Emission Standards for Hazardous Air Pollutants for Paper and Other Web Coating, 40 CFR §63.3280 – 40 CFR §63.3420] of the National Emission Standard for Hazardous Air Pollutants (NESHAP).
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart JJJJ
567 IAC 23.1(4)"cj"
40 CFR Part 63 Subpart HHHHH
Many emission units at this facility are affected sources under Subparts A (General Provisions, 40 CFR §63.1 – 40 CFR §63.15) and HHHHH [National Emission Standards for Hazardous Air Pollutants for Miscellaneous Coating Manufacturing, 40 CFR §63.7980 – 40 CFR §63.8105] of the National Emission Standard for Hazardous Air Pollutants (NESHAP).
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart HHHHH
567 IAC 23.1(4)"dh"

40 CFR Part 63 Subpart FFFF
Many emission units at this facility are affected sources under Subparts A (General Provisions, 40 CFR §63.1 – 40 CFR §63.15) and FFFF [National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Manufacturing, 40 CFR §63.2430 – 40 CFR §63.2550] of the National Emission Standard for Hazardous Air Pollutants (NESHAP).
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart FFFF
567 IAC 23.1(4)"cf"

40 CFR Part 63 Subpart DDDDD
The emissions units Boiler1, Boiler2A, and PUMPHOUSE BOILER are affected sources under Subparts A (General Provisions, 40 CFR 63.1 – 40 CFR 63.15) and the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Industrial, Commercial, and Institutional Boilers and Process Heaters (40 CFR Part 63, Subpart DDDDD).
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart DDDDD

40 CFR Part 63 Subpart ZZZZ
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart ZZZZ
567 IAC 23.1(4)"cz"
40 CFR Part 63 Subpart EEEE
Non-gasoline organic liquid storage tanks and transfer racks located at this facility are affected sources under Subparts A (General Provisions, 40 CFR §63.1 – 40 CFR §63.15) and EEEE [National Emission Standards for Hazardous Air Pollutants: Organic Liquids Distribution (Non-Gasoline), 40 CFR §63.2330 – 40 CFR §63.2406] of the National Emission Standard for Hazardous Air Pollutants (NESHAP). The affected units are Tank 04-04, Tank 04-01, Tank 04-06, Tank 04-07, Tank 04-09, Tank 10-06, Tank 10-08, AATNK, Transfer Rack 6, TR Comp RM1, Coating MIXRM TR, General W/O ELC, and General W/ELC.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart EEEE
567 IAC 23.1(4)"ce"

40 CFR Part 63 Subpart KK
Emission units engaged in rotogravure printing located at this facility are affected sources under Subparts A (General Provisions, 40 CFR §63.1 – 40 CFR §63.15) and KK [National Emission Standards for Hazardous Air Pollutants: Printing and Publishing Industry, 40 CFR §63.820 – 40 CFR §63.839] of the National Emission Standards for Hazardous Air Pollutants (NESHAP). The affected units are 2NAD1, and 2NAD2. This facility complies with 40 CFR Part 63 Subpart KK by following the 2020 MACT for 40 CFR Part 63 JJJJ.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR Part 63 Subpart KK
567 IAC 23.1(4)"ak"

NSPS Requirements
40 CFR Part 60 Subpart RR
The permittee is responsible for ensuring that subject coating operations follow all of the regulations specified in Subpart RR [Standards of Performance for Pressure Sensitive Tape and Label Surface Coating Operations, 40 CFR §60.440- 40 CFR§60.447] of the Standard of Performance for New Stationary Sources (NSPS), as applicable.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR 60 subpart RR
567 IAC 23.1(2)"qq"
40 CFR Part 60 Subpart III
Emission unit GEN 007, Diesel Generator, is an affected source under Subpart A (General Provisions, 40 CFR 60.1 – 40 CFR 60.19) and Subpart IIII [Standards of Standards of Performance for Stationary Compression Ignition Internal Combustion Engines, 60.4200-60.4219] of the New Source Performance Standards (NSPS), as applicable. See Appendix A for a link to the Standard. Authority for Requirement: 40 CFR 60 Subpart IIII 567 IAC 23.1(2)'yyy"
III. Emission Point-Specific Conditions

Facility Name: 3M (Minnesota Mining & Manufacturing Co.)
Permit Number: 01-TV-025R3

Emission Point ID Number: 002-015

Associated Equipment

</tr>
</tbody>
</table>

Applicable Requirements

**Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)**
The emissions from this emission point shall not exceed the levels specified below.

- **Pollutant:** Opacity
  - Emission Limit(s): 40% (1)
  - Authority for Requirement: 567 IAC 23.3(2)"d"
  - DNR Construction Permit 99-A-219
  - (1) If emissions above the indicator opacity (25%) are observed other than at start-up, shut-down, or malfunction, a stack test may be required to demonstrate compliance with the particulate standard.

- **Pollutant:** Particulate Matter (PM)
  - Emission Limit(s): 0.31 lb/MMBtu
  - Authority for Requirement: DNR Construction Permit 99-A-219

- **Pollutant:** Sulfur Dioxide (SO₂)
  - Emission Limit(s): 2.5 lb/MMBtu
  - Authority for Requirement: 567 IAC 23.3(3)"b"
  - DNR Construction Permit 99-A-219
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Hours of operation:
A. This generator shall not be operated more than 500 hours per rolling twelve-month period.

Authority for Requirement: DNR Construction Permit 99-A-219

Process throughput:
B. This Generator (EU-Gen-002) shall only operate using diesel fuel.

Authority for Requirement: DNR Construction Permit 99-A-219

Reporting and Recordkeeping
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. Record the hours this generator operates per month. Calculate rolling twelve-month totals.

Authority for Requirement: DNR Construction Permit 99-A-219

NSPS and NESHAP Requirements
This emergency engine is subject to 40 CFR 63 Subpart ZZZZ - National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (RICE), as applicable. According to 40 CFR 63.6590(a)(1)(ii) this compression ignition emergency engine, located at a major source, is an existing stationary RICE as it was constructed prior to June 12, 2006.

Operation and Maintenance Requirements 40 CFR 63.6602, 63.6625, 63.6640 and Tables 2c and 6 to Subpart ZZZZ
1. Change oil and filter every 500 hours of operation or annually, whichever comes first. (See 63.6625(i) for the oil analysis option to extend time frame of requirements.)
2. Inspect air cleaner every 1000 hours of operation or annually, whichever comes first, and replace as necessary.
3. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.
4. Operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.
5. Install a non-resettable hour meter if one is not already installed.
6. Minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes.

Operating Limits 40 CFR 63.6640(f)
1. Any operation other than emergency operation, maintenance and testing and operation in non-emergency situations (up to) 50 hours per year is prohibited.
2. There is no time limit on the use of emergency stationary RICE in emergency situations.
3. You may operate your emergency stationary RICE up to 100 combined hours per calendar year for maintenance checks and readiness testing. See 40 CFR 63.6640(f)(2) for additional information and restrictions.
4. You may operate your emergency stationary RICE up to 50 hours per calendar year for non-emergency situations, but those 50 hours are counted toward the 100 hours of maintenance and testing. The 50 hours per year for non-emergency situations cannot be used for peak shaving, or to generate income for a facility to supply power to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

Recordkeeping Requirements 40 CFR 63.6655
1. Keep records of the maintenance conducted on the stationary RICE.
2. Keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. Document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. See 40 CFR 63.6655(f) for additional information.

Notification and Reporting Requirements 40 CFR 63.6645, 63.6650 and Table 2c to Subpart ZZZZ
1. An initial notification is not required per 40 CFR 63.6645(a)(5).
2. A report may be required for failure to perform the work practice requirements on the schedule required in Table 2c. (See Footnote 1 of Table 2c for more information.)

Authority for Requirement: 40 CFR Part 63 Subpart ZZZZ
567 IAC 23.1(4)"cz"

Emission Point Characteristics
*This emission point shall conform to the specifications listed below.*

Stack Height (feet): 32
Stack Diameter (inches): 6
Stack Exhaust Flow Rate (cfm): 2960
Stack Temperature (°F): 755

Authority for Requirement: DNR Construction Permit 99-A-219

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

- **Agency Approved Operation & Maintenance Plan Required?** Yes [ ] No [x]
- **Facility Maintained Operation & Maintenance Plan Required?** Yes [ ] No [x]
- **Compliance Assurance Monitoring (CAM) Plan Required?** Yes [ ] No [x]

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 003-003, 003-020, 003-051

Applicable Requirements

Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity
Emission Limit(s): 40% \(^{(1)}\)
Authority for Requirement: DNR Construction Permit 92-A-655-S3
567 IAC 23.3(2)"d"

\(^{(1)}\)If an opacity measurement exceeds the indicator opacity (25%) this facility should promptly investigate this source and make corrections. However, if after corrections are made the opacity continues to exceed the indicator opacity the Department may require a demonstration of compliance with mass emission limits, i.e. stack tests.

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 92-A-655-S3
567 IAC 23.3(2)"a"

Pollutant: Volatile Organic Compounds (VOC)
Emission Limit(s): 0.9 lb/hr; 3.9 tons/yr
Authority for Requirement: DNR Construction Permit 92-A-655-S3

Operational Limits & Requirements

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

NSPS and NESHAP Requirements

Some of these emission units are subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart A, General Provisions, as applicable.

Some of these emission units are subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart FFFF, Miscellaneous Organic Chemical Manufacturing, as applicable.

Authority for Requirement: 567 IAC 22.108(3)
40 CFR 63 Subpart A
567 IAC 23.1(4)"a"
40 CFR 63 Subpart FFFF
567 IAC 23.1(4)"cf"
**Emission Point Characteristics**

*This emission point shall conform to the specifications listed below.*

Stack Height (feet): 40.1
Stack Diameter (inches): 9
Stack Exhaust Flow Rate (scfm): Natural draft
Stack Temperature (°F): 72
Discharge Style: Vertical unobstructed

Authority for Requirement: DNR Construction Permit 92-A-655-S3

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

- **Agency Approved Operation & Maintenance Plan Required?** Yes ☐ No ☒
- **Facility Maintained Operation & Maintenance Plan Required?** Yes ☐ No ☒
- **Compliance Assurance Monitoring (CAM) Plan Required?** Yes ☐ No ☒

(1) Calculated on a weighted average basis for one calendar month (ref. 40 CFR §60.442(a)(1)).
(2) Applicable option from 40 CFR §63.3320(b)(1) through §63.3320(b)(3)
(3) Based on 8760 hours per year operation plus a compliance margin, assuming 100% VOC content.
Operating Requirements and Associated Recordkeeping

All records as required by these permits shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping requirements for these permits shall be:

A. Compliance shall be demonstrated for NSPS Subpart RR per 40 CFR §60.442, §60.443 and 40 CFR §60.444, as applicable.
   a. Monitoring and recordkeeping for NSPS Subpart RR shall be done per 40 CFR §60.445.
   b. All necessary records to demonstrate compliance with NSPS Subpart RR.
B. Compliance shall be demonstrated for NESHAP Subpart JJJJ per 40 CFR §63.3370.
   i. Recordkeeping for NESHAP Subpart JJJJ shall be done per 40 CFR §63.3400 and 40 CFR §63.3410.
C. The facility shall record the total combined VOC emissions for EU-CH Enclosure, EU-CH Pan, EU-Chamber Entrance, EU-Chamber Exit, and EU-Winder Exhaust on a rolling 12-month basis.
D. The facility shall record the total VOC emissions for EU-Compounding Area on a rolling 12-month basis.

<td>The outlet organic HAP concentration from the oxidizer shall not exceed 20 parts per million by volume (ppmv) by compound on a dry basis and the efficiency of the capture system shall be 100%.</td>
<td></td>
</tr>
<tr>
<td>5NO2</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>6ND</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(1) The affected source under NESHAP Subpart JJJJ at Plant No. 63-01-001 is the collection of web coating lines: (1) regulated by this permit and routed to the Regenerative Thermal Oxidizer (RTO): 1N Coater, 2NA Coater, 2NB Coater, 5N Coater and 6N Coater.

(2) Emission limits shall apply collectively across all the web coating lines and not individually by emission unit or separately to the RTO. Compliance with the applicable limit shall be demonstrated per 40 CFR §63.3370.

### Emission Limits #2 – National Emission Standards for Hazardous Air Pollutants (NESHAP), Subpart HHHHHH

<table>
<thead>
<tr>
<th>Emission Unit (1)</th>
<th>Pollutant</th>
<th>Limits (2)</th>
<th>Authority for Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHURN2</td>
<td>Organic HAP</td>
<td>Comply with each applicable emission limit and work practice standard in Tables 1 through 5 to Subpart HHHHHH of Part 63; or Comply with the requirements in 40 CFR §63.8050 (organic HAP emissions averaging); or Comply with the requirements in 40 CFR §63.8055 (weight percent organic HAP limit in coating products).</td>
<td>DNR Construction Permits 05-A-448-S10, 07-A-1539-S3, 07-A-1540-S3, 40 CFR §63.8000 – §63.8055, 40 CFR 63 Subpart HHHHHH, 567 IAC 23.1(4)&quot;dh&quot;</td>
</tr>

</tr>
<tr>
<td>CR2 2S</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>CR3 3S</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(1) Per 40 CFR §63.7985(d)(2), each of the emission units listed in this table is exempt from the requirements in Subpart HHHHHH of Part 63 when it is used as an "affiliated operation" to any of the web coating lines located at this facility that are subject to Subpart KK or Subpart JJJJ of 40 CFR Part 63. Except when it is an affiliated operation, each unit is subject to Subpart HHHHHH only when it is used to manufacture a coating that involves processing, using, or producing a HAP, in accordance with 40 CFR §63.7985(a).
### Emission Limits #3 – Combined Emissions

<table>

<td>NA</td>
<td>0.01 gr/dscf</td>
<td>500 ppmv</td>
<td>DNR Construction Permits 91-A-152-S4, 91-A-153-S8, 90-A-154-S6, 567 IAC 23.3(2)&quot;d&quot;, 567 IAC 23.4(13)</td>
</tr>
</tbody>
</table>

(1) Emission Points 003-111, 005-054, 005-055, 005-056 and 005-057 are not included in this table, because there are no individual emission limits associated with any of them.

(2) An exceedance of the indicator opacity of "no visible emissions" will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

(3) An exceedance of the indicator opacity of 10% will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).
Operating Requirements and Associated Recordkeeping
All records as required by these permits shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping requirements for these permits shall be:

VOC Group Emission Limit Requirements

B. The total VOC emissions from the operation of the "VOC Affected Emission Units" shall not exceed 2,000 tons per rolling 12-month period.
   a. The owner or operator shall maintain records on the identification and VOC content of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   b. The owner or operator shall maintain manufacturer and vendor provided information (Safety Data Sheets (SDS), technical data sheets, et.) for all materials used in the operation of the "VOC Affected Emission Units".
   c. The owner or operator shall maintain daily and monthly records of the amount, in gallons, of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   d. The owner or operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a monthly basis.
   e. The owner or operator shall calculate and record the amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 12-month basis.
f. The owner or operator shall implement the following procedure if the 12-month rolling total of VOC emitted from the operation of the "VOC Affected Emission Units" exceeds 1,600 tons.
   i. The owner of operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a daily basis.
   ii. The owner or operator shall calculate and record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 365-day basis.
   iii. Calculation and recordkeeping of VOC emissions data collected on Saturdays and Sundays shall be conducted on Mondays.
   iv. Calculation and recordkeeping of VOC emissions shall not be required when emissions do not occur.
   v. Daily calculations and recordkeeping of VOC shall continue until the rolling 12-month total amount drops below 1,600 tons on the last day of the month. Monthly calculations of VOC emissions from the "VOC Affected Emission Units" shall begin in the following month.

567 Iowa Administrative Code (IAC) – Chapter 33 Requirements

C. Per 567 IAC 33.3(18)"j"(4), as a result of Project Number 11-163, the owner or operator shall:
   a. Monitor VOC emissions from coating ovens EU 5NO1 and EU 5NO2 and VOC uncaptured emissions from EU 5NS1 and EU 5NS2.
   b. Calculate VOC annual emissions, in tons per year, on a calendar-year basis, for a period of ten (10) years following resumption of regular operations for EU 5NO1, EU 5NO2, EU 5NS1, and EU 5NS2.
   c. The owner or operator shall maintain a record of VOC emissions calculations and VOC annual emissions, in tons per year, following resumption of regular operations for EU 5NO1, EU 5NO2, EU 5NS1, and EU 5NS2.

D. Per 567 IAC 33.3(18)"j"(5), the owner or operator shall maintain a written record of the information required in Condition D for a period of ten (10) years after Project Number 11-163 is completed.

E. Per 567 IAC 33.3(18)"g", the owner or operator shall make the required written record available for review upon request for inspection by the Department or the general public pursuant to the requirements for Title V operating permits contained in 567 IAC 22.107(6).
National Emission Standards for Hazardous Air Pollutants Requirements

SUBPART KK

F. The owner or operator shall comply with the applicable requirements in 40 CFR Part 63, Subpart KK [§63.820 - §63.831], by following the requirements of Subpart JJJJ, as allowed in 40 CFR §63.3300(i).

SUBPART JJJJ

G. The owner or operator shall comply with the applicable requirements in 40 CFR Part 63, Subpart JJJJ [§63.3280 - §63.3420], including those not specifically mentioned in this document.
   a. The owner or operator shall demonstrate compliance with the applicable standard in Emission Limits #2 by following the pertinent procedures in 40 CFR §63.3370.
   b. The owner or operator shall use the Regenerative Thermal Oxidizer (CE RTO) to comply with the applicable standard in 40 CFR §63.3320, as necessary
      i. the owner or operator shall monitor and inspect the Regenerative Thermal Oxidizer (CE RTO) as required in 40 CFR §63.3350.
   c. The owner or operator shall comply with the notification and reporting requirements in 40 CFR §63.3400, as applicable.
   d. The owner or operator shall maintain the records specified in 40 CFR §63.3410, as applicable on a monthly basis in accordance with the requirements of §63.10(b)(1).

SUBPART HHHHH

H. The owner or operator shall comply with the applicable requirements in 40 CFR Part 63, Subpart HHHHH [§63.7980 - §63.8105], including those not specifically mentioned in this document.
   a. The owner or operator shall demonstrate compliance with the applicable standard in Emission Limits #3 by following the pertinent requirements in 40 CFR §63.8000 through §63.8030, or the alternative compliance means in §63.8050 and §63.8055.
   b. The owner or operator shall comply with the notification, reporting, and recordkeeping requirements in 40 CFR §63.8070, §63.8075, and §63.8080, respectively, as applicable.

SUBPART FFFF

I. MOGUL1A is subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart FFFF, Miscellaneous Organic Chemical Manufacturing and 40 CFR 63 Subpart A, General Provisions, as applicable.

CONTROL EQUIPMENT REQUIREMENTS

J. The thermal oxidizers, dryers, and ovens shall use natural gas as the only fuel.
K. The thermal oxidizer shall be operated at all times that process streams are vented to it and shall be maintained at a minimum operating temperature of 1,450 degrees Fahrenheit (measured as a 3-hour average).
a. The owner or operator shall collect and record the combustion chamber temperature of the thermal oxidizer, in degrees Fahrenheit on a continuous basis.

b. The owner or operator shall calculate and record the 3-hour average of the combustion chamber temperature in degrees Fahrenheit. If the 3-hour average combustion chamber of the thermal oxidizer falls below 1,450 degrees Fahrenheit, the owner or operator shall investigate and make any necessary corrections.

L. The owner or operator shall inspect and maintain the thermal oxidizer according to the manufacturer’s instructions and specifications.

a. The owner or operator shall keep a log of all maintenance and inspection activities performed on the control equipment described in this document. This log shall include, but shall not limited to:

i. The date that any inspection and/or maintenance was performed on the control equipment;

ii. Any issues identified during the inspection;

iii. Any issues addressed during the maintenance activities;

iv. Any actions taken to correct operating temperature malfunctions; and

v. Identification of the staff member performing the maintenance or inspection.

(1) In May 2020, the mass of the materials printed in EU 2NAD1 and EU 2NAD2 exceeded 5% of the total mass of the materials applied onto the line, and became subject to Subpart KK as it no longer met the requirements of 40 CFR §63.821(a)(2)(ii). Per 40 CFR §63.3300(i), these emission units may continue to demonstrate compliance under Subpart JJJJ in lieu of demonstrating compliance under Subpart KK.

(2) Each of the emission units listed is subject to NESHAP Subpart HHHHH only when it is used to manufacture a HAP-containing coating that will be shipped from the facility, except if the unit is an “affiliated operation” of a web coating line that is located at Plant Number 63-01-001 that is subject to NESHAP Subpart KK or NESHAP Subpart JJJJ.

(3) Applies only when the reaction is shipped out and not used in house. Otherwise it is an affiliated operation for NESHAP Subpart JJJJ.

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

## Monitoring Requirements

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Agency Approved Operation & Maintenance Plan Required?**  
Yes [ ]  No [X]  

**Facility Maintained Operation & Maintenance Plan Required?**  
Yes [ ]  No [X]  

**Compliance Assurance Monitoring (CAM) Plan Required?**  
Yes [X]  No [ ]  

*CAM Plan requirement met through compliance with construction permit and NESHAP requirements. Separate CAM Plan for VOC’s not required at this time.  
Authority for Requirement: 567 IAC 22.108(3)

Applicable Requirements

Emission Limits (lb/hr, gr/dscf, lb/MBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Volatile Organic Compounds (VOC)

(1) Emission Limit(s): Total VOC emissions from emission points 004-005, 004-006, 004-007, 004-012 (excluding emission unit 6ND), 004-029, and 007-005 shall not exceed 2000 tons per rolling twelve month period.

567 IAC 22.108(14)

(1) 3M Knoxville sent a letter dated 04-25-08 requesting that emission points 004-007, and 004-029 be included in this 2000 tons/year VOC limit.

Pollutant: Organic Hazardous Air Pollutants (Organic HAP)

Emission Limit(s): Organic HAP emissions shall be limited per 40 CFR §63.3320(b).

Authority for Requirement: 40 CFR 63 Subpart JJJJ
567 IAC 23.1(4)"cj"
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. The emission units listed below shall collectively be referred to as the "VOC Affected Emission Units" for the purposes of this document.

B. The total VOC emissions from the operation of the "VOC Affected Emission Units" shall not exceed 2,000 tons per rolling 12-month period.
   a. The owner or operator shall maintain records on the identification and VOC content of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   b. The owner or operator shall maintain manufacturer and vendor provided information (Safety Data Sheets (SDS), technical data sheets, et.) for all materials used in the operation of the "VOC Affected Emission Units".
   c. The owner or operator shall maintain daily and monthly records of the amount, in gallons, of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   d. The owner or operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a monthly basis.
   e. The owner or operator shall calculate and record the amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 12-month basis.
   f. The owner or operator shall implement the following procedure if the 12-month
rolling total of VOC emitted from the operation of the "VOC Affected Emission Units" exceeds 1,600 tons.

i. The owner of operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a daily basis.

ii. The owner or operator shall calculate and record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 365-day basis.

iii. Calculation and recordkeeping of VOC emissions data collected on Saturdays and Sundays shall be conducted on Mondays.

iv. Calculation and recordkeeping of VOC emissions shall not be required when emissions do not occur.

v. Daily calculations and recordkeeping of VOC shall continue until the rolling 12-month total amount drops below 1,600 tons on the last day of the month. Monthly calculations of VOC emissions from the "VOC Affected Emission Units" shall begin in the following month.

567 IAC 22.108(14)

**Applicable Requirements**

**Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)**

The emissions from this emission point shall not exceed the levels specified below.

None are required at this time.

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits

A. The amount of material stored in the storage tank shall not exceed 2,100,000 gallons on a rolling 12-month basis.

**Reporting and Recordkeeping**

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. The owner or operator shall record and maintain records of the amount of material stored in the storage tank on a rolling 12-month basis.

Authority for Requirement: DNR Construction Permit 98-A-662-S1
**Emission Point Characteristics**  
*This emission point shall conform to the specifications listed below.*

Stack Height (feet): 43  
Stack Diameter (inches): 4  
Stack Exhaust Flow Rate (scfm): Vent to atmosphere  
Stack Temperature (°F): 70  
Discharge Style: Vertical Unobstructed  
Authority for Requirement: DNR Construction Permit 98-A-662-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Applicable Requirements

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Volatile Organic Compounds (VOC)
Emission Limit: 43 tons/yr for the 6N Coating Line

**Operational Limits & Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Reporting and Recordkeeping**
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

The permit holder, owner or operator of the facility shall record the total VOC emissions for the 6N-1 Coating Line on a rolling twelve (12) month basis.

NSPS and NESHAP Requirements
This emission unit is subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart JJJJ, Paper and Other Web Coating and 40 CFR 63 Subpart A, General Provisions, as applicable.

Applicable Requirements

For Emission Unit Die Clean 2 Only:

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity

Emission Limit(s): 40% (1)

Authority for Requirement: DNR Construction Permit 13-A-458

(1) An exceedance of the indicator opacity of "no visible emissions" will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

For Emission Unit Die Clean 2 Only:

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. The solvent usage of this operation is limited to a maximum of 10,000 gallons of solvent per twelve (12) month period, rolled monthly.

B. The VOC content of any solvent used in this operation shall not exceed 7.88 pounds per gallon.

C. The solvents used in this operation shall not include methylene chloride (CAS No. 75-09-2), perchloroethylene (CAS No. 127-18-4), trichloroethylene (CAS No. 79-01-6), 1,1,1-trichloroethane (CAS No. 71-55-6), carbon tetrachloride (CAS No. 56-23-5) or chloroform (CAS No. 67-66-3), or any combination of these halogenated HAP solvents, in a total concentration greater than 5 percent by weight.
Reporting and Recordkeeping
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. At the end of each month, record the amount (in gallons) of solvent used in this operation over the previous month.
B. At the end of each month, record the amount (in gallons) of solvent used in this operation over the previous twelve (12) months.
C. Maintain a copy of a SDS or other vendor’s documentation showing the VOC content and composition of all solvents used in this operation.

Authority for Requirement: DNR Construction Permit 13-A-458

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height, (ft, from the ground): 32
Stack Opening, (inches, dia.): 24 x 16
Exhaust Flow Rate (scfm): 4,200
Exhaust Temperature (°F): Ambient (72)
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 13-A-458

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Applicable Requirements

**Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Volatile Organic Compounds (VOC)

(1) Emission Limit(s): Total VOC emissions from emission points 004-005, 004-006, 004-007, 004-012 (excluding emission unit 6ND), 004-029, and 007-005 shall not exceed 2000 tons per rolling twelve month period.

(1) 3M Knoxville sent a letter dated 04-25-08 requesting that emission points 004-007, and 004-029 be included in this 2000 tons/year VOC limit.

Operational Limits & Requirements

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

A. The emission units listed below shall collectively be referred to as the "VOC Affected Emission Units" for the purposes of this document.

B. The total VOC emissions from the operation of the "VOC Affected Emission Units" shall not exceed 2,000 tons per rolling 12-month period.
   a. The owner or operator shall maintain records on the identification and VOC content of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   b. The owner or operator shall maintain manufacturer and vendor provided information (Safety Data Sheets (SDS), technical data sheets, et.) for all materials used in the operation of the "VOC Affected Emission Units".
   c. The owner or operator shall maintain daily and monthly records of the amount, in gallons, of each VOC-containing material used in the operation of the "VOC Affected Emission Units".
   d. The owner or operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a monthly basis.
   e. The owner or operator shall calculate and record the amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 12-month basis.
   f. The owner or operator shall implement the following procedure if the 12-month rolling total of VOC emitted from the operation of the "VOC Affected Emission Units" exceeds 1,600 tons.
      vi. The owner of operator shall record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a daily basis.
      vii. The owner or operator shall calculate and record the total amount of VOC, in tons, emitted from the operation of the "VOC Affected Emission Units" on a rolling 365-day basis.
      viii. Calculation and recordkeeping of VOC emissions data collected on Saturdays and Sundays shall be conducted on Mondays.
      ix. Calculation and recordkeeping of VOC emissions shall not be required when emissions do not occur.
      x. Daily calculations and recordkeeping of VOC shall continue until the rolling 12-month total amount drops below 1,600 tons on the last day of the month. Monthly calculations of VOC emissions from the "VOC Affected Emission Units" shall begin in the following month.

567 IAC 22.108(14)
**NSPS and NESHAP Requirements**

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

The emissions from these emission points shall not exceed the levels specified below.

Pollutant: Volatile Organic Compounds (VOC) (1)

- Emission Limit(s): 43 tons/yr
- Authority for Requirement: DNR Construction Permits 07-A-938-S2, 07-A-939-S1

(1) This limit was carried over from the original permit for the 6N-1 Coating Line. The total combined emissions from emission points 004-031, 004-034 and 004-067 shall not exceed 43 tons of VOC/yr.

Pollutant: Organic Hazardous Air Pollutants (Organic HAP)

- Emission Limit(s): Organic HAP emissions shall be limited per 40 CFR §63.3320(b). Compliance shall be demonstrated per 40 CFR §63.3370.
- Authority for Requirement: DNR Construction Permits 07-A-938-S2, 07-A-939-S1

671 IAC 23.1(4)"cj"

40 CFR 63 Subpart JJJJ

**Operating Requirements with Associated Monitoring and Recordkeeping**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below. All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. The permit holder, owner or operator of the facility shall record the total VOC emissions for the 6N-1 Coating Line on a rolling twelve (12) month basis.

B. Compliance shall be demonstrated for NESHAP subpart JJJJ per 40 CFR §63.3370
   i. Monitoring for NESHAP subpart JJJJ shall be done per 40 CFR §63.3350
   ii. Recordkeeping for NESHAP Subpart JJJJ shall be done per 40 CFR §63.3400 and 40 CFR §63.3410.

A. The permit holder shall maintain records on the premises to show the twelve month total, rolled monthly, amount of material stored in the storage vessel administered under DNR permit 98-A-667. Records shall be maintained for five years and available for inspection upon request by representatives of the Department.
B. The permit holder shall maintain records on the premises to show the dimensions and the capacity of the storage vessel administered under DNR permit 98-A-667. Records shall be maintained for the life of the vessel and available for inspection upon request by representatives of the Department.

Authority for Requirement: DNR Construction Permit 98-A-667
**Emission Point Characteristics**
*This emission point shall conform to the specifications listed below.*

Stack Height (feet): 37.0
Stack Diameter (inches): 4.0
Stack Exhaust Flow Rate (scfm): Vent to atmosphere
Stack Temperature (°F): Ambient
Discharge Style: NA
Authority for Requirement: DNR Construction Permit 98-A-667

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Agency Approved Operation & Maintenance Plan Required?** Yes ☐ No ☒

**Facility Maintained Operation & Maintenance Plan Required?** Yes ☐ No ☒

**Compliance Assurance Monitoring (CAM) Plan Required?** Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 004-061

Applicable Requirements

Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

None are required at this time.

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits

Process throughput:
A. The twelve month total, rolled monthly, amount of material stored in the storage vessel administered under DNR permit 98-A-666 shall not exceed 1,580,000 gallons.

Reporting and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. The permit holder shall maintain records on the premises to show the twelve month total, rolled monthly, amount of material stored in the storage vessel administered under DNR permit 98-A-666. Records shall be maintained for five years and available for inspection upon request by representatives of the Department.
B. The permit holder shall maintain records on the premises to show the dimensions and the capacity of the storage vessel administered under DNR permit 98-A-666. Records shall be maintained for the life of the vessel and available for inspection upon request by representatives of the Department.

Authority for Requirement: DNR Construction Permit 98-A-666
**NSPS and NESHAP Requirements**
This emission unit is subject to Subparts A (General Provisions, 40 CFR §63.1 - §63.15) and Subpart EEEE (National Emission Standards for Hazardous Air Pollutants: *Organic Liquids Distribution (Non-Gasoline)*, §63.2330 – §63.2406) of the National Emission Standards for Hazardous Air Pollutants (NESHAP).

**Applicable Requirements**

**Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Volatile Organic Compounds (VOC)

Emission Limit(s): 30 tons/yr (1, 2), 0.2 lb/lb solids applied (2)

Authority for Requirement: DNR Construction Permit 01-A-841

40 CFR 60 Subpart RR

567 IAC 23.1(2) "qq"

(1) This is the total for emission units permitted under permit numbers 92-A-653-S4, 92-A-652-S4, 95-A-290-S2, 01-A-840 and 01-A-841. This limit also includes emissions from EP 004-088.

(2) EP 004-081, covered under DNR Construction Permit # 01-A-841, was supplemented with stack, 004-088. The original stack and then the installation of 004-088 were completed under a construction permit exemption letter from Clark Ott, March 12, 1996. Roughly 95% of the emissions exhaust through 004-088 and 5% through 004-081.

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.***

**Operating Limits**

No operating limits are required for these emission units at this time

**Reporting and Recordkeeping**

*All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*

These records shall show the following:

A. Per 40 CFR §60.443, calculations to determine compliance with the VOC standard of 0.2 lb of VOC/lb of coating solids applied.

B. Records as required per 40 CFR §60.445.

Authority for Requirement: DNR Construction Permit 01-A-841

40 CFR 60 subpart RR
NSPS and NESHAP Requirements
This emission unit is subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart A, General Provisions and Subpart JJJJ, Paper and Other Web Coating, as applicable.

Authority for Requirement:  567 IAC 22.108(3)
40 CFR 63 Subpart A
567 IAC 23.1(4)"a"
40 CFR 63 Subpart JJJJ
567 IAC 23.1(4)"ej"

This emission unit is subject to the requirements of 40 CFR 60 Subpart A, General Provisions and Subpart RR, "Standards of Performance for Pressure Sensitive Tape and Label Surface Coating Operations", as applicable. This unit is subject to the requirements of §60.442(a) as well as all other applicable sections of this subpart.

Authority for Requirement:  DNR Construction Permit 01-A-841
40 CFR 60 Subpart A
567 IAC 23.1(2)
40 CFR 60 subpart RR
567 IAC 23.1(2)"qq"

Emission Point Characteristics
This emission point shall conform to the specifications listed below.

Stack Height (feet): 65.3
Stack Diameter (inches): 16
Stack Exhaust Flow Rate (scfm): 3,000
Stack Temperature (°F): 72
Discharge Style: Vertical Unobstructed

Authority for Requirement:  DNR Construction Permit 01-A-841

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**
*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Volatile Organic Compounds (VOC)
Emission Limit(s): 3.5 tons/yr

Authority for Requirement: DNR Construction Permit 95-A-457-S1

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits**

A. Total combined solvent consumption for the tank and pump cart cleaning station is limited to 1,000 gallons per 12-month period.

B. The density of the solvent used shall not exceed 7.0 pounds per gallon.

**Reporting and Recordkeeping**

*All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*

A. The consumption of solvent, in gallons, on a rolling 12-month period basis.

B. The density of each solvent used in pounds per gallon.

C. A copy of the Safety Data Sheet (SDS) for all solvents used at these emission units.

Authority for Requirement: DNR Construction Permit 95-A-457-S1
**Emission Point Characteristics**

This emission point shall conform to the specifications listed below

Stack Height (feet): 30  
Stack Diameter (inches): 22  
Stack Exhaust Flow Rate (scfm): 5,000  
Stack Temperature (°F): Ambient  
Discharge Style: Vertical Unobstructed  
Authority for Requirement: DNR Construction Permit 95-A-457-S1

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required? Yes ☒ No ☐

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.

The data pertaining to the plan shall be maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.
Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

the water column. Excursions trigger an inspection, corrective action and a recordkeeping requirement. The inspection that is triggered is a NVE emissions observation.

water column. Excursions trigger an inspection, corrective action and a recordkeeping requirement. The inspection that is triggered is a NVE emissions observation.

trigger an inspection, corrective action, and a recordkeeping requirement. The inspection that is triggered is an inspection of the bags and a replacement of all of the bags if an issue is found.

III. Performance Criteria

| A. Data Representativeness | The differential pressure is measured across the baghouse. | The differential pressure is measured across the baghouse. | Visible emissions observations are made at the emission point and on the external baghouse unit, system ductwork and associated components. |
| B. Verification of Operational Status | The pressure gauge will be calibrated, operated, and maintained according to the manufacturer’s specifications. | The pressure gauge will be calibrated, operated, and maintained according to the manufacturer’s specifications. | Not applicable. |
| C. QA/QC Practices and Criteria | Pressure gauges will be calibrated, operated, and maintained according to the manufacturer’s specifications. | Pressure gauges will be calibrated, operated, and maintained according to the manufacturer’s specifications. | The observer will be trained by 3M to detect visible emissions. |
| D. Monitoring Frequency | The 24 hour alarm status is recorded. (Alarm/No Alarm is continually recorded on the Active Factory system) | The differential pressure will be inspected via a PMS every 4 weeks | No visible emissions (NVE) observations are made at the emission point every two weeks via a PMR. |
| E. Data Collection Procedures | Each day's alarm status is recorded. | Results of baghouse differential pressure checks will be recorded on PMS20466 | Results of “no visible emissions” observations are recorded PMR 62386 and noted as a 1 if no issues are found. |

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

A. The amount of any single HAP emitted from Churn 1 shall be limited to a maximum of 9.4 tons per 12-month rolling period.

B. The amount of all HAPs emitted from Churn 1 shall be limited to a maximum of 24.4 tons per 12-month rolling period.

HAP emissions shall by monitored and recorded and required in the Reporting and Recordkeeping section.
Reporting and Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

The records shall show the following:

A. A Safety and Data Sheet (SDS) of each material utilized shall be kept on-site and available for inspection by the DNR to verify VOC and HAP content.
B. Record the monthly amount of material utilized (in applicable units) by Churn 1.
C. After the first twelve (12) months of operation, calculate and update the HAP emission totals from Churn 1 on a rolling 12-month basis for each month of operation.
D. HAP emissions shall be determined using the emission factor provided in the table below:

<table>
<thead>
<tr>
<th>Emission Unit</th>
<th>Permit Number</th>

<th>Emission Factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Churn 1</td>
<td>02-A-384-S1</td>
<td>Gallons</td>
<td>0.02 lb HAP/gal</td>
</tr>
</tbody>
</table>

Authority for Requirement: DNR Construction Permit 02-A-384-S1

(*These requirements are from a construction project which included three construction permits (02-A-383-S1, 02-A-384-S1, and 02-A-385-S1). Two of these permits (02-A-383-S1 and 02-A-385-S1) have been rescinded relating to Mogul 1 (EP 005-009) and Churn 2 (005-052) because these two emission units were routed to the thermal oxidizer (007-005) in 2005.

Emission Point Characteristics

The emission point shall conform to the specifications listed below:

Stack Height, (ft, from the ground): 24
Stack Opening, (inches, dia.): 2
Exhaust Flow Rate (scfm): 0.5
Exhaust Temperature (°F): 68
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 02-A-384-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required?  Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required?  Yes ☐ No ☒

Compliance Assurance Monitoring (CAM) Plan Required?  Yes ☐ No ☒

Authority for Requirement:  567 IAC 22.108(3)
Emission Point ID Number: 007-030

Applicable Requirements

**Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity
Emission Limit(s): 40% (1)
Authority for Requirement: DNR Construction Permit 76-A-181-S2
567 IAC 23.3(2)"d"

(1) An exceedance of the indicator opacity of "No Visible Emissions" will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter (PM)
Emission Limits: 0.38 lb/MMBtu
Authority for Requirement: DNR Construction Permit 76-A-181-S2
567 IAC 23.3(2)"b"

Pollutant: Sulfur Dioxide (SO₂)
Emission Limit(s): 500 ppmv
Authority for Requirement: DNR Construction Permit 76-A-181-S2
567 IAC 23.3(3)"e"

**Operational Requirements with Associated Monitoring and Recordkeeping**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below. All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*

**NSPS and NESHAP Requirements**

This equipment is subject to regulation by the following federal regulation: National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [40 CFR Part 63 Subpart DDDDD], as applicable.

Authority for Requirement: 40 CFR Part 63 Subpart DDDDD
**Emission Point Characteristics**  
*Each emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 82  
Stack Opening, (inches, dia.): 36  
Exhaust Flow Rate (scfm): 14,600  
Exhaust Temperature (°F): 500  
Discharge Style: Vertical  
Authority for Requirement: DNR Construction Permit 76-A-181-S2

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

567 IAC 23.1(2)"yyy"

*Compliance with the CO limit is demonstrated by purchasing an engine certified by the manufacturer to the reference limit.

**Operational Limits & Requirements**
*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits**
A. This generator, Gen 007, shall operate only in emergency situations or for routine maintenance and testing.
B. This generator, Gen 007, shall not operate more than 500 hours per rolling twelve-month period.
C. Beginning October 1, 2010, diesel fuel fired in this generator shall be limited to a maximum sulfur content of 15 ppm and a minimum cetane index of 40 or a maximum aromatic content of 30 percent by volume per 40 CFR§80.510(b).

**Reporting and Recordkeeping**
*All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*
A. Record each month the total hours of operation for this generator, Gen 007, and the reason the generator was operated. Calculate and record rolling twelve-month totals.
B. Maintain records of the sulfur content of the fuel oil utilized in this generator, Gen 007.

Authority for Requirement: DNR Construction Permit 10-A-524
40 CFR 60 Subpart IIII
567 IAC 23.1(2)"yyy"

**NSPS and NESHAP Requirements**
This emission unit is subject to the New Source Performance Standards (NSPS) Subpart IIII – Standards of Performance for Stationary Compression Ignition Internal Combustion Engines (40 CFR §60.4200 through 40 CFR §60.4219) and to NSPS Subpart A - General Provisions (40 CFR §60.1 through 40 CFR §60.19), as applicable and is also subject to the requirements of 567 IAC 23.1(2)"yyy".

The emission unit is subject to the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines (Subpart ZZZZ). Stationary RICE units subject to regulations under 40 CFR Part 60; however, must meet the requirements of Subpart ZZZZ by meeting the requirements of 40 CFR Part 60 Subpart III, as applicable. No further requirements apply for such engines under Subpart ZZZZ.
Authority for Requirement:  DNR Construction Permit 10-A-524
40 CFR 60 Subpart A
567 IAC 23.1(2)
40 CFR 60 Subpart III
567 IAC 23.1(2)"yyy"
40 CFR 63 Subpart ZZZZ
567 IAC 23.1(4)"cz"

Emission Point Characteristics
*The emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 9.4
Stack Opening, (inches, dia.): 10
Exhaust Flow Rate (scfm): 2,781
Exhaust Temperature (°F): 425
Discharge Style: Vertical Unobstructed
Authority for Requirement:  DNR Construction Permit 10-A-524

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Operational Requirements with Associated Monitoring and Recordkeeping**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below. All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*

A. Boiler 2 (EU-Boiler 2A) is limited to firing on natural gas. Prior to burning any other fuels, the permittee shall submit an application to the Iowa DNR - Air Quality Bureau to modify this permit.

B. The owner or operator shall comply with 40 CFR §60.48c(g) by choosing one of the following options:
   1. record and maintain records of the amount of each fuel combusted during each operating day,
   2. record and maintain records of the amount of each fuel combusted during each calendar month, or
(3) record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

Authority for Requirement:  DNR Construction Permit 19-A-628

**NSPS and NESHAP Applicability**

This emission unit is subject to 40 CFR 60 Subpart A, General Provisions and Subpart Dc, Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units, as applicable.

Authority for Requirement:  DNR Construction Permit 19-A-628

40 CFR 60 Subpart A

Applicable Requirements

Emission Limits (lb./hr., gr/dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 5% (1)
Authority for Requirement: DNR Construction Permit 94-A-167-S1
567 IAC 23.3(2)"d"
(1) Visible emissions will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter
Emission Limit(s): 0.01 gr/dscf
Authority for Requirement: DNR Construction Permit 94-A-167-S1
567 IAC 23.4(13)

Pollutant: Volatile Organic Compounds (VOC)
Emission Limit(s): 1.75 lb/hr
Authority for Requirement: DNR Construction Permit 94-A-167-S1

Operational Limits & Requirements
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall follow the applicable requirements of the NSPS, Subpart RR, 40 CFR §60.440 – §60.447.
B. The owner or operator shall follow the applicable requirements of the NESHAP, Subpart JJJJ, 40 CFR §63.3280 – §63.3410.

Authority for Requirement: DNR Construction Permit 94-A-167-S1
40 CFR 63 Subpart JJJJ
567 IAC 23.1(4)"cj"
40 CFR 60 Subpart RR
NSPS and NESHAP Requirements
This emission unit is subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart A, General Provisions and Subpart JJJJ, Paper and Other Web Coating, as applicable.

This emission unit is subject to the requirements of 40 CFR 60 Subpart A, General Provisions and Subpart RR, "Standards of Performance for Pressure Sensitive Tape and Label Surface Coating Operations", as applicable. This unit is subject to the requirements of §60.442(a) as well as all other applicable sections of this subpart.

Authority for Requirement:   DNR Construction Permit 94-A-167-S1
  40 CFR 63 Subpart A
  567 IAC 23.1(4)"a"
  40 CFR 63 Subpart JJJJ
  567 IAC 23.1(4)"cj"
  40 CFR 60 Subpart A
  567 IAC 23.1(2)
  40 CFR 60 Subpart RR
  567 IAC 23.1(2)"qq"

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height, (ft, from the ground):  54
Stack Outlet Dimensions, (inches):  12
Exhaust Flow Rate (scfm):  500
Exhaust Temperature (°F):  72
Discharge Style:  Vertical Unobstructed

Authority for Requirement:   DNR Construction Permit 94-A-167-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Opacity Monitoring:
Visible emissions shall be observed on a weekly basis to ensure that none occur when the emission unit on this emission point is at or near full capacity. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the
observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required. If an opacity (>5 %) is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from observation of the violation.

If weather conditions prevent the observer from conducting an observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

### Opacity Monitoring

Visible emissions shall be observed on a weekly basis to ensure that none occur when the emission unit on this emission point is at or near full capacity. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no
visible emissions, then a Method 9 observation will be required. If an opacity (>5 %) is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from observation of the violation.

If weather conditions prevent the observer from conducting an observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

567 IAC 23.1(2)"qq"

(1) Per 40 CFR §60.442(a)(1), calculated on a weighted average basis for one calendar month.

Pollutant: Total Hazardous Air Pollutants (HAP)

Emission Limit(s): The owner or operator shall choose an applicable emission standard from 40 CFR §63.3320(b)(1) through 40 CFR §63.3320(b)(3).

40 CFR 63 Subpart JJJJ

567 IAC 23.1(4)"cj"

**For Emission Points 032-002, 032-020 and 032-021 (combined):**

Pollutant: Volatile Organic Compounds (VOC)

Emission Limit(s): 0.56 lb/hr

Authority for Requirement: DNR Construction Permits 18-A-441-S1, 18-A-442-S1, 18-A-443-S1
Per Emission Point:

(2) An exceedance of the indicator opacity of "No Visible Emissions" will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

Operating Requirements with Associated Recordkeeping

All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the Department. Records shall be legible and maintained in an orderly manner. The operating requirements and associated recordkeeping for this permit shall be:

A. The owner or operator shall not emit more than 0.20 kg VOC per kg of coating solids on a weighted average basis for one calendar month, as specified per 40 CFR §60.442(a)(1). On a monthly basis, the owner or operator shall calculate the weighted average of the mass of solvent used per mass of coating solids applied per the methodology specified in 40 CFR §60.443(a).

B. The owner or operator shall meet all applicable monitoring and recordkeeping requirements for NSPS Subpart RR, as specified in 40 CFR §60.445.

C. The owner operator shall choose an applicable emission standard in 40 CFR §63.3320(b)(1) through 40 CFR §63.3320(b)(3) to meet. The owner or operator shall demonstrate compliance with these emission standards using one of the methodologies specified in Table 2 of 40 CFR §63.3370(a). The applicable compliance methodologies from Table 2 are specified in 40 CFR §63.3370(b), 40 CFR §63.3370(c), or 40 CFR §63.3370(d).

D. The owner or operator shall meet all applicable monitoring and recordkeeping requirements for NESHAP Subpart JJJJ, as specified in 40 CFR §63.3370 through 40 CFR §63.3410.

567 IAC 23.1(4)"cj"
40 CFR 60 Subpart RR
567 IAC 23.1(2)"qq"
**NSPS and NESHAP Requirements**

These emission units are subject to the requirements of the National Emission Standards for Hazardous Air Pollutants, 40 CFR 63 Subpart A, General Provisions and Subpart JJJJ, Paper and Other Web Coating, as applicable.

These emission units are subject to the requirements of 40 CFR 60 Subpart A, General Provisions and Subpart RR, "Standards of Performance for Pressure Sensitive Tape and Label Surface Coating Operations", as applicable. This unit is subject to the requirements of §60.442(a) as well as all other applicable sections of this subpart.

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that any of the emission point characteristics above are different than the values stated, the owner or operator shall submit a request either by electronic mail or written correspondence to the Department within thirty (30) days of the discovery to determine if a permit amendment is required, or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required?  Yes ☐ No ☑

Facility Maintained Operation & Maintenance Plan Required?  Yes ☐ No ☑

Compliance Assurance Monitoring (CAM) Plan Required?  Yes ☐ No ☑

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from each emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40% (1)
Authority for Requirement: DNR Construction Permits "See Table Above"
567 IAC 23.3(2)"d"
(1) An exceedance of the indicator opacity of no visible emissions will require the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.01 gr/dscf
Authority for Requirement: DNR Construction Permits "See Table Above"

Operational Limits & Reporting/Record keeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.
Records shall be kept on site for at least five years and shall be available for inspection by the Department.

A. The permittee shall maintain the following monthly records:
   i. The identification of each VOC-containing and HAP-containing material used in emission units listed in the List of Emission Units, Control Equip2NAment, Emission Points, and Permits Table.

B. Emission Units (EU AF7 B1, EU AF7 B2, EU AF7 S1 through EU AF7 S5, EU AF7 Surge 1 through EU AF7 Surge 5, EU AF7 Poly 3, EU AF7 Surfactant 1, EU AF7 Surfactant 2, EU AF7 M1 through EU AF7 M3, EU AF7 Pigment 1, EU AF7 Pigment 2, EU AF7 Tank A121, EU AF7 Tank A124, EU AF7 Top MLC, EU AF7 Bottom MLC, EU H Weigh Tank, EU B Weigh Tank, EU B Mix Tank, and EU B Store Tank) shall be limited to a maximum of 8.76 million gallons of combined VOC-containing and HAP-containing product per 12-month rolling period. The permittee shall maintain the following monthly records to show compliance with this permit:
   i. The amount, in gallons, of combined VOC-containing and HAP-containing products produced in emission units (EU AF7 B1, EU AF7 B2, EU AF7 S1 through EU AF7 S5, EU AF7 Surge 1 through EU AF7 Surge 5, EU AF7 Poly 3, EU AF7 Surfactant 1, EU AF7 Surfactant 2, EU AF7 M1 through EU AF7 M3, EU AF7 Pigment 1, EU AF7 Pigment 2, EU AF7 Tank A121, EU AF7 Tank A124, EU AF7 Top MLC, EU AF7 Bottom MLC, EU H Weigh Tank, EU B Weigh Tank, EU B Mix Tank, and EU B Store Tank).
ii. Calculate and record the combined 12-month rolling total of all VOC-containing and HAP-containing products produced in emission units (EU AF7 B1, EU AF7 B2, EU AF7 S1 through EU AF7 S5, EU AF7 Surge 1 through EU AF7 Surge 5, EU AF7 Poly 3, EU AF7 Surfactant 1, EU AF7 Surfactant 2, EU AF7 M1 through EU AF7 M3, EU AF7 Pigment 1, EU AF7 Pigment 2, EU AF7 Tank A121, EU AF7 Tank A124, EU AF7 Top MLC, EU AF7 Bottom MLC, EU H Weigh Tank, EU B Weigh Tank, EU B Mix Tank, and EU B Store Tank)

C. The owner or operator shall only use HAP-containing materials where the HAP(s) is considered a VOC(s). The owner or operator shall not use any surfactants containing HAPs.
   i. The owner or operator shall maintain Safety Data Sheets (SDS)s of all materials used in the emission unit, which clearly indicates the VOC and HAP content of the material.

D. The owner or operator shall not exceed the worst-case formulation emission factor for any product(s) reformulation and additional product(s). The worst-case formulation emission factor is based on the ambient pressure, ambient temperature, maximum volumetric flow rate, maximum VOC concentration of 85%, and maximum HAP concentration of 15%, where the HAP is considered a VOC.
   i. The owner or operator shall calculate the worst-case formulation emission factors for emission units (EU AF7 B1, EU AF7 B2, EU AF7 S1 through EU AF7 S5, EU AF7 Surge 1 through EU AF7 Surge 5, EU AF7 Poly 3, EU AF7 Surfactant 1, EU AF7 Surfactant 2, EU AF7 M1 through EU AF7 M3, EU AF7 Pigment 1, EU AF7 Pigment 2, EU AF7 Tank A121, EU AF7 Tank A124, EU AF7 Top MLC, EU AF7 Bottom MLC, EU H Weigh Tank, EU B Weigh Tank, EU B Mix Tank, and EU B Store Tank).
   ii. The worst-case formulation emission factors shall be kept onsite and provided to the Department, if requested.

E. The emission factors for each emission unit (EU AF7 B1, EU AF7 B2, EU AF7 S1 through EU AF7 S5, EU AF7 Surge 1 through EU AF7 Surge 5, EU AF7 Poly 3, EU AF7 Surfactant 1, EU AF7 Surfactant 2, EU AF7 M1 through EU AF7 M3, EU AF7 Pigment 1, EU AF7 Pigment 2, EU AF7 Tank A121, EU AF7 Tank A124, EU AF7 Top MLC, EU AF7 Bottom MLC, EU H Weigh Tank, EU B Weigh Tank, EU B Mix Tank, and EU B Store Tank) shall be calculated by using the methodology specified in Emission Inventory Improvement Program (EIIP) Volume II Chapter 16: Methods of Estimating Air Emissions from Chemical Manufacturing Facilities, February 2005 version.

**Emission Point Characteristics**

IV. Emission Points Without Specific Conditions

The following emission units do not have any specific emissions limits, therefore monitoring is not required. The emission units are grandfathered from construction permitting until a modification takes place. The owner/operator shall comply with all applicable requirements that become effective during the permit term.

V. General Conditions
This permit is issued under the authority of the Iowa Code subsection 455B.133(8) and in accordance with 567 Iowa Administrative Code chapter 22.

G1. Duty to Comply
1. The permittee must comply with all conditions of the Title V permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action; for a permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. 567 IAC 22.108(9)"a"
2. Any compliance schedule shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based. 567 IAC 22.105 (2)"h"(3)
3. Where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be enforceable by the administrator and are incorporated into this permit. 567 IAC 22.108 (1)"b"
4. Unless specified as either "state enforceable only" or "local program enforceable only", all terms and conditions in the permit, including provisions to limit a source's potential to emit, are enforceable by the administrator and citizens under the Act. 567 IAC 22.108 (14)
5. It shall not be a defense for a permittee, in an enforcement action, that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit. 567 IAC 22.108 (9)"b"
6. For applicable requirements with which the permittee is in compliance, the permittee shall continue to comply with such requirements. For applicable requirements that will become effective during the permit term, the permittee shall meet such requirements on a timely basis. 567 IAC 22.108(15)"e"

G2. Permit Expiration
1. Except as provided in rule 567—22.104(455B), permit expiration terminates a source’s right to operate unless a timely and complete application for renewal has been submitted in accordance with rule 567—22.105(455B). 567 IAC 22.116(2)
2. To be considered timely, the owner, operator, or designated representative (where applicable) of each source required to obtain a Title V permit shall submit on forms or electronic format specified by the Department to the Air Quality Bureau, Iowa Department of Natural Resources, Air Quality Bureau, Wallace State Office Building, 502 E 9th St., Des Moines, IA 50319-0034, two copies (three if your facility is located in Linn or Polk county) of a complete permit application, at least 6 months but not more than 18 months prior to the date of permit expiration. An additional copy must also be sent to U.S. EPA Region VII, Attention: Chief of Air Permitting & Standards Branch, 11201 Renner Blvd., Lenexa, KS 66219. Additional copies to local programs or EPA are not required for application materials submitted through the electronic format specified by the Department. The application must include all emission points, emission units, air pollution control equipment, and monitoring devices at the facility. All emissions generating activities, including fugitive emissions, must be included. The definition of a complete application is as indicated in 567 IAC 22.105. 567 IAC 22.105

G3. Certification Requirement for Title V Related Documents
Any application, report, compliance certification or other document submitted pursuant to this permit shall contain certification by a responsible official of truth, accuracy, and completeness. All certifications shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. 567 IAC 22.107 (4)
G4. Annual Compliance Certification
By March 31 of each year, the permittee shall submit compliance certifications for the previous calendar year. The certifications shall include descriptions of means to monitor the compliance status of all emissions sources including emissions limitations, standards, and work practices in accordance with applicable requirements. The certification for a source shall include the identification of each term or condition of the permit that is the basis of the certification; the compliance status; whether compliance was continuous or intermittent; the method(s) used for determining the compliance status of the source, currently and over the reporting period consistent with all applicable department rules. For sources determined not to be in compliance at the time of compliance certification, a compliance schedule shall be submitted which provides for periodic progress reports, dates for achieving activities, milestones, and an explanation of why any dates were missed and preventive or corrective measures. The compliance certification shall be submitted to the administrator, director, and the appropriate DNR Field office. 567 IAC 22.108 (15)"e"

G5. Semi-Annual Monitoring Report
By March 31 and September 30 of each year, the permittee shall submit a report of any monitoring required under this permit for the 6 month periods of July 1 to December 31 and January 1 to June 30, respectively. All instances of deviations from permit requirements must be clearly identified in these reports, and the report must be signed by a responsible official, consistent with 567 IAC 22.107(4). The semi-annual monitoring report shall be submitted to the director and the appropriate DNR Field office. 567 IAC 22.108 (5)

G6. Annual Fee
1. The permittee is required under subrule 567 IAC 22.106 to pay an annual fee based on the total tons of actual emissions of each regulated air pollutant. Beginning July 1, 1996, Title V operating permit fees will be paid on July 1 of each year. The fee shall be based on emissions for the previous calendar year.
2. The fee amount shall be calculated based on the first 4,000 tons of each regulated air pollutant emitted each year. The fee to be charged per ton of pollutant will be available from the department by June 1 of each year. The Responsible Official will be advised of any change in the annual fee per ton of pollutant.
3. The emissions inventory shall be submitted annually by March 31 through the electronic format specified by the department documenting actual emissions for the previous calendar year.
4. The fee shall be submitted annually by July 1 with forms specified by the department.
5. If there are any changes to the emission calculation form, the department shall make revised forms available to the public by January 1. If revised forms are not available by January 1, forms from the previous year may be used and the year of emissions documented changed. The department shall calculate the total statewide Title V emissions for the prior calendar year and make this information available to the public no later than April 30 of each year.
6. Phase I acid rain affected units under section 404 of the Act shall not be required to pay a fee for emissions which occur during the years 1993 through 1999 inclusive.
7. The fee for a portable emissions unit or stationary source which operates both in Iowa and out of state shall be calculated only for emissions from the source while operating in Iowa.
8. Failure to pay the appropriate Title V fee represents cause for revocation of the Title V permit as indicated in 567 IAC 22.115(1)"d".

G7. Inspection of Premises, Records, Equipment, Methods and Discharges
Upon presentation of proper credentials and any other documents as may be required by law, the permittee shall allow the director or the director's authorized representative to:
1. Enter upon the permittee's premises where a Title V source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
3. Inspect, at reasonable times, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
4. Sample or monitor, at reasonable times, substances or parameters for the purpose of ensuring compliance with the permit or other applicable requirements. 567 IAC 22.108 (15)"b"

G8. Duty to Provide Information
The permittee shall furnish to the director, within a reasonable time, any information that the director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee also shall furnish to the director copies of records required to be kept by the permit, or for information claimed to be confidential, the permittee shall furnish such records directly to the administrator of EPA along with a claim of confidentiality. 567 IAC 22.108 (9)"e"

G9. General Maintenance and Repair Duties
The owner or operator of any air emission source or control equipment shall:
1. Maintain and operate the equipment or control equipment at all times in a manner consistent with good practice for minimizing emissions.
2. Remedy any cause of excess emissions in an expeditious manner.
3. Minimize the amount and duration of any excess emission to the maximum extent possible during periods of such emissions. These measures may include but not be limited to the use of clean fuels, production cutbacks, or the use of alternate process units or, in the case of utilities, purchase of electrical power until repairs are completed.
4. Schedule, at a minimum, routine maintenance of equipment or control equipment during periods of process shutdowns to the maximum extent possible. 567 IAC 24.2(1)

G10. Recordkeeping Requirements for Compliance Monitoring
1. In addition to any source specific recordkeeping requirements contained in this permit, the permittee shall maintain the following compliance monitoring records, where applicable:
   a. The date, place and time of sampling or measurements
   b. The date the analyses were performed.
   c. The company or entity that performed the analyses.
   d. The analytical techniques or methods used.
   e. The results of such analyses; and
   f. The operating conditions as existing at the time of sampling or measurement.
   g. The records of quality assurance for continuous compliance monitoring systems (including but not limited to quality control activities, audits and calibration drifts.)
2. The permittee shall retain records of all required compliance monitoring data and support information for a period of at least 5 years from the date of compliance monitoring sample, measurement report or application. Support information includes all calibration and maintenance records and all original strip chart recordings for continuous compliance monitoring, and copies of all reports required by the permit.
3. For any source which in its application identified reasonably anticipated alternative operating scenarios, the permittee shall:
   a. Comply with all terms and conditions of this permit specific to each alternative scenario.
   b. Maintain a log at the permitted facility of the scenario under which it is operating.
c. Consider the permit shield, if provided in this permit, to extend to all terms and conditions under each operating scenario. 567 IAC 22.108(4), 567 IAC 22.108(12)

G11. Evidence used in establishing that a violation has or is occurring.
Notwithstanding any other provisions of these rules, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any provisions herein.
1. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at a source:
   a. A monitoring method approved for the source and incorporated in an operating permit pursuant to 567 Chapter 22;
   b. Compliance test methods specified in 567 Chapter 25; or
   c. Testing or monitoring methods approved for the source in a construction permit issued pursuant to 567 Chapter 22.
2. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring, or information gathering methods:
   a. Any monitoring or testing methods provided in these rules; or
   b. Other testing, monitoring, or information gathering methods that produce information comparable to that produced by any method in subrule 21.5(1) or this subrule. 567 IAC 21.5(1)-567 IAC 21.5(2)

If the permittee is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permittee shall notify the department of this requirement. The plan shall be filed with all appropriate authorities by the deadline specified by EPA. A certification that this risk management plan is being properly implemented shall be included in the annual compliance certification of this permit. 567 IAC 22.108(6)

G13. Hazardous Release
The permittee must report any situation involving the actual, imminent, or probable release of a hazardous substance into the atmosphere which, because of the quantity, strength and toxicity of the substance, creates an immediate or potential danger to the public health, safety or to the environment. A verbal report shall be made to the department at (515) 725-8694 and to the local police department or the office of the sheriff of the affected county as soon as possible but not later than six hours after the discovery or onset of the condition. This verbal report must be followed up with a written report as indicated in 567 IAC 131.2(2). 567 IAC Chapter 131-State Only

G14. Excess Emissions and Excess Emissions Reporting Requirements
1. Excess Emissions. Excess emission during a period of startup, shutdown, or cleaning of control equipment is not a violation of the emission standard if the startup, shutdown or cleaning is accomplished expeditiously and in a manner consistent with good practice for minimizing emissions. Cleaning of control equipment which does not require the shutdown of the process equipment shall be limited to one six-minute period per one-hour period. An incident of excess emission (other than an incident during startup, shutdown or cleaning of control equipment) is a violation. If the owner or operator of a source maintains that the incident of excess emission was due to a malfunction, the owner or operator must show that the conditions which caused the incident of excess emission were not preventable by reasonable maintenance and control measures. Determination of any subsequent enforcement action will be made following review of this report. If excess emissions are occurring, either the control equipment causing the excess emission shall be repaired in an expeditious manner or the process generating the emissions shall
be shutdown within a reasonable period of time. An expeditious manner is the time necessary to
determine the cause of the excess emissions and to correct it within a reasonable period of time.
A reasonable period of time is eight hours plus the period of time required to shut down the
process without damaging the process equipment or control equipment. A variance from this
subrule may be available as provided for in Iowa Code section 455B.143. In the case of an
electric utility, a reasonable period of time is eight hours plus the period of time until comparable
Generating capacity is available to meet consumer demand with the affected unit out of service,
unless, the director shall, upon investigation, reasonably determine that continued operation
constitutes an unjustifiable environmental hazard and issue an order that such operation is not in
the public interest and require a process shutdown to commence immediately.
2. Excess Emissions Reporting
   a. Initial Reporting of Excess Emissions. An incident of excess emission (other than an
      incident of excess emission during a period of startup, shutdown, or cleaning) shall be
      reported to the appropriate field office of the department within eight hours of, or at the
      start of the first working day following the onset of the incident. The reporting exemption
      for an incident of excess emission during startup, shutdown or cleaning does not relieve
      the owner or operator of a source with continuous monitoring equipment of the obligation
      of submitting reports required in 567-subrule 25.1(6). An initial report of excess emission
      is not required for a source with operational continuous monitoring equipment (as
      specified in 567-subrule 25.1(1) ) if the incident of excess emission continues for less
      than 30 minutes and does not exceed the applicable emission standard by more than 10
      percent or the applicable visible emission standard by more than 10 percent opacity. The
      initial report may be made by electronic mail (E-mail), in person, or by telephone and
      shall include as a minimum the following:
      i. The identity of the equipment or source operation from which the excess
         emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and expected duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps being taken to remedy the excess emission.
      vi. The steps being taken to limit the excess emission in the interim period.
   b. Written Reporting of Excess Emissions. A written report of an incident of excess
      emission shall be submitted as a follow-up to all required initial reports to the department
      within seven days of the onset of the upset condition, and shall include as a minimum the
      following:
      i. The identity of the equipment or source operation point from which the excess
         emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps that were taken to remedy and to prevent the recurrence of the
         incident of excess emission.
      vi. The steps that were taken to limit the excess emission.
      vii. If the owner claims that the excess emission was due to malfunction,
          documentation to support this claim. 567 IAC 24.1(1)-567 IAC 24.1(4)
3. Emergency Defense for Excess Emissions. For the purposes of this permit, an “emergency”
means any situation arising from sudden and reasonably unforeseeable events beyond the control
of the source, including acts of God, which situation requires immediate corrective action to
restore normal operation, and that causes the source to exceed a technology-based emission
limitation under the permit due to unavoidable increases in emissions attributable to the
emergency. An emergency shall not include non-compliance, to the extent caused by improperly
designed equipment, lack of preventive maintenance, careless or improper operation or operator
error. An emergency constitutes an affirmative defense to an action brought for non-compliance
with technology based limitations if it can be demonstrated through properly signed
contemporaneous operating logs or other relevant evidence that:

a. An emergency occurred and that the permittee can identify the cause(s) of the emergency;
b. The facility at the time was being properly operated;
c. During the period of the emergency, the permittee took all reasonable steps to
minimize levels of emissions that exceeded the emissions standards or other requirements
of the permit; and
d. The permittee submitted notice of the emergency to the director by certified mail
within two working days of the time when the emissions limitations were exceeded due
to the emergency. This notice fulfills the requirement of paragraph 22.108(5)"b." – See
G15. This notice must contain a description of the emergency, any steps taken to mitigate
emissions, and corrective actions taken.

In any enforcement proceeding, the permittee seeking to establish the occurrence of an
emergency has the burden of proof. This provision is in addition to any emergency or upset
provision contained in any applicable requirement. 567 IAC 22.108(16)

G15. Permit Deviation Reporting Requirements
A deviation is any failure to meet a term, condition or applicable requirement in the permit.
Reporting requirements for deviations that result in a hazardous release or excess emissions have
been indicated above (see G13 and G14). Unless more frequent deviation reporting is specified
in the permit, any other deviation shall be documented in the semi-annual monitoring report and
the annual compliance certification (see G4 and G5). 567 IAC 22.108(5)"b"

G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP
Regulations
During the term of this permit, the permittee must notify the department of any source that
becomes subject to a standard or other requirement under 567-subrule 23.1(2) (standards of
performance of new stationary sources) or section 111 of the Act; or 567-subrule 23.1(3)
(emissions standards for hazardous air pollutants), 567-subrule 23.1(4) (emission standards for
hazardous air pollutants for source categories) or section 112 of the Act. This notification shall
be submitted in writing to the department pursuant to the notification requirements in 40 CFR
Section 60.7, 40 CFR Section 61.07, and/or 40 CFR Section 63.9. 567 IAC 23.1(2), 567 IAC
23.1(3), 567 IAC 23.1(4)

G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V
Permit Modification
1. Off Permit Changes to a Source. Pursuant to section 502(b)(10) of the CAAA, the permittee
may make changes to this installation/facility without revising this permit if:
   a. The changes are not major modifications under any provision of any program required
by section 110 of the Act, modifications under section 111 of the act, modifications under
section 112 of the act, or major modifications as defined in 567 IAC Chapter 22.
b. The changes do not exceed the emissions allowable under the permit (whether
expressed therein as a rate of emissions or in terms of total emissions);
c. The changes are not modifications under any provisions of Title I of the Act and the changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or as total emissions);

d. The changes are not subject to any requirement under Title IV of the Act (revisions affecting Title IV permitting are addressed in rules 567—22.140(455B) through 567 - 22.144(455B));

e. The changes comply with all applicable requirements.

f. For each such change, the permitted source provides to the department and the administrator by certified mail, at least 30 days in advance of the proposed change, a written notification, including the following, which must be attached to the permit by the source, the department and the administrator:

i. A brief description of the change within the permitted facility,

ii. The date on which the change will occur,

iii. Any change in emission as a result of that change,

iv. The pollutants emitted subject to the emissions trade

v. If the emissions trading provisions of the state implementation plan are invoked, then Title V permit requirements with which the source shall comply; a description of how the emissions increases and decreases will comply with the terms and conditions of the Title V permit.

vi. A description of the trading of emissions increases and decreases for the purpose of complying with a federally enforceable emissions cap as specified in and in compliance with the Title V permit; and

vii. Any permit term or condition no longer applicable as a result of the change.

567 IAC 22.110(1)

2. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), record keeping, reporting, or compliance certification requirements. 567 IAC 22.110(2)

3. Notwithstanding any other part of this rule, the director may, upon review of a notice, require a stationary source to apply for a Title V permit if the change does not meet the requirements of subrule 22.110(1). 567 IAC 22.110(3)

4. The permit shield provided in subrule 22.108(18) shall not apply to any change made pursuant to this rule. Compliance with the permit requirements that the source will meet using the emissions trade shall be determined according to requirements of the state implementation plan authorizing the emissions trade. 567 IAC 22.110(4)

5. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes, for changes that are provided for in this permit. 567 IAC 22.108(11)

G18. Duty to Modify a Title V Permit

1. Administrative Amendment.

a. An administrative permit amendment is a permit revision that does any of the following:

i. Correct typographical errors

ii. Identify a change in the name, address, or telephone number of any person identified in the permit, or provides a similar minor administrative change at the source;

iii. Require more frequent monitoring or reporting by the permittee; or
iv. Allow for a change in ownership or operational control of a source where the director determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new permittee has been submitted to the director.

b. The permittee may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request. The request shall be submitted to the director.

c. Administrative amendments to portions of permits containing provisions pursuant to Title IV of the Act shall be governed by regulations promulgated by the administrator under Title IV of the Act.

2. Minor Title V Permit Modification.

a. Minor Title V permit modification procedures may be used only for those permit modifications that satisfy all of the following:

i. Do not violate any applicable requirement;

ii. Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the Title V permit;

iii. Do not require or change a case by case determination of an emission limitation or other standard, or an increment analysis;

iv. Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed in order to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include any federally enforceable emissions caps which the source would assume to avoid classification as a modification under any provision under Title I of the Act; and an alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act;

v. Are not modifications under any provision of Title I of the Act; and

vi. Are not required to be processed as significant modification under rule 567 - 22.113(455B).

b. An application for minor permit revision shall be on the minor Title V modification application form and shall include at least the following:

i. A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;

ii. The permittee's suggested draft permit;

iii. Certification by a responsible official, pursuant to 567 IAC 22.107(4), that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and

iv. Completed forms to enable the department to notify the administrator and the affected states as required by 567 IAC 22.107(7).

c. The permittee may make the change proposed in its minor permit modification application immediately after it files the application. After the permittee makes this change and until the director takes any of the actions specified in 567 IAC 22.112(4) "a" to "c", the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time, the permittee need not comply with the existing permit terms and conditions it seeks to modify. However, if the permittee fails to comply with its proposed permit terms and conditions
during this time period, the existing permit terms and conditions it seeks to modify may be enforced against the facility.

3. Significant Title V Permit Modification.
Significant Title V modification procedures shall be used for applications requesting Title V permit modifications that do not qualify as minor Title V modifications or as administrative amendments. These include but are not limited to all significant changes in monitoring permit terms, every relaxation of reporting or recordkeeping permit terms, and any change in the method of measuring compliance with existing requirements. Significant Title V modifications shall meet all requirements of 567 IAC Chapter 22, including those for applications, public participation, review by affected states, and review by the administrator, as those requirements that apply to Title V issuance and renewal.
The permittee shall submit an application for a significant permit modification not later than three months after commencing operation of the changed source unless the existing Title V permit would prohibit such construction or change in operation, in which event the operation of the changed source may not commence until the department revises the permit. 567 IAC 22.111-567 IAC 22.113

G19. Duty to Obtain Construction Permits
Unless exempted in 567 IAC 22.1(2) or to meet the parameters established in 567 IAC 22.1(1)c, the permittee shall not construct, install, reconstruct or alter any equipment, control equipment or anaerobic lagoon without first obtaining a construction permit, or conditional permit, or permit pursuant to rule 567 IAC 22.8, or permits required pursuant to rules 567 IAC 22.4, 567 IAC 22.5, 567 IAC 31.3, and 567 IAC 33.3 as required in 567 IAC 22.1(1). A permit shall be obtained prior to the initiation of construction, installation or alteration of any portion of the stationary source or anaerobic lagoon. 567 IAC 22.1(1)

G20. Asbestos
The permittee shall comply with 567 IAC 23.1(3)a, and 567 IAC 23.2(3)g when activities involve asbestos mills, surfacing of roadways, manufacturing operations, fabricating, insulating, waste disposal, spraying applications, demolition and renovation operations (567 IAC 23.1(3)a); training fires and controlled burning of a demolished building (567 IAC 23.2).

G21. Open Burning
The permittee is prohibited from conducting open burning, except as provided in 567 IAC 23.2. 567 IAC 23.2 except 23.2(3)j; 567 IAC 23.2(3)j - State Only

G22. Acid Rain (Title IV) Emissions Allowances
The permittee shall not exceed any allowances that it holds under Title IV of the Act or the regulations promulgated there under. Annual emissions of sulfur dioxide in excess of the number of allowances to emit sulfur dioxide held by the owners and operators of the unit or the designated representative of the owners and operators is prohibited. Exceedences of applicable emission rates are prohibited. “Held” in this context refers to both those allowances assigned to the owners and operators by USEPA, and those allowances supplementally acquired by the owners and operators. The use of any allowance prior to the year for which it was allocated is prohibited. Contravention of any other provision of the permit is prohibited. 567 IAC 22.108(7)

G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements
1. The permittee shall comply with the standards for labeling of products using ozone-depleting substances pursuant to 40 CFR Part 82, Subpart E:
   a. All containers in which a class I or class II substance is stored or transported, all products containing a class I substance, and all products directly manufactured with a class I substance must bear the required warning statement if it is being introduced into
interstate commerce pursuant to § 82.106.
b. The placement of the required warning statement must comply with the requirements pursuant to § 82.108.
c. The form of the label bearing the required warning statement must comply with the requirements pursuant to § 82.110.
d. No person may modify, remove, or interfere with the required warning statement except as described in § 82.112.

2. The permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 CFR Part 82, Subpart F, except as provided for MVACs in Subpart B:
   a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to § 82.156.
   b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to § 82.158.
   c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to § 82.161.
   d. Persons disposing of small appliances, MVACs, and MVAC-like appliances must comply with reporting and recordkeeping requirements pursuant to § 82.166. ("MVAC-like appliance" as defined at § 82.152)
   e. Persons owning commercial or industrial process refrigeration equipment must comply with the leak repair requirements pursuant to § 82.156.
   f. Owners/operators of appliances normally containing 50 or more pounds of refrigerant must keep records of refrigerant purchased and added to such appliances pursuant to § 82.166.

3. If the permittee manufactures, transforms, imports, or exports a class I or class II substance, the permittee is subject to all the requirements as specified in 40 CFR part 82, Subpart A, Production and Consumption Controls.

4. If the permittee performs a service on motor (fleet) vehicles when this service involves ozone-depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term "MVAC" as used in Subpart B does not include the air-tight sealed refrigeration system used as refrigerated cargo, or system used on passenger buses using HCFC-22 refrigerant.

5. The permittee shall be allowed to switch from any ozone-depleting or greenhouse gas generating substances to any alternative that is listed in the Significant New Alternatives Program (SNAP) promulgated pursuant to 40 CFR part 82, Subpart G, Significant New Alternatives Policy Program. 40 CFR part 82

G24. Permit Reopenings
1. This permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. 567 IAC 22.108(9)"c"

2. Additional applicable requirements under the Act become applicable to a major part 70 source with a remaining permit term of 3 or more years. Revisions shall be made as expeditiously as practicable, but not later than 18 months after the promulgation of such standards and regulations.
a. Reopening and revision on this ground is not required if the permit has a remaining term of less than three years;
b. Reopening and revision on this ground is not required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions have been extended pursuant to 40 CFR 70.4(b)(10)(i) or (ii) as amended to May 15, 2001.
c. Reopening and revision on this ground is not required if the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. 567 IAC 22.108(17)”a”, 567 IAC 22.108(17)”b”

3. A permit shall be reopened and revised under any of the following circumstances:
   a. The department receives notice that the administrator has granted a petition for disapproval of a permit pursuant to 40 CFR 70.8(d) as amended to July 21, 1992, provided that the reopening may be stayed pending judicial review of that determination;
   b. The department or the administrator determines that the Title V permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the Title V permit;
   c. Additional applicable requirements under the Act become applicable to a Title V source, provided that the reopening on this ground is not required if the permit has a remaining term of less than three years, the effective date of the requirement is later than the date on which the permit is due to expire, or the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. Such a reopening shall be complete not later than 18 months after promulgation of the applicable requirement.
   d. Additional requirements, including excess emissions requirements, become applicable to a Title IV affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.
   e. The department or the administrator determines that the permit must be revised or revoked to ensure compliance by the source with the applicable requirements. 567 IAC 22.114(1)

4. Proceedings to reopen and reissue a Title V permit shall follow the procedures applicable to initial permit issuance and shall effect only those parts of the permit for which cause to reopen exists. 567 IAC 22.114(2)

5. A notice of intent shall be provided to the Title V source at least 30 days in advance of the date the permit is to be reopened, except that the director may provide a shorter time period in the case of an emergency. 567 IAC 22.114(3)

G25. Permit Shield
1. The director may expressly include in a Title V permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:
   a. Such applicable requirements are included and are specifically identified in the permit; or
   b. The director, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.
2. A Title V permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

3. A permit shield shall not alter or affect the following:
   a. The provisions of Section 303 of the Act (emergency orders), including the authority of the administrator under that section;
   b. The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
   c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the Act;
   d. The ability of the department or the administrator to obtain information from the facility pursuant to Section 114 of the Act. 567 IAC 22.108 (18)

G26. Severability
The provisions of this permit are severable and if any provision or application of any provision is found to be invalid by this department or a court of law, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected by such finding. 567 IAC 22.108 (8)

G27. Property Rights
The permit does not convey any property rights of any sort, or any exclusive privilege. 567 IAC 22.108 (9)"d"

G28. Transferability
This permit is not transferable from one source to another. If title to the facility or any part of it is transferred, an administrative amendment to the permit must be sought consistent with the requirements of 567 IAC 22.111(1). 567 IAC 22.111 (1)"d"

G29. Disclaimer
No review has been undertaken on the engineering aspects of the equipment or control equipment other than the potential of that equipment for reducing air contaminant emissions. 567 IAC 22.3(3)"c"

G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification
The permittee shall notify the department's stack test contact in writing not less than 30 days before a required test or performance evaluation of a continuous emission monitor is performed to determine compliance with applicable requirements of 567 – Chapter 23 or a permit condition. Such notice shall include the time, the place, the name of the person who will conduct the test and other information as required by the department. Upon written request, the department may allow a notification period of less than 30 days. At the department’s request, a pretest meeting shall be held not later than 15 days prior to conducting the compliance demonstration. A testing protocol shall be submitted to the department no later than 15 days before the owner or operator conducts the compliance demonstration. A representative of the department shall be permitted to witness the tests. Results of the tests shall be submitted in writing to the department's stack test contact in the form of a comprehensive report within six weeks of the completion of the testing. Compliance tests conducted pursuant to this permit shall be conducted with the source operating in a normal manner at its maximum continuous output as rated by the equipment manufacturer, or the rate specified by the owner as the maximum production rate at which the source shall be operated. In cases where compliance is to be demonstrated at less than the maximum continuous output as rated by the equipment manufacturer, and it is the owner's intent to limit the capacity to that
rating, the owner may submit evidence to the department that the source has been physically altered so that capacity cannot be exceeded, or the department may require additional testing, continuous monitoring, reports of operating levels, or any other information deemed necessary by the department to determine whether such source is in compliance. Stack test notifications, reports and correspondence shall be sent to:

Stack Test Review Coordinator
Iowa DNR, Air Quality Bureau
Wallace State Office Building
502 E 9th St.
Des Moines, IA 50319-0034
(515) 725-9526

Within Polk and Linn Counties, stack test notifications, reports and correspondence shall also be directed to the supervisor of the respective county air pollution program.

567 IAC 25.1(7)“a”, 567 IAC 25.1(9)

G31. Prevention of Air Pollution Emergency Episodes
The permittee shall comply with the provisions of 567 IAC Chapter 26 in the prevention of excessive build-up of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these contaminants on the health of persons.

567 IAC 26.1(1)

G32. Contacts List
The current address and phone number for reports and notifications to the EPA administrator is:

Iowa Compliance Officer
Air Branch
Enforcement and Compliance Assurance Division
U.S. EPA Region 7
11201 Renner Blvd.
Lenexa, KS 66219
(913) 551-7020

The current address and phone number for reports and notifications to the department or the Director is:

Chief, Air Quality Bureau
Iowa Department of Natural Resources
Wallace State Office Building
502 E 9th St.
Des Moines, IA 50319-0034
(515) 725-8200
Reports or notifications to the DNR Field Offices or local programs shall be directed to the supervisor at the appropriate field office or local program. Current addresses and phone numbers are:

**Field Office 1**
1101 Commercial Court, Suite 10  
Manchester, IA 52057  
(563) 927-2640

**Field Office 2**
2300-15th St., SW  
Mason City, IA 50401  
(641) 424-4073

**Field Office 3**
1900 N. Grand Ave.  
Spencer, IA 51301  
(712) 262-4177

**Field Office 4**
1401 Sunnyside Lane  
Atlantic, IA 50022  
(712) 243-1934

**Field Office 5**
Wallace State Office Building  
502 E 9th St.  
Des Moines, IA 50319-0034  
(515) 725-0268

**Field Office 6**
1023 West Madison Street  
Washington, IA 52353-1623  
(319) 653-2135

**Polk County Public Works Dept.**  
Air Quality Division  
5885 NE 14th St.  
Des Moines, IA 50313  
(515) 286-3351

**Linn County Public Health**  
Air Quality Branch  
1020 6th St SE  
Cedar Rapids, IA 52401  
(319) 892-6011
