Iowa Department of Natural Resources
Title V Operating Permit

Name of Permitted Facility: Bayer CropScience LP – Muscatine 3670
Facility Location: 2500 Wiggins Road, Muscatine, IA 52761
Air Quality Operating Permit Number: 04-TV-002R3
Expiration Date: September 19, 2027
Permit Renewal Application Deadline: March 19, 2027

EIQ Number: 92-3670
Facility File Number: 70-01-008

Responsible Official
Name: Silvia Malaman
Title: Site Manager
Mailing Address: P.O. Box 473, Muscatine, IA 52761
Phone #: 563-263-0093

Permit Contact Person for the Facility
Name: Mae Thomas
Title: Lead Environmental Engineer
Mailing Address: P.O. Box 473, Muscatine, IA 52761
Phone #: 563-262-7378

This permit is issued in accordance with 567 Iowa Administrative Code Chapter 22, and is issued subject to the terms and conditions contained in this permit.

For the Director of the Department of Natural Resources

Marnie Stein, Supervisor of Air Operating Permits Section

9/20/2022

II. Plant-Wide Conditions

Facility Name: Bayer CropScience LP - Muscatine
Permit Number: 04-TV-002R3

Permit conditions are established in accord with 567 Iowa Administrative Code rule 22.108

Permit Duration

The term of this permit is: Five (5) years from permit issuance
Commencing on: September 20, 2022
Ending on: September 19, 2027

Amendments, modifications and reopenings of the permit shall be obtained in accordance with 567 Iowa Administrative Code rules 22.110 - 22.114. Permits may be suspended, terminated, or revoked as specified in 567 Iowa Administrative Code Rules 22.115.

Emission Limits

Unless specified otherwise in the Source Specific Conditions, the following limitations and supporting regulations apply to all emission points at this plant:

Opacity (visible emissions): 40% opacity
Authority for Requirement: 567 IAC 23.3(2)"d"

Sulfur Dioxide (SO₂): 500 parts per million by volume
Authority for Requirement: 567 IAC 23.3(3)"e"

Particulate Matter:
No person shall cause or allow the emission of particulate matter from any source in excess of the emission standards specified in this chapter, except as provided in 567 – Chapter 24. For sources constructed, modified or reconstructed on or after July 21, 1999, the emission of particulate matter from any process shall not exceed an emission standard of 0.1 grain per dry standard cubic foot of exhaust gas, except as provided in 567 – 21.2(455B), 23.1(455B), 23.4(455B) and 567 – Chapter 24.
For sources constructed, modified or reconstructed prior to July 21, 1999, the emission of particulate matter from any process shall not exceed the amount determined from Table I, or amount specified in a permit if based on an emission standard of 0.1 grain per standard cubic foot of exhaust gas or established from standards provided in 23.1(455B) and 23.4(455B). Authority for Requirement: 567 IAC 23.3(2)"a"
Fugitive Dust: Attainment and Unclassified Areas - A person shall take reasonable precautions to prevent particulate matter from becoming airborne in quantities sufficient to cause a nuisance as defined in Iowa Code section 657.1 when the person allows, causes or permits any materials to be handled, transported or stored or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, with the exception of farming operations or dust generated by ordinary travel on unpaved roads. Ordinary travel includes routine traffic and road maintenance activities such as scarifying, compacting, transporting road maintenance surfacing material, and scraping of the unpaved public road surface. (the preceding sentence is State Only) All persons, with the above exceptions, shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate. The public highway authority shall be responsible for taking corrective action in those cases where said authority has received complaints of or has actual knowledge of dust conditions which require abatement pursuant to this subrule. Reasonable precautions may include, but not be limited to, the following procedures.

1. Use, where practical, of water or chemicals for control of dusts in the demolition of existing buildings or structures, construction operations, the grading of roads or the clearing of land.
2. Application of suitable materials, such as but not limited to asphalt, oil, water or chemicals on unpaved roads, material stockpiles, race tracks and other surfaces which can give rise to airborne dusts.
3. Installation and use of containment or control equipment, to enclose or otherwise limit the emissions resulting from the handling and transfer of dusty materials, such as but not limited to grain, fertilizer or limestone.
4. Covering, at all times when in motion, open-bodied vehicles transporting materials likely to give rise to airborne dusts.
5. Prompt removal of earth or other material from paved streets or to which earth or other material has been transported by trucking or earth-moving equipment, erosion by water or other means.
6. Reducing the speed of vehicles traveling over on-property surfaces as necessary to minimize the generation of airborne dusts.

Authority for Requirement: 567 IAC 23.3(2)"c"

NESHAP
Sources located at this facility are subject to 40 CFR 63 Subpart MMM – National Emission Standards for Hazardous Air Pollutants for Pesticide Active Ingredient Production. See "Emission Point-Specific Conditions" for specific emission units subject to the Subpart.
Authority for Requirement: 40 CFR 63 Subpart MMM
567 IAC 23.1(4)"bm"

Sources located at this facility are subject to 40 CFR 63 Subpart FFFF – National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing. See "Emission Point-Specific Conditions" for specific emission units subject to the Subpart.
Authority for Requirement: 40 CFR 63 Subpart FFFF
567 IAC 23.1(4)"cf"
Sources located at this facility are subject to 40 CFR 63 Subpart DDDDD – National Emissions Standards for Hazardous Air Pollutants for Major Sources: Industrial, and Institutional Boilers and Process Heaters. See "Emission Point-Specific Conditions" for specific emission units subject to the Subpart.
Authority for Requirement: 40 CFR 63 Subpart DDDDD

---

**Multiple Title V Permits**

Bayer CropScience LP has applied for three Title V permits for their Muscatine facility. The facility is considered as a whole with regard to applicability of various air permitting programs. This permit (04-TV-002R3) covers three process areas at the facility: the CAC, GT, and Multipurpose Units.

- The CAC Unit produces the herbicide intermediate chloroacetyl chloride (CAC). CAC is used at the facility to produce alachlor, acetochlor, butachlor, and MON1400.

- The Glyphosate Technical (GT) Unit produces two salts of glyphosate: amine salt, and potassium salt. These salt solutions are considered herbicide active ingredients.

- The Multipurpose Unit may be used to produce two products on a campaign basis. Part of the year, the unit may produce MON 13900 (furilazole), a seed safener that is blended with acetochlor for use in the formulation facilities. Additionally, the unit may manufacture MON 1400, an herbicide active ingredient. These products cannot be made simultaneously.

---

**Other Title V Permits**

DNR issued permit 04-TV-006R3 (for EIQ # 92-6908) to cover the Flowable Formulations and Liquid Formulations Units at this facility.

- The Flowable Formulations are typically water-based liquid herbicide formulations consisting of herbicide technical ingredients and other herbicide additives. Both microencapsulated and non-microencapsulated formulations are produced.

- The Liquid Formulations area formulates, packages, and ships herbicide products, herbicide technical active ingredients, and formulated herbicide premixes. The Liquid Formulations Facility packages and ships products in jugs, drums, shuttles, and mini-bulk containers. There are also facilities for providing bulk shipment of products in rail cars or tank trucks.
DNR issued permit 04-TV-010R2-M001 (for EIQ # 92-6909) to cover the A-Unit and Unit Services.

- The A-Unit Facility produces the acetanilide family of herbicides: alachlor, acetochlor and butachlor. These herbicide active ingredients are transferred to other areas in the plant where they are formulated into finished products and packaged.

- The Unit Services area provides utilities and wastewater treatment for the plant. This includes steam production, wastewater treatment, groundwater withdrawal, drinking water treatment, demineralized water supply to process operations and boiler feeds, and supply of utility chemicals (nitrogen, caustic, and ammonia).

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 40 %\(^{(1)}\)
Authority for Requirement: Iowa DNR Construction Permit 12-A-347-S1
567 IAC 23.3(2)"d"

\(^{(1)} An exceedance of the indicator opacity of "No visible emissions" will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances of the indicator continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: PM\(_{2.5}\)
Emission Limit: 0.24 lb/hr
Authority for Requirement: DNR Construction Permit 12-A-347-S1

Pollutant: Particulate Matter
Emission Limit: 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 12-A-347-S1
567 IAC 23.3(2)"a"

Pollutant: Sulfur Dioxide (SO\(_2\))
Emission Limit: 0.014 lb/hr, 500 ppmv
Authority for Requirement: DNR Construction Permit 12-A-347-S1
567 IAC 23.3(3)"c"

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Process throughput:
1. The CAC Ketene furnace shall combust only natural gas.
Reporting & Record keeping:
Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. The owner or operator shall keep records of conducted maintenance for the process heater and must, to the extent practicable, maintain and operate the process heater in a manner consistent with good air pollution control practice for minimizing emissions.

Authority for Requirement: DNR Construction Permit 12-A-347-S1

NESHAP:

**Emission Point Characteristics**
The emission point shall conform to the specifications listed below.

- Stack Height, (ft, from the ground): 114
- Stack Opening, (inches, dia.): 45.5
- Exhaust Flow Rate (scfm): 780
- Exhaust Temperature (°F): 1,300
- Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 12-A-347-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

- Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
- Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
- Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
### Emission Point ID Number: EP 38

(1) This Rated Capacity applies specifically to CAC Production. Emission factors used for Process Off-Gas are based on CAC Production.
Applicable Requirements

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40 %\(^{(2)}\)
Authority for Requirement: DNR Construction Permit 73-A-111-S9
567 IAC 23.4(12)"b"

\(^{(2)}\) An exceedance of the indicator opacity of 25% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: PM\(_{2.5}\)
Emission Limit(s): 0.10 lb/hr
Authority for Requirement: DNR Construction Permit 73-A-111-S9

Pollutant: Particulate Matter
Emission Limit(s): 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 73-A-111-S9
567 IAC 23.3(2)"a"

Pollutant: Volatile Organic Compounds (VOC's)
Emission Limit(s): 2.3 lb/hr
Authority for Requirement: DNR Construction Permit 73-A-111-S9

Pollutant: HCl & Cl\(_2\): For those streams under the MON MACT
Emission Limit(s): Reduce combined HCl/Cl\(_2\) by ≥ 99%; OR to an outlet concentration ≤ 20 ppmv;
OR reduce emissions rate to≤ 0.45 kg/hr.
Pollutant: Total Organic HAP: For those streams under the MON MACT
Emission Limit(s): Reduce by ≥ 98%; OR to an outlet concentration ≤ 20 ppmv TOC
Authority for Requirements: DNR Construction Permit 73-A-111-S9
40 CFR 63 Subpart FFFF
567 IAC 23.1(4)"cf"

Pollutant: HCl & Cl\(_2\): For those streams under the PAI MACT
Emission Limit(s): Reduce combined HCl/Cl\(_2\) for the sum of all subject vents by ≥ 94%; OR total HCl/Cl\(_2\) emissions shall not exceed 6.8 Mg/yr; OR reduce HCl/Cl\(_2\) emissions to an outlet concentration ≤ 20 ppmv.
Pollutant: Total Organic HAP: For those streams under the PAI MACT
Emission Limit(s): Reduce uncontrolled emissions from each process vent subject to 40 CFR 63.1362(b)(2)(ii)(A) by ≥ 98%; OR to an outlet concentration ≤ 20 ppmv.
Authority for Requirements: DNR Construction Permit 73-A-111-S9
40 CFR 63 Subpart MMM
567 IAC 23.1(4)"bm"
Operational Limits and Recordkeeping Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. The emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2), shall not vent through EP-38 without the CAC Process Incinerator (CE-11-114), the CAC Quench Pot (CE-11-115), and the CAC Incinerator Scrubber (CE-11-111) operating within the parameters established in the Operating Limits and Recordkeeping Requirements section of this permit.
   a. The owner or operator shall maintain a record of the date and duration of each instance where the emission units are vented without the CAC Process Incinerator (CE-11-114), the CAC Quench Pot (CE-11-115), and the CAC Incinerator Scrubber (CE-11-111) operating within the parameters established in the Operating Limits and Recordkeeping Requirements section of this permit.

CAC Incinerator Scrubber (CE-11-114)

1. When exhaust gases from the emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2), are vented to EP 38, the minimum daily average liquid flow rate, in gallons per minute, to the CAC Incinerator Scrubber shall not be less than the average liquid flow rate used during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) and PAI MACT (40 CFR 63 Subpart MMM) rules.
   a. The owner or operator shall maintain a record of the liquid flow rate to the CAC Incinerator Scrubber (CE-11-111). In accordance with the monitoring, recordkeeping, and reporting requirements of the MON (40 CFR 63 Subpart FFFF) and the PAI MACT (40 CFR 63 Subpart MMM), the liquid flow rate shall be recorded at intervals of 15 minutes or less while the CAC Incinerator Scrubber is controlling emissions from the Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2).
   b. As specified in the MON (40 CFR 63, Subpart FFFF) and the PAI MACT (40 CFR 63, Subpart MMM), the owner or operator shall calculate and record the daily average liquid flow rate for each calendar day the CAC Incinerator Scrubber is in operation.
   c. The owner or operator shall record the average liquid flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

2. When exhaust gases from the emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-
Gas (EU-13-514-2), are vented to EP 38, the minimum daily average pH, in standard pH units, for the effluent from the CAC Incinerator Scrubber shall not be less than the average effluent pH observed during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) and PAI MACT (40 CFR 63 Subpart MMM) rules.

a. The owner or operator shall maintain a record of the effluent pH from the CAC Incinerator Scrubber (CE-11-111). In accordance with the monitoring, recordkeeping, and reporting requirements of the MON (40 CFR 63 Subpart FFFF) and the PAI MACT (40 CFR 63 Subpart MMM), the effluent pH shall be recorded at intervals of 15 minutes or less while the CAC Incinerator Scrubber is controlling emissions from the Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2).

b. As specified in the MON (40 CFR 63, Subpart FFFF) and the PAI MACT (40 CFR 63, Subpart MMM), the owner or operator shall calculate and record the daily average pH of the effluent for each calendar day the CAC Incinerator Scrubber is in operation.

c. The owner or operator shall record the average pH of the effluent used during the stack test that demonstrated compliance with the permitted emission limits.

CAC Quench Pot (CE-11-115)

1. When exhaust gases from the emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2), are vented to EP 38, the minimum daily average Quench Pot (CE-11-115) water level, in gallons, shall not be less than the average Quench Pot (CE-11-115) water level observed during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) and PAI MACT (40 CFR 63 Subpart MMM) rules.

a. The owner or operator shall maintain a record of the Quench Pot (CE-11-115) water level, in gallons, monitored using a level indicator. In accordance with the monitoring, recordkeeping, and reporting requirements of the MON (40 CFR 63 Subpart FFFF) and the PAI MACT (40 CFR 63 Subpart MMM), the Quench Pot water level shall be recorded at intervals of 15 minutes or less while the Quench Pot is controlling emissions from the Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2).

b. As specified in the MON (40 CFR 63, Subpart FFFF) and the PAI MACT (40 CFR 63, Subpart MMM), the owner or operator shall calculate and record the daily average Quench Pot water level for each calendar day the CAC Incinerator Scrubber is in operation.

c. The owner or operator shall record the average Quench Pot water level of the effluent used during the stack test that demonstrated compliance with the permitted emission limits.
CAC Process Incinerator (CE-11-111)

1. When exhaust gases from the emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2), are vented to EP 38, the owner or operator shall maintain the CAC Process Incinerator at an instantaneous operating temperature of no less than 38 degrees Celsius below the average temperature recorded during the most recent performance test that demonstrated compliance with the VOC and HAP emission limits of this emission point.

   a. The owner or operator shall install, calibrate, operate, and maintain equipment necessary to continuously monitor the temperature of the CAC Process Incinerator (CE-11-111). This equipment shall be installed, operated, and maintained in accordance with the facility’s operation and maintenance plan.

   b. The owner or operator shall retain the most recent stack tests for the CAC Process Incinerator (CE 11-114) that demonstrated compliance with the VOC and HAP emission limits. The permittee shall document the average temperature recorded during those tests, and calculate and document the minimum temperature the CAC Process Incinerator (CE 11-114) shall operate above (38 degrees Celsius below the average temperature recorded during most recent the VOC and HAP performance test which demonstrated compliance with the VOC and HAP emission limits).

2. When exhaust gases from the emission units, Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2), are vented to EP 38, the owner or operator shall maintain the CAC incinerator at a minimum daily average temperature greater than the average temperature observed during the stack test, which demonstrated compliance with the emission limits as required under the MON (40 CFR 63 Subpart FFFF) and PAI MACT (40 CFR 63 Subpart MMM) rules.

   a. The owner or operator shall record the average temperature of the CAC Process Incinerator observed during the stack test that demonstrated compliance with the permitted emission limits.

   b. The owner or operator shall maintain a record of the temperature of the CAC Process Incinerator (CE 11-114). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF) and the PAI MACT (40 CFR 63 Subpart MMM), the temperature shall be recorded at an interval of at least once every 15 minutes while the incinerator is controlling emissions from the Light Ends Column (EU-11-111-2), CAC Unit Process Off-Gas (EU-11-S-1-2), MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), CAC Stripper (EU-01-0201), or the A-Unit Process Off-Gas (EU-13-514-2).

   c. As specified in the MON (40 CFR 63, Subpart FFFF) and the PAI MACT (40 CFR 63, Subpart MMM), the owner or operator shall calculate and record the daily average temperature for the incinerator for each calendar day the CAC Incinerator Scrubber is in operation.
d. As specified in §63.988(c)(1), the temperature monitoring device shall be installed in the fire box or in the ductwork immediately downstream of the fire box in a position before any substantial heat exchange occurs.

3. The CAC Incinerator shall only use natural gas as a fuel source.
   a. The owner or operator shall record the amount and type of fuel combusted in the CAC Incinerator on a monthly basis. Documentation may be in the form of fuel bills or meter readings, or other records that adequately document fuel usage.

**Reactor Absorber (CE-9D-30A)**

1. The Reactor (EU-9-TK-25) shall not vent through EP-38 without the Reactor Absorber (CE-9D-30A) operating within the parameters established in the Operating Limits and Recordkeeping Requirements section of this permit.
   a. The owner or operator shall maintain a record of the date and duration of each instance where the Reactor (EU-9-TK-25) is vented without the Reactor Absorber (CE-9D-30A) operating within the parameters established the Operating Limits and Recordkeeping Requirements section of this emission point.

2. When exhaust gases from the Reactor (EU-9-TK-25) are vented to EP 38, the minimum daily average liquid flow rate, in gallons per minute, to the Reactor Absorber (CE-9D-30A) shall not be less than the average liquid flow rate used during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF); or less than the liquid flow rate determined based on a design evaluation as allowed by §63.2450(h).
   a. The owner or operator shall maintain a record of the liquid flow rate to the Reactor Absorber (CE-9D-30A). In accordance with the monitoring, recordkeeping, and reporting requirements of the MON (40 CFR 63 Subpart FFFF), the liquid flow rate shall be recorded at intervals of 15 minutes or less while the absorber is controlling emissions from the Reactor (EU-9-TK-25).
   b. As specified in the MON (40 CFR 63, Subpart FFFF), the owner or operator shall calculate and record the daily average liquid flow rate for each calendar day the Reactor is in operation.
   c. The owner or operator shall record the average liquid flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

**CAC Stripper Absorber (CE-9D-30)**

1. The CAC Stripper (EU-01-0201) shall not vent through EP-38 without the CAC Stripper Absorber (CE-9D-30) operating within the parameters established under Operating Conditions and Requirements of this emission point.
   a. The owner or operator shall maintain a record of the date and duration of each instance where CAC Stripper (EU-01-0201) is vented without the CAC Stripper Absorber (CE-9D-30) operating within the parameters established under Operating Conditions and Requirements of this emission point.

2. When exhaust gases from the CAC Stripper (EU-01-0201) are vented to EP 38, the minimum daily average liquid flow rate, in gallons per minute, to the CAC Stripper Absorber (CE-9D-30) shall not be less than the average liquid flow rate used during stack
testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF); or less than the liquid flow rate determined based on a design evaluation as allowed by §63.2450(h).

a. The owner or operator shall maintain a record of the liquid flow rate to the CAC Stripper Absorber (CE-9D-30). In accordance with the monitoring, recordkeeping, and reporting requirements of the MON (40 CFR 63 Subpart FFFF), the liquid flow rate shall be recorded at intervals of 15 minutes or less while the absorber is controlling emissions from the CAC Stripper (EU-01-0201).

b. As specified in the MON (40 CFR 63, Subpart FFFF), the owner or operator shall calculate and record the daily average liquid flow rate for each calendar day the CAC Stripper Absorber is in operation.

c. The owner or operator shall record the average liquid flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

Caustic Scrubber (CE-9-0903)

1. The emission units, MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201), shall not vent through EP-38 without the Caustic Scrubber (CE-9-0903) operating within the parameters established the Operating Limits and Recordkeeping Requirements section of this emission point.

   a. The owner or operator shall maintain a record of the date and duration of each instance where the emission units are vented without the Caustic Scrubber (CE-9-0903) operating within the parameters established in the Operating Limits and Recordkeeping Requirements section of this permit.

2. When exhaust gases from the emission units, MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201), are vented to EP 38, the minimum daily average liquid flow rate, in gallons per minute, to the Caustic Scrubber shall not be less than the average liquid flow rate used during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) or less than the liquid flow rate determined based on a design evaluation as allowed by §63.2450(h).

   a. The owner or operator shall maintain a record of the liquid flow rate to the Caustic Scrubber (CE-9-0903). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF), the liquid flow rate shall be recorded at intervals of 15 minutes or less while the caustic scrubber is controlling emissions from the MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201).

   b. As specified in the MON (40 CFR 63, Subpart FFFF), the owner or operator shall calculate and record the daily average liquid flow rate for each calendar day the Caustic Scrubber is in operation.

   c. The owner or operator shall record the average liquid flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

3. When exhaust gases from the emission units, MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201), are vented to EP 38, the minimum daily average fresh water flow rate, in gallons per minute, to the Caustic Scrubber shall not be less than the average fresh water flow rate used during stack testing,
which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) or less than the liquid flow rate determined based on a design evaluation as allowed by §63.2450(h).

a. The owner or operator shall maintain a record of the fresh water flow rate to the Caustic Scrubber (CE-9-0903). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF), the fresh water flow rate shall be recorded at intervals of 15 minutes or less while the Caustic Scrubber (CE-9-0903) is controlling emissions from the MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201).

b. As specified in the MON (40 CFR 63, Subpart FFFF), the owner or operator shall calculate and record the daily average fresh water flow rate for each calendar day the Caustic Scrubber is in operation.

c. The owner or operator shall record the average fresh water flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

4. When exhaust gases from the emission units, MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201), are vented to EP 38, the minimum daily average pH, in standard pH units, for the effluent from the Caustic Scrubber shall not be less than the average effluent pH observed during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF) or less than the liquid flow rate determined based on a design evaluation as allowed by §63.2450(h).

a. The owner or operator shall maintain a record of the effluent pH from the Caustic Scrubber (CE-09-0903). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF), the effluent pH shall be recorded at intervals of 15 minutes or less while the Caustic Scrubber is controlling emissions from the MON 1400 Process Off-gas (EU-9-2925-01-0903-M14), Reactor (EU-9-TK-25), or CAC Stripper (EU-01-0201).

b. As specified in the MON (40 CFR 63, Subpart FFFF), the owner or operator shall calculate and record the daily average pH of the effluent for each calendar day the Caustic Scrubber is in operation.

c. The owner or operator shall record the average pH of the effluent used during the stack test that demonstrated compliance with the permitted emission limits.

**General Conditions**

1. The A-Unit Process Off-gas shall only use the following alcohols in any production process: ethanol, denatured ethanol, butanol, and methanol.

a. The owner or operator shall record the amount and type of alcohol used in the A-Unit Process Off-gas on a monthly basis.

2. In accordance with 40 CFR §63.2450(e) and as indicated in 40 CFR §63.982(c), the owner or operator shall comply with the applicable recordkeeping requirements in 40 CFR §63.998 and with the reporting requirements in 40 CFR §63.999 for control devices used in closed vent systems.

3. The owner or operator shall comply with the recordkeeping and reporting requirements as outlined in 40 CFR §63.1367 and §63.1368, respectively.
4. The owner or operator shall comply with the notification, reporting, and recordkeeping requirements as outlined in 40 CFR §63.2515, §63.2520, and §63.2525, respectively.

5. The owner or operator shall maintain a record of all maintenance and inspection activities performed on the emission units and control equipment. This record shall include:
   a. The date and time any inspection and/or maintenance was performed on the emission units and control equipment;
   b. Any issues identified during the inspection;
   c. Any issues addressed during the maintenance activities; and
   d. Identification of the staff member performing the maintenance or inspection.
   e. A permit modification is not required for routine replacement, addition, or removal of equipment components (i.e., valves, flanges, etc.), hoses, and/or piping made to the Chlorine Unloading Piping associated with EU-11-S-1-2.

Authority for Requirement: DNR Construction Permit 73-A-111-S9
567 IAC 23.1(4)"cf"
40 CFR 63 Subpart FFFF
567 IAC 23.1(4)"bm"
40 CFR 63 Subpart MMM

*EU-9-2925-01-0903-M14 (MON 1400 Process Off-gas), EU-9-TK-25 (Reactor), and EU-01-0201 (CAC Stripper) are subject to NESHAP Subpart MMM (National Emission Standards for Hazardous Air Pollutants for Pesticide Active Ingredient Production; 40 CFR §63. 1360 – §63.1369). However, the facility has chosen to comply with 40 CFR Part 63, Subpart FFFF for the PAI process unit group (PUG), instead, as allowed in 40 CFR §63.1360(h).

**Emission Point Characteristics**
*The emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 76
Stack Opening, (inches, dia.): 36
Exhaust Flow Rate (scfm): 2,450
Exhaust Temperature (°F): 175
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 73-A-111-S9

The temperature and flow rate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flow rate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

The owner/operator of this equipment shall comply with the monitoring requirements listed below.

- **Agency Approved Operation & Maintenance Plan Required?**  
  Yes ☐ No ☒

- **Facility Maintained Operation & Maintenance Plan Required?**  
  Yes ☐ No ☒

- **Compliance Assurance Monitoring (CAM) Plan Required?**  
  Yes ☒ No ☐

*The NESHAP requirements for this emission point are CAM equivalent. No CAM plan needed at this time.

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 40 % (1)
Authority for Requirement: DNR Construction Permit 88-A-001-S4 567 IAC 23.3(2)"d"

(1) An exceedance of the indicator opacity of 10% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: PM$_{2.5}$
Emission Limit: 0.52 lb/hr
Authority for Requirement: DNR Construction Permit 88-A-001-S4

Pollutant: PM$_{10}$
Emission Limit: 0.52 lb/hr
Authority for Requirement: DNR Construction Permit 88-A-001-S4

Pollutant: Particulate Matter
Emission Limit: 0.52 lb/hr, 0.1 gr/scf
Authority for Requirement: DNR Construction Permit 88-A-001-S4 567 IAC 23.3(2)"a"

Pollutant: Sulfur Dioxide (SO$_2$)
Emission Limit: 0.02 lb/hr, 500 ppm$_v$
Authority for Requirement: DNR Construction Permit 88-A-001-S4 567 IAC 23.3(3)"e"
Operational Limits and Recordkeeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. The owner or operator is limited to firing CAC Process Flare Burner (EU11-119-1) on natural gas fuel only.
   a. The owner or operator shall retain documentation onsite that only natural gas fuel is fired CAC Process Flare Burner (EU11-119-1).

2. The owner or operator shall develop an operating and maintenance plan for the Flare and pilot flame monitor, including a preventative maintenance schedule that is based on manufacturer’s instructions for routine and long-term maintenance modified for site-specific considerations, as necessary.
   a. The owner or operator shall retain a record of all inspections and maintenance of the control equipment and associated monitoring devices.
   b. The owner or operator shall document the results of all inspections and maintenance, and any action resulting from the inspection and maintenance of the flare (CE11-119) and the associated monitoring device(s).

Authority for Requirement: DNR Construction Permit 88-A-001-S4

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height, (ft, from the ground): 160
Stack Opening, (inches, dia.): 20
Exhaust Flow Rate (scfm): 3,076
Exhaust Temperature (°F): 2,700
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 88-A-001-S4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Agency Approved Operation & Maintenance Plan Required?  Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required?  Yes ☐ No ☒

Compliance Assurance Monitoring (CAM) Plan Required?  Yes ☐ No ☒

Authority for Requirement:  567 IAC 22.108(3)
Emission Point ID Number: EP 243

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Volatile Organic Compounds (VOC's)
Emission Limit(s): 6.0 tons/yr
Authority for Requirement: DNR Construction Permit 87-A-102-S3

Pollutant: HCl & Cl₂
Emission Limit(s): For those streams under the MON MACT: HCl/Cl₂ by ≥ 99%; OR to an outlet concentration ≤ 20 ppm; OR reduce emissions rate to ≤ 0.45 kg/hr
Authority for Requirement: DNR Construction Permit 87-A-102-S3
567 IAC 23.1(4)“cf”
40 CFR 63 Subpart FFFF

Operational Limits and Recordkeeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.
Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. CAC process off-gas (POG) may be vented to the CAC process scrubber for a maximum of 390 hours in any rolling 12-month period.
   a. The permittee shall monthly record the number of hours that the CAC process off-gas (POG) was vented to the scrubber; and,
   b. The permittee shall monthly record the rolling, 12-month total of the number of hours that the CAC process off-gas (POG) was vented to the scrubber.
2. When exhaust gases from the emission units, CAC Process Vents (EU-11-S-1-1), CAC Process Off-Gas (EU-11-S-1-2), Chlorinated Waste Tank (EU-11-27514), or the CAC Truck Loading (EU-11-BL), are vented to EP 243, the minimum daily average liquid flow rate, in gallons per minute, to the CAC Process Scrubber shall not be less than the average liquid flow rate used during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF).
   a. The owner or operator shall maintain a record of the liquid flow rate to the CAC Process Scrubber (CE-11-S-1). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF), the water usage shall be recorded at intervals of 15 minutes or less while the incinerator is controlling emissions from the CAC Process Vents (EU-11-S-1-1), CAC Process Off-Gas (EU-11-S-1-2), Chlorinated Waste Tank (EU-11-27514), or the CAC Truck Loading (EU-11-BL).
   b. The owner or operator shall record the average liquid flow rate used during the stack test that demonstrated compliance with the permitted emission limits.

3. When exhaust gases from the emission units, CAC Process Vents (EU-11-S-1-1), CAC Process Off-Gas (EU-11-S-1-2), Chlorinated Waste Tank (EU-11-27514), or the CAC Truck Loading (EU-11-BL), are vented to EP 243, the minimum daily average pH, in standard pH units, for the effluent from the CAC Process Scrubber shall not be less than the average effluent pH observed during stack testing, which demonstrated compliance with the emissions limits as required under the MON (40 CFR 63 Subpart FFFF).
   a. The owner or operator shall maintain a record of the effluent pH from the CAC Process Scrubber (CE-11-S-1). In accordance with the monitoring, recordkeeping, and reporting revisions of the MON (40 CFR 63 Subpart FFFF), the effluent pH shall be recorded at intervals of 15 minutes or less while the incinerator is controlling emissions from the CAC Process Vents (EU-11-S-1-1), CAC Process Off-Gas (EU-11-S-1-2), Chlorinated Waste Tank (EU-11-27514), or the CAC Truck Loading (EU-11-BL).
   b. The owner or operator shall record the average pH of the effluent used during the stack test that demonstrated compliance with the permitted emission limits.

4. The material loaded into trucks shall be limited to solvent column bottoms (SCB) generated in the CAC process.
   a. The maximum amount of SCB that can be loaded into trucks is 6,240,000 pounds per year. Since this represents the maximum throughput for truck loading, no recordkeeping on the amount of material loaded is required by this permit.
   b. The permittee shall maintain a record whenever material other than CAC solvent column bottoms is loaded into trucks.

5. The owner or operator shall meet all applicable requirements of National Emission Standards for Hazardous Air Pollutants; Miscellaneous Organic Chemical Manufacturing-Subpart FFFF.
   a. The owner or operator shall meet all of the applicable notification, reporting, and recordkeeping requirements specified in 40 CFR Part 63 Subpart FFFF, §63.2515, §63.2520, and §63.2525.

6. The owner or operator shall meet all applicable requirements for equipment leaks as specified in 40 CFR Part 63 Subpart FFFF, §63.2480, Table 6, and in in the referenced subparts F, H, or UU.
   a. The permittee shall document the subpart they are complying with, and meet all of the applicable requirements as specified in in the referenced subpart, including the record
keeping and reporting requirements. At the time of permit issuance, the permittee is complying with 40 CFR Part 63 Subpart UU, National Emission Standards for Equipment Leaks—Control Level 2 Standards, §63.1019 - §63.1039. The facility is allowed to change which subpart they are complying with; however, the permittee shall notify the Iowa DNR – Air Quality Bureau and DNR Field Office 6 in a compliance report if the subpart they are complying with has changed.

7. The owner or operator shall keep a record of all maintenance and inspection activities performed on the emission units and control equipment. This record shall include:
   a. The date and time any inspection and/or maintenance was performed on the emission units and control equipment;
   b. Any issues identified during the inspection;
   c. Any issues addressed during the maintenance activities; and
   d. Identification of the staff member performing the maintenance or inspection.
   e. A permit modification is not required for routine replacement, addition, or removal of equipment components (i.e., valves, flanges, etc.), hoses, pumps, and/or piping made to the CAC Process Vents.

Authority for Requirement: DNR Construction Permit 87-A-102-S3
567 IAC 23.1(4)"cf"
40 CFR 63 Subpart FFFF

**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 106
Stack Opening, (inches, dia.): 16
Exhaust Flow Rate (scfm): 2,900
Exhaust Temperature (°F): 70
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 87-A-102-S3

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

The emissions from this emission point shall not exceed the levels specified below.

There are no applicable emission limits for this emission point at this time.

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Reporting & Record keeping:**

Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. Per 567 IAC 33.3(18)"f"(4), the owner or operator shall:
   a. Monitor the emission of any regulated NSR pollutant that could increase as a result of the project that is emitted by any emissions unit.
   b. Calculate the annual emissions, in tons per year on a calendar-year basis, for a period of five (5) [NOTE: ten (10) if there is an increase in capacity] years following resumption of regular operations and maintain a record of regular operations after the change.

2. Per 567 IAC 33.3(18)"f"(5), the owner or operator shall retain a written record containing the information required in Condition 1 above for a period of ten (10) years after the project (Project Number 17-408) is completed.

3. Per 567 IAC 33.3(18)"g", the owner or operator shall make the information required to be documented and maintained pursuant to 567 IAC 33.3(18)"f" available for review upon request for inspection by the Department or the general public pursuant to the requirements for Title V operating permits contained in 567 IAC 22.107(6).

4. The owner or operator shall maintain copies of Safety Data Sheet (MSDS) for all chemicals stored in the tank.

**Authority for Requirement:** DNR Construction Permit 97-A-1012-S1
**Emission Point Characteristics**
*The emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 28  
Stack Opening, (inches, dia.): 4  
Exhaust Flow Rate (scfm): Breathing Losses  
Exhaust Temperature (°F): 70  
Discharge Style: Vertical, unobstructed  
Authority for Requirement: DNR Construction Permit 97-A-1012-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Operational Limits and Recordkeeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. The total dissolved solids (TDS) concentration in the cooling water shall not exceed a daily average of 1,870 parts per million by weight (1,870 mg/L) which is equivalent to a conductivity of 2,200 mmhos. In the event that the continuous conductivity sampling is not available, the TDS concentration in the cooling water shall not exceed 1,870 parts per million by weight (1,870 mg/L) per any single sampling event.

2. The facility shall utilize a continuous conductivity meter for direct measurement of TDS concentrations. For measurement purposes it shall be assumed that 85% of conductivity measured in mmhos is equivalent to TDS in parts per million (ppm).

3. In the event that the continuous conductivity meter is offline during any given month, the following procedures shall govern the occurrence of missing monitoring data during the given time period, the following steps for the substitution of missing data:
   a. If the monitor has operated for more than 95% of the time during a given monthly sampling period, the facility shall average the sample before and after the missing data point.
b. If the monitor has operated for less than 95% of the time during a given monthly sampling period, then a TDS sample shall be taken as a substitute for the monitoring data for that month.

4. The owner or operator shall develop an operating and maintenance plan for each Cooling Tower (EU 2-331, EU 2-101, EU 2-101B), including a preventative maintenance schedule that is based on manufacturer's instructions for routine and long-term maintenance modified for site-specific considerations, as necessary.

5. The owner or operator shall properly operate and maintain equipment to monitor the conductivity for each Cooling Tower (EU 2-331, EU 2-101, EU 2-101B). The monitoring device(s) and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

6. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of each Cooling Tower (EU 2-331, EU 2-101, EU 2-101B) and the associated monitoring device(s).

7. The owner or operator shall not use additives in cooling water associated with Cooling Towers (EU 2-331, EU 2-101, EU 2-101B) that contain chromium compounds.

8. The owner or operator shall retain the safety data sheets (SDS) of all additives used in cooling water associated with Cooling Towers (EU 2-331, EU 2-101, EU 2-101B).

Applicable Requirements

**Emission Limits (lb./hr, gr./scf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity
Emission Limit(s): 40 %\(^{(1)}\)
Authority for Requirement: DNR Construction Permit 97-A-182-S10 567 IAC 23.3(2)"d"

\(^{(1)}\)An exceedance of the indicator opacity of 10% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: PM\(_{10}\)
Emission Limit(s): 0.28 lb/hr
Authority for Requirement: DNR Construction Permit 97-A-182-S10

Pollutant: Particulate Matter
Emission Limit(s): 0.28 lb/hr, 0.1 gr/scf
Authority for Requirement: DNR Construction Permit 97-A-182-S10 567 IAC 23.3(2)"a"

Pollutant: Volatile Organic Compounds (VOC's)
Emission Limit(s): 6.30 lb/hr
Authority for Requirement: DNR Construction Permit 97-A-182-S10
Pollutant: Organic HAPs
Emission Limit(s): 90% reduction or 20 ppmv (2)
Authority for Requirement: DNR Construction Permit 97-A-182-S10
567 IAC 23.1(4)"bm"
40 CFR 63 Subpart MMM

(2) The uncontrolled organic HAP emissions from the sum of all process vents within this process shall be reduced by 90 percent or greater by weight or outlet concentration of the emission point is less than or equal to 20 ppmv.

**Operational Limits and Recordkeeping Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. The owner or operator shall maintain a maximum temperature of the scrubbing liquid (water) leaving the scrubber (CE-4-0229) that is equal to or less than the exhaust temperature measured during the most recent stack test that demonstrated compliance with the applicable emission limits.
   a. The owner or operator shall properly operate and maintain equipment to continuously monitor the scrubbing liquid temperature at the scrubber exit.
   b. The owner or operator shall collect and record the scrubbing liquid exit temperature, at a minimum of once every 15 minutes. In accordance with 40 CFR §63.1366(b)(7):
      i. Monitoring data are insufficient to constitute a valid hour of data if measured values are unavailable for any of the required 15-minute periods within the hour.
      ii. Operating days or blocks of four (4) hours or more shall have valid data for at least 75% of the operating hours.
      iii. Operating days or blocks with less than four (4) hours of operation shall not have more than one (1) hour of data that is invalid.
   c. The temperature monitoring device must be accurate to within ±2 percent of the temperature measured in degrees Celsius or ±2.5 °C, whichever is greater.
   d. The facility shall record the scrubbing liquid exit temperature as measured during the most recent stack test that demonstrated compliance.

2. The owner or operator shall maintain a maximum temperature of the exhaust gases leaving the scrubber (CE-4-0229) that is equal to or less than the exhaust temperature measured during the most recent stack test that demonstrated compliance with the applicable emission limits.
   a. The owner or operator shall properly operate and maintain equipment to continuously monitor the exhaust gas temperature at the scrubber exit.
   b. The owner or operator shall collect and record the exhaust gas temperature of the scrubber, at a minimum of once every 15 minutes. In accordance with 40 CFR §63.1366(b)(7):
      i. Monitoring data are insufficient to constitute a valid hour of data if measured values are unavailable for any of the required 15-minute periods within the hour.
ii. Operating days or blocks of four (4) hours or more shall have valid data for at least 75% of the operating hours.

c. Operating days or blocks with less than four (4) hours of operation shall not have more than one (1) hour of data that is invalid. The temperature monitoring device must be accurate to within ±2 percent of the temperature measured in degrees Celsius or ±2.5 °C, whichever is greater.

d. The facility shall record the exhaust temperature of the exhaust gases from the scrubber as measured during the most recent stack test that demonstrated compliance.

3. The owner or operator shall follow all recordkeeping requirements specified in 40 CFR §63.1367 including maintaining the following records:
   a. Control device operating parameters in accordance with §63.1366. As allowed in 40 CFR §63.1366(b)(4), is allowed to monitor the temperature drop across the scrubber and exhaust gas temperature as alternative monitored parameters to demonstrate continuous compliance with the emission limit.
   b. The operating hours per year for continuous processes.

4. The owner or operator shall comply with all applicable existing source requirements of 40 CFR §63.1360 through 40 CFR §63.1369 (NESHAP Subpart MMM).

5. The owner or operator shall comply with all applicable monitoring and recordkeeping requirements of 40 CFR 63 Subpart MMM after the existing source compliance date listed in 40 CFR §63.1364(a).

6. The owner or operator shall conduct an inspection of control equipment, at a minimum of once per year and correct/repair any issues discovered during the inspection. The owner or operator shall maintain a log of all inspections and maintenance activities performed on the control equipment. This log shall include, but is not necessarily limited to:
   a. The date and time any inspection and/or maintenance was performed on the control equipment;
   b. Any issues identified during the inspection and the date each issue was resolved;
   c. Any issues addressed during the maintenance activities and the date each issue was resolved; and,
   d. Identification of the staff person performing the maintenance or inspection.

Authority for Requirement: DNR Construction Permit 97-A-182-S10
567 IAC 23.1(4)"bm"
40 CFR 63 Subpart MMM
**Emission Point Characteristics**

*The emission point shall conform to the specifications listed below.*

Stack Height, (ft, from the ground): 111  
Stack Opening, (inches, dia.): 20  
Exhaust Flow Rate (scfm): 4,100  
Exhaust Temperature (°F): 80  
Discharge Style: Vertical unobstructed  
Authority for Requirement: DNR Construction Permit 97-A-182-S10

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

- **Agency Approved Operation & Maintenance Plan Required?** Yes [ ] No ☒
- **Facility Maintained Operation & Maintenance Plan Required?** Yes [ ] No ☒
- **Compliance Assurance Monitoring (CAM) Plan Required?** Yes [ ] No ☒

CE-4-0785: Packed Scrubber
Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40 %\(^{(1)}\)
Authority for Requirement: DNR Construction Permit 97-A-183-S15
567 IAC 23.3(2)"d"

\(^{(1)}\)An exceedance of the indicator opacity of 10% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: PM\(_{10}\)
Emission Limit(s): 0.35 lb/hr
Authority for Requirement: DNR Construction Permit 97-A-183-S15

Pollutant: Particulate Matter
Emission Limit(s): 0.35 lb/hr, 0.1 gr/scf
Authority for Requirement: DNR Construction Permit 97-A-183-S15
567 IAC 23.3(2)"a"

Pollutant: Volatile Organic Compounds (VOC's)
Emission Limit(s): 1.50 lb/hr
Authority for Requirement: DNR Construction Permit 97-A-183-S15

Pollutant: Organic HAPs
Emission Limit(s): 90% reduction or 20 ppmv\(^{(2)}\)
Authority for Requirement: DNR Construction Permit 97-A-183-S15
567 IAC 23.1(4)"bm"
40 CFR 63 Subpart MMM

\(^{(2)}\)The uncontrolled organic HAP emissions from the sum of all process vents within this process shall be reduced by 90 percent or greater by weight or outlet concentration of the emission point is less than or equal to 20 ppmv.
Operational Limits and Recordkeeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.
Records shall be kept on site for at least five years and shall be available for inspection by the Department.

A. The owner or operator shall maintain a maximum temperature of the scrubbing liquid (water) leaving the scrubber (CE-4-0785) that is equal to or less than the exhaust temperature measured during the most recent stack test that demonstrated compliance with the applicable emission limits.

1) The owner or operator shall properly operate and maintain equipment to continuously monitor the scrubbing liquid temperature at the scrubber exit.

2) The owner or operator shall collect and record the scrubbing liquid exit temperature, at a minimum of once every 15 minutes. In accordance with 40 CFR §63.1366(b)(7):
   a) Monitoring data are insufficient to constitute a valid hour of data if measured values are unavailable for any of the required 15-minute periods within the hour.
   b) Operating days or blocks of four (4) hours or more shall have valid data for at least 75% of the operating hours.
   c) Operating days or blocks with less than four (4) hours of operation shall not have more than one (1) hour of data that is invalid.

3) The temperature monitoring device must be accurate to within ±2 percent of the temperature measured in degrees Celsius or ±2.5 °C, whichever is greater.

4) The facility shall record the scrubbing liquid exit temperature as measured during the most recent stack test demonstrated compliance.

B. The owner or operator shall maintain a maximum temperature of the exhaust gases leaving the scrubber (CE-4-0785) that is equal to or less than the exhaust temperature measured during the most recent stack test that demonstrated compliance with the applicable emission limits.

1) The owner or operator shall properly operate and maintain equipment to continuously monitor the exhaust gas temperature at the scrubber exit.

2) The owner or operator shall collect and record the exhaust gas temperature of the scrubber, at a minimum of once every 15 minutes. In accordance with 40 CFR §63.1366(b)(7):
   a) Monitoring data are insufficient to constitute a valid hour of data if measured values are unavailable for any of the required 15-minute periods within the hour.
   b) Operating days or blocks of four (4) hours or more shall have valid data for at least 75% of the operating hours.
   c) Operating days or blocks with less than four (4) hours of operation shall not have more than one (1) hour of data that is invalid.
3) The temperature monitoring device must be accurate to within ±2 percent of the temperature measured in degrees Celsius or ±2.5 °C, whichever is greater.
4) The facility shall record the exhaust temperature of the exhaust gases from the scrubber as measured during the most recent stack test demonstrated compliance.

C. The owner or operator shall follow all recordkeeping requirements specified in 40 CFR §63.1367 including maintaining the following records:
   1) Control device operating parameters in accordance with §63.1366. As allowed in 40 CFR §63.1366(b)(4), is allowed to monitor the temperature drop across the scrubber and exhaust gas temperature as alternative monitored parameters to demonstrate continuous compliance with the emission limit.
   2) The operating hours per year for continuous processes.

D. The owner or operator shall comply with all applicable existing source requirements of 40 CFR §63.1360 through 40 CFR §63.1369 (NESHAP Subpart MMM).

E. The owner or operator shall comply with all applicable monitoring and recordkeeping requirements of 40 CFR 63 Subpart MMM after the existing source compliance date listed in 40 CFR §63.1364(a).

F. The owner or operator shall conduct an inspection of control equipment, at a minimum of once per year and correct/repair any issues discovered during the inspection. The owner or operator shall maintain a log of all inspections and maintenance activities performed on the control equipment. This log shall include, but is not necessarily limited to:
   e. The date and time any inspection and/or maintenance was performed on the control equipment;
   f. Any issues identified during the inspection and the date each issue was resolved;
   g. Any issues addressed during the maintenance activities and the date each issue was resolved; and,
   h. Identification of the staff person performing the maintenance or inspection.

**Operational Limits and Recordkeeping Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

*Records shall be kept on site for at least five years and shall be available for inspection by the Department.*

1. The total dissolved solids (TDS) concentration in the cooling water shall not exceed a daily average of 1,870 parts per million by weight (1,870 mg/L) which is equivalent to a conductivity of 2,200 mmhos. In the event that the continuous conductivity sampling is not available, the TDS concentration in the cooling water shall not exceed 1,870 parts per million by weight (1,870 mg/L) per any single sampling event.
2. The facility shall utilize a continuous conductivity meter for direct measurement of TDS concentrations. For measurement purposes it shall be assumed that 85% of conductivity measured in mmhos is equivalent to TDS in parts per million (ppm).
3. In the event that the continuous conductivity meter is offline during any given month, the following procedures shall govern the occurrence of missing monitoring data during the given time period, the following steps for the substitution of missing data:
   a. If the monitor has operated for more than 95% of the time during a given monthly sampling period, the facility shall average the sample before and after the missing data point.
   b. If the monitor has operated for less than 95% of the time during a given monthly sampling period, then a TDS sample shall be taken as a substitute for the monitoring data for that month.
4. The owner or operator shall develop an operating and maintenance plan for each Cooling Tower (EU 1-844, EU 1-845), including a preventative maintenance schedule that is based on manufacturer's instructions for routine and long-term maintenance modified for site-specific considerations, as necessary.

5. The owner or operator shall properly operate and maintain equipment to monitor the conductivity for each Cooling Tower (EU 1-844, EU 1-845). The monitoring device(s) and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

6. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of each Cooling Tower (EU 1-844, EU 1-845) and the associated monitoring device(s).

7. The owner or operator shall not use additives in cooling water associated with Cooling Towers (EU 1-844, EU 1-845) that contain chromium compounds.

8. The owner or operator shall retain the safety data sheets (SDS) of all additives used in cooling water associated with Cooling Towers (EU 1-844, EU 1-845).

**Emission Point Characteristics**

*Each emission point shall conform to the specifications listed below.*

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

The emissions from these emission points shall not exceed the levels specified below.

There are no applicable emission limits for these emission units at this time.

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

1. The permittee shall determine the group status for this emission unit as specified in 40 CFR §63.2485(c) and 40 CFR §63.2520(d)(2)(i).
2. The permittee shall meet all the applicable requirements of notification, reporting, and recordkeeping as specified in 40 CFR §63.2515, §63.2520 and §63.2525.
3. The primary product in the Multipurpose Production Line, including this wastewater management unit (EU-9-0302) was determined to be MON13900, a non-pesticide active ingredient. Per 40 CFR §63.2535(1)(2), the facility is required to re-determine the primary product at least once every 5 years. The primary product, the facility (70-01-008) shall comply with the Pesticide Active Ingredient (PAI) MACT (NESHAP MMM) requirements.

Emission Point Characteristics
The emission points shall conform to the specifications listed below.

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.

The data pertaining to the plan shall be maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.

Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40%
Authority for Requirement: DNR Construction Permit 97-A-204-S3
567 IAC 23.3(2)"d"

Pollutant: Particulate Matter
Emission Limit(s): 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 97-A-204-S3
567 IAC 23.3(2)"a"

Operational Limits and Recordkeeping Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. For each product produced in emission units (MON 13900 Autoclaves) associated with EP-18 the owner or operator shall identify and document each VOC and HAP containing material used or produced.
2. The owner or operator shall maintain a copy of the Safety Data Sheet (SDS) for each material used in the emission units associated with EP-18.

NESHAP Requirements:
1. The owner or operator shall meet all applicable requirements of National Emission Standards for Hazardous Air Pollutants; Miscellaneous Organic Chemical Manufacturing-Subpart FFFF], including those not specifically mentioned in this permit.

65

92-3670 Monsanto Company
EP
a. The owner or operator shall meet all of the applicable notification, reporting, and recordkeeping requirements specified in 40 CFR Part 63 Subpart FFFF, §63.2515, §63.2520, and §63.2525.

2. The owner or operator shall identify, determine, and document the type (continuous or batch) for all process vents associated with the MON13900 process, as defined in 40 CFR Part 63 Subpart FFFF, 63.2550.
   a. For continuous process vents, the owner or operator shall determine the group status as per 40 CFR Part 63 Subpart FFFF, 63.2455(b).
   b. For batch process vents, the owner or operator shall determine the group status as per 40 CFR Part 63 Subpart FFFF, 63.2460(b). The owner or operator shall determine and document the group status of the batch process vents by determining and summing the uncontrolled organic HAP emissions from each of the batch process vents within the process (MON13900) using the procedures specified in § 63.1257(d)(2)(i) and (ii), except as specified in paragraphs § 63.2460 (b)(1) through (7).
   c. The group status and type of process vent (continuous or batch) shall initially be documented as required in 63.2520(d), and any subsequent changes in group status shall be documented as specified in 63.2520(e)(10).

3. All batch process vents that are part of the miscellaneous organic chemical process unit for the MON13900 process shall operate as Group 2 Batch Process Vents, as specified in 40 CFR Part 63 Subpart FFFF, 63.2550.
   a. As specified in § 63.2525(e)(4), unless one of the conditions specified in paragraphs § 63.2525(e)(1) through (e)(3) is met, the owner or operator must keep records of the information specified in paragraphs (e)(4)(i) through (iv), as applicable:
      i. A record of the day each batch was completed and/or the operating hours per day for continuous operations with hydrogen halide and halogen emissions.
      ii. A record of whether each batch operated was considered a standard batch.
      iii. The estimated uncontrolled and controlled emissions for each batch that is considered to be a nonstandard batch.
      iv. Records of the daily 365-day rolling summations of emissions, or alternative records that correlate to the emissions (e.g., number of batches), calculated no less frequently than monthly.

4. As specified in § 63.2445(d), if a Group 2 emission point becomes a Group 1 emission point after the compliance date, the owner or operator must comply with the Group 1 requirements beginning on the date the switch occurs and provide notification as specified in either paragraph § 63.2460 (b)(6)(i) or (ii) and 63.2520(e)(10)(ii)(C). An initial compliance demonstration as specified in this subpart must be conducted within 150 days after the switch occurs. The facility shall obtain the proper permit modifications for this change as specified in 567 IAC 22.1.

567 IAC 23.1(4)"cf"
40 CFR 63 Subpart FFFF

^{(1)}The uncontrolled organic HAP emissions from the sum of all process vents within this process shall be reduced by 98 percent of greater by weight by venting emission from a sufficient number of the vents through one or more closed-vent systems to any combination of control devices per NESHAP Subpart FFFF – National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing (Table 2).

**Operational Limits and Recordkeeping Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below. Records shall be kept on site for at least five years and shall be available for inspection by the Department.

1. As per 40 CFR 63.252(d), the permittee shall maintain the following records:
   a. Records of whether each batch operated was considered a standard batch.
   b. The estimated uncontrolled emissions for each batch that is considered to be a nonstandard batch.
2. The permittee shall meet all the applicable requirements of notification, reporting, and recordkeeping as specified in 40 CFR § 63.2515, §63.2520 and §63.2525 (NESHAP Subpart FFFF)
3. The primary product in the Multipurpose Production Line, including this process vent (EP-138), was determined to be MON13900, a non-pesticide active ingredient. Per 40 CFR §63.2535(1)(2), the facility is required to re-determine the primary product at least once every 5 years. The primary product has remained MON13900 in subsequent re-determinations. If it is determined that MON1400 becomes the primary product, the facility (70-01-008) shall comply with the Pesticide Active Ingredient (PAI) MACT (NESHAP MMM) requirements.
Authority for Requirement: DNR Construction Permit 97-A-205-S2
567 IAC 23.1(4)"cf"
40 CFR 63 Subpart FFFF

**Emission Point Characteristics**
The emission point shall conform to the specifications listed below.

Stack Height, (ft, from the ground): 1
Stack Opening, (inches, dia.): 6
Exhaust Flow Rate (scfm): Working/ Breathing Loss (Displacement)
Exhaust Temperature (°F): Ambient
Discharge Style: Downward
Authority for Requirement: DNR Construction Permit 97-A-205-S2

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
**Emission Point ID Number: EP 151**

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

- **Pollutant:** Opacity
  - **Emission Limit:** 40%<sup>(1)</sup>
  - **Authority for Requirement:** DNR Construction Permit 78-A-179-S12
    - 567 IAC 23.3(2)"d"

<sup>(1)</sup> An exceedance of the indicator opacity of 25% will required the owner or operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the Department may require additional proof to demonstrate compliance (e.g., stack testing).

- **Pollutant:** PM<sub>2.5</sub>
  - **Emission Limit:** 0.042 lb/hr
  - **Authority for Requirement:** DNR Construction Permit 78-A-179-S12

- **Pollutant:** Particulate Matter
  - **Emission Limit:** 0.1 gr/dscf
  - **Authority for Requirement:** DNR Construction Permit 78-A-179-S12
    - 567 IAC 23.3(2)"a"

**Operating Requirements with Associated Monitoring and Recordkeeping**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below. All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.*

1. For each product produced in the emission units associated with Emission Point EP-151, the owner or operator shall identify and document each VOC and HAP containing material used or produced.
2. The owner or operator shall maintain a copy of the Safety Data Sheet (SDS) for each material used in the emission units associated with Emission Point EP-151.
NESHAP Requirements:

1. The owner or operator shall meet all applicable requirements of National Emission Standards for Hazardous Air Pollutants; Miscellaneous Organic Chemical Manufacturing-Subpart FFFF, including those not specifically mentioned in this permit.
   a. The owner or operator shall meet all of the applicable notification, reporting, and recordkeeping requirements as specified in 40 CFR Part 63 FFFF, §63.2515, §63.2520, and §63.2525.

2. The owner or operator shall identify, determine, and document the type (continuous or batch) for all process vents associated with the MON13900 process, as defined in 40 CFR Part 63 Subpart FFFF, 63.2550.
   a. For continuous process vents, the owner or operator shall determine the group status as per 40 CFR Part 63 Subpart FFFF, 63.2455(b).
   b. For batch process vents, the owner or operator shall determine the group status as per 40 CFR Part 63 Subpart FFFF, 63.2460(b). The owner or operator shall determine and document the group status of the batch process vents by determining and summing the uncontrolled organic HAP emissions from each of the batch process vents within the process (MON13900) using the procedures specified in § 63.1257(d)(2)(i) and (ii), except as specified in paragraphs § 63.2460 (b)(1) through (7).
   c. The group status and type of process vent (continuous or batch) shall initially be documented as required in 63.2520(d), and any subsequent changes in group status shall be documented as specified in 63.2520(e)(10).

3. All batch process vents that are part of the miscellaneous organic chemical process unit for the MON13900 process shall operate as Group 2 Batch Process Vents, as specified in 40 CFR Part 63 Subpart FFFF, 63.2550.
   a. As specified in § 63.2525(e)(4), unless one of the conditions specified in paragraphs § 63.2525(e)(1) through (e)(3) is met, the owner or operator must keep records of the information specified in paragraphs (e)(4)(i) through (iv), as applicable:
   b. A record of the day each batch was completed and/or the operating hours per day for continuous operations with hydrogen halide and halogen emissions.
   c. A record of whether each batch operated was considered a standard batch.
   d. The estimated uncontrolled and controlled emissions for each batch that is considered to be a nonstandard batch.
   e. Records of the daily 365-day rolling summations of emissions, or alternative records that correlate to the emissions (e.g., number of batches), calculated no less frequently than monthly.

4. As specified in § 63.2445(d), if a Group 2 emission point becomes a Group 1 emission point after the compliance date, the owner or operator must comply with the Group 1 requirements beginning on the date the switch occurs and provide notification as specified in either paragraph § 63.2460 (b)(6)(i) or (ii) and 63.2520(e)(10)(ii)(C). An initial compliance demonstration as specified in this subpart must be conducted within 150 days after the switch occurs. The facility shall obtain the proper permit modifications for this change as specified in 567 IAC 22.1.

5. The owner or operator is not required to operate the Packed Bed Scrubber (CE-9-0903) as long as the owner or operator is able to demonstrate compliance, using standards set forth in 40 CFR 63.2460(b), with the emission limits listed in Condition 1 of this permit and the requirements of NESHAP FFFF without the Packed Bed Scrubber in operation.
Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height, (ft, from the ground): 57
Stack Opening, (inches, dia.): 10
Exhaust Flow Rate (scfm): 1,410
Exhaust Temperature (°F): 95
Discharge Style: Vertical Unobstructed

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

The emissions from this emission point shall not exceed the levels specified below.

There are no applicable emission limits for this emission unit at this time.

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

1. The day tank shall be operated and maintained according to manufacturer specifications and maintenance schedule.
   a. The owner or operator shall keep a record of all inspections and maintenance and any actions resulting from the inspections and maintenance for the day tank.
2. The permittee shall employ good housekeeping practices. Cleanup of liquid spills shall be initiated promptly upon discovery.
3. The permittee shall maintain records for all materials stored in this emission unit including the material content and the HAPs content of all materials.
4. The permittee shall maintain a copy of the Safety Data Sheets (SDSs) for all materials stored in this emission unit.

**Emission Point Characteristics**

The emission point shall conform to the specifications listed below:

Stack Height, (ft, from the ground): 30
Stack Opening, (inches, dia.): 4
Exhaust Flow Rate (scfm): 185
Exhaust Temperature (°F): 140
Discharge Style: Downward
Authority for Requirement: DNR Construction Permit 13-A-457-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall
submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

*The emissions from this emission point shall not exceed the levels specified below.*

There are no applicable emission limits for this emission unit at this time.

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

Operating Limits:

1. The storage vessel shall not store a liquid with a maximum true vapor pressure greater than 0.010 mmHg.
2. The storage tank shall be insulated.

Authority for Requirement:  DNR Construction Permit 95-A-507

Reporting & Record keeping:

*Records shall be kept on site for at least five years and shall be available for inspection by the Department.*

1. The VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
2. The dimension of the storage vessel and an analysis showing the capacity of the storage vessel shall be kept for the life of the emission source.

Authority for Requirement:  DNR Construction Permit 95-A-507

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Volatile Organic Compounds (VOC)

Emission Limit(s): Emissions are limited by the maximum capacity of the emission unit and the maximum allowed VOC/HAP concentration of the exhaust stream.

Authority for Requirement: DNR Construction Permit 19-A-562

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

1. The owner or operator shall maintain a copy of the Safety Data Sheet (SDS) for each material used in the emission unit (Filter Feed Tank).
2. The owner or operator shall record which of the following methods were used to determine the HAP concentration in the exhaust stream to EP 422.
   a. Process knowledge that no HAPs are present in the emission stream;
   b. Using an engineering assessment as discussed in §63.1365(c)(2)(ii);
   c. Test data collected using Method 18 or 40 CFR Part 60, Appendix A; or,
   d. Test data collected using any other test method that has been validated according to the procedures in Method 301 of 40 CFR Part 63, Appendix A.
**Emission Point Characteristics**  
*The emission point shall conform to the specifications listed below.*

- **Stack Height, (ft, from the ground):** 57.2
- **Stack Opening, (inches, dia.):** 4
- **Exhaust Flow Rate (scfm):** 180
- **Exhaust Temperature (°F):** 170

Authority for Requirement: DNR Construction Permit 19-A-562

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Agency Approved Operation & Maintenance Plan Required?**  Yes ☐ No ☒

**Facility Maintained Operation & Maintenance Plan Required?**  Yes ☐ No ☒

**Compliance Assurance Monitoring (CAM) Plan Required?**  Yes ☐ No ☒

Facility operation and maintenance plans must be sufficient to yield reliable data from the relevant time period that are representative of the source’s compliance with the applicable requirements.

The data pertaining to the plan shall be maintained on site for at least 5 years. The plan and associated recordkeeping provides documentation of this facility’s implementation of its obligation to operate according to good air pollution control practice.

Good air pollution control practice is achieved by adoption of quality control standards in the operation and maintenance procedures for air pollution control that are comparable to industry quality control standards for the production processes associated with this emission point.

Authority for Requirement: 567 IAC 22.108(3)
IV. General Conditions

This permit is issued under the authority of the Iowa Code subsection 455B.133(8) and in accordance with 567 Iowa Administrative Code chapter 22.

G1. Duty to Comply

1. The permittee must comply with all conditions of the Title V permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action; for a permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. 567 IAC 22.108(9)"a"

2. Any compliance schedule shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based. 567 IAC 22.105 (2)"h"(3)

3. Where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be enforceable by the administrator and are incorporated into this permit. 567 IAC 22.108 (1)"b"

4. Unless specified as either "state enforceable only" or "local program enforceable only", all terms and conditions in the permit, including provisions to limit a source's potential to emit, are enforceable by the administrator and citizens under the Act. 567 IAC 22.108 (14)

5. It shall not be a defense for a permittee, in an enforcement action, that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit. 567 IAC 22.108 (9)"b"

6. For applicable requirements with which the permittee is in compliance, the permittee shall continue to comply with such requirements. For applicable requirements that will become effective during the permit term, the permittee shall meet such requirements on a timely basis. 567 IAC 22.108(15)"c"

G2. Permit Expiration

1. Except as provided in rule 567—22.104(455B), permit expiration terminates a source’s right to operate unless a timely and complete application for renewal has been submitted in accordance with rule 567—22.105(455B). 567 IAC 22.116(2)

2. To be considered timely, the owner, operator, or designated representative (where applicable) of each source required to obtain a Title V permit shall submit on forms or electronic format specified by the Department to the Air Quality Bureau, Iowa Department of Natural Resources, Air Quality Bureau, Wallace State Office Building, 502 E 9th St., Des Moines, IA 50319-0034, two copies (three if your facility is located in Linn or Polk county) of a complete permit application, at least 6 months but not more than 18 months prior to the date of permit expiration. An additional copy must also be sent to U.S. EPA Region VII, Attention: Chief of Air Permitting & Standards Branch, 11201 Renner Blvd., Lenexa, KS 66219. Additional copies to local programs or EPA are not required for application materials submitted through the electronic format specified by the Department. The application must include all emission points, emission units, air pollution control equipment, and monitoring devices at the facility. All emissions generating activities, including fugitive emissions, must be included. The definition of a complete application is as indicated in 567 IAC 22.105(2). 567 IAC 22.105

G3. Certification Requirement for Title V Related Documents

Any application, report, compliance certification or other document submitted pursuant to this permit shall contain certification by a responsible official of truth, accuracy, and completeness. All certifications shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. 567 IAC 22.107 (4)
G4. Annual Compliance Certification
By March 31 of each year, the permittee shall submit compliance certifications for the previous calendar year. The certifications shall include descriptions of means to monitor the compliance status of all emissions sources including emissions limitations, standards, and work practices in accordance with applicable requirements. The certification for a source shall include the identification of each term or condition of the permit that is the basis of the certification; the compliance status; whether compliance was continuous or intermittent; the method(s) used for determining the compliance status of the source, currently and over the reporting period consistent with all applicable department rules. For sources determined not to be in compliance at the time of compliance certification, a compliance schedule shall be submitted which provides for periodic progress reports, dates for achieving activities, milestones, and an explanation of why any dates were missed and preventive or corrective measures. The compliance certification shall be submitted to the administrator, director, and the appropriate DNR Field office. 567 IAC 22.108 (15)"e"

G5. Semi-Annual Monitoring Report
By March 31 and September 30 of each year, the permittee shall submit a report of any monitoring required under this permit for the 6 month periods of July 1 to December 31 and January 1 to June 30, respectively. All instances of deviations from permit requirements must be clearly identified in these reports, and the report must be signed by a responsible official, consistent with 567 IAC 22.107(4). The semi-annual monitoring report shall be submitted to the director and the appropriate DNR Field office. 567 IAC 22.108 (5)

G6. Annual Fee
1. The permittee is required under subrule 567 IAC 22.106 to pay an annual fee based on the total tons of actual emissions of each regulated air pollutant. Beginning July 1, 1996, Title V operating permit fees will be paid on July 1 of each year. The fee shall be based on emissions for the previous calendar year.
2. The fee amount shall be calculated based on the first 4,000 tons of each regulated air pollutant emitted each year. The fee to be charged per ton of pollutant will be available from the department by June 1 of each year. The Responsible Official will be advised of any change in the annual fee per ton of pollutant.
3. The emissions inventory shall be submitted annually by March 31 with forms specified by the department documenting actual emissions for the previous calendar year.
4. The fee shall be submitted annually by July 1 with forms specified by the department.
5. If there are any changes to the emission calculation form, the department shall make revised forms available to the public by January 1. If revised forms are not available by January 1, forms from the previous year may be used and the year of emissions documented changed. The department shall calculate the total statewide Title V emissions for the prior calendar year and make this information available to the public no later than April 30 of each year.
6. Phase I acid rain affected units under section 404 of the Act shall not be required to pay a fee for emissions which occur during the years 1993 through 1999 inclusive.
7. The fee for a portable emissions unit or stationary source which operates both in Iowa and out of state shall be calculated only for emissions from the source while operating in Iowa.
8. Failure to pay the appropriate Title V fee represents cause for revocation of the Title V permit as indicated in 567 IAC 22.115(1)"d".
G7. Inspection of Premises, Records, Equipment, Methods and Discharges
Upon presentation of proper credentials and any other documents as may be required by law, the permittee shall allow the director or the director's authorized representative to:
1. Enter upon the permittee's premises where a Title V source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
3. Inspect, at reasonable times, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
4. Sample or monitor, at reasonable times, substances or parameters for the purpose of ensuring compliance with the permit or other applicable requirements. 567 IAC 22.108 (15)“b”

G8. Duty to Provide Information
The permittee shall furnish to the director, within a reasonable time, any information that the director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee also shall furnish to the director copies of records required to be kept by the permit, or for information claimed to be confidential, the permittee shall furnish such records directly to the administrator of EPA along with a claim of confidentiality. 567 IAC 22.108 (9)“e”

G9. General Maintenance and Repair Duties
The owner or operator of any air emission source or control equipment shall:
1. Maintain and operate the equipment or control equipment at all times in a manner consistent with good practice for minimizing emissions.
2. Remedy any cause of excess emissions in an expeditious manner.
3. Minimize the amount and duration of any excess emission to the maximum extent possible during periods of such emissions. These measures may include but not be limited to the use of clean fuels, production cutbacks, or the use of alternate process units or, in the case of utilities, purchase of electrical power until repairs are completed.
4. Schedule, at a minimum, routine maintenance of equipment or control equipment during periods of process shutdowns to the maximum extent possible. 567 IAC 24.2(1)

G10. Recordkeeping Requirements for Compliance Monitoring
1. In addition to any source specific recordkeeping requirements contained in this permit, the permittee shall maintain the following compliance monitoring records, where applicable:
   a. The date, place and time of sampling or measurements
   b. The date the analyses were performed.
   c. The company or entity that performed the analyses.
   d. The analytical techniques or methods used.
   e. The results of such analyses; and
   f. The operating conditions as existing at the time of sampling or measurement.
   g. The records of quality assurance for continuous compliance monitoring systems (including but not limited to quality control activities, audits and calibration drifts.)
2. The permittee shall retain records of all required compliance monitoring data and support information for a period of at least 5 years from the date of compliance monitoring sample, measurement report or application. Support information includes all calibration and maintenance records and all original strip chart recordings for continuous compliance monitoring, and copies of all reports required by the permit.
3. For any source which in its application identified reasonably anticipated alternative operating
scenarios, the permittee shall:
   a. Comply with all terms and conditions of this permit specific to each alternative scenario.
   b. Maintain a log at the permitted facility of the scenario under which it is operating.
   c. Consider the permit shield, if provided in this permit, to extend to all terms and conditions
      under each operating scenario. 567 IAC 22.108(4), 567 IAC 22.108(12)

G11. Evidence used in establishing that a violation has or is occurring.
Notwithstanding any other provisions of these rules, any credible evidence may be used for the
purpose of establishing whether a person has violated or is in violation of any provisions herein.
1. Information from the use of the following methods is presumptively credible evidence of whether
a violation has occurred at a source:
   a. A monitoring method approved for the source and incorporated in an operating permit
      pursuant to 567 Chapter 22;
   b. Compliance test methods specified in 567 Chapter 25; or
   c. Testing or monitoring methods approved for the source in a construction permit issued
      pursuant to 567 Chapter 22.
2. The following testing, monitoring or information gathering methods are presumptively credible
testing, monitoring, or information gathering methods:
   a. Any monitoring or testing methods provided in these rules; or
   b. Other testing, monitoring, or information gathering methods that produce information
      comparable to that produced by any method in subrule 21.5(1) or this subrule. 567 IAC
      21.5(1)-567 IAC 21.5(2)

Certification
If the permittee is required to develop and register a risk management plan pursuant to section
112(r) of the Act, the permittee shall notify the department of this requirement. The plan shall be
filed with all appropriate authorities by the deadline specified by EPA. A certification that this risk
management plan is being properly implemented shall be included in the annual compliance
certification of this permit. 567 IAC 22.108(6)

G13. Hazardous Release
The permittee must report any situation involving the actual, imminent, or probable release of a
hazardous substance into the atmosphere which, because of the quantity, strength and toxicity of the
substance, creates an immediate or potential danger to the public health, safety or to the
environment. A verbal report shall be made to the department at (515) 725-8694 and to the local
police department or the office of the sheriff of the affected county as soon as possible but not later
than six hours after the discovery or onset of the condition. This verbal report must be followed up
with a written report as indicated in 567 IAC 131.2(2). 567 IAC Chapter 131-State Only

G14. Excess Emissions and Excess Emissions Reporting Requirements
1. Excess Emissions. Excess emission during a period of startup, shutdown, or cleaning of control
equipment is not a violation of the emission standard if the startup, shutdown or cleaning is
accomplished expeditiously and in a manner consistent with good practice for minimizing
emissions. Cleaning of control equipment which does not require the shutdown of the process
equipment shall be limited to one six-minute period per one-hour period. An incident of excess
emission (other than an incident during startup, shutdown or cleaning of control equipment) is a
violation. If the owner or operator of a source maintains that the incident of excess emission was
due to a malfunction, the owner or operator must show that the conditions which caused the incident
of excess emissions were not preventable by reasonable maintenance and control measures. Determination of any subsequent enforcement action will be made following review of this report. If excess emissions are occurring, either the control equipment causing the excess emission shall be repaired in an expeditious manner or the process generating the emissions shall be shutdown within a reasonable period of time. An expeditious manner is the time necessary to determine the cause of the excess emissions and to correct it within a reasonable period of time. A reasonable period of time is eight hours plus the period of time required to shut down the process without damaging the process equipment or control equipment. A variance from this subrule may be available as provided for in Iowa Code section 455B.143. In the case of an electric utility, a reasonable period of time is eight hours plus the period of time until comparable generating capacity is available to meet consumer demand with the affected unit out of service, unless, the director shall, upon investigation, reasonably determine that continued operation constitutes an unjustifiable environmental hazard and issue an order that such operation is not in the public interest and require a process shutdown to commence immediately.

2. Excess Emissions Reporting

   a. Initial Reporting of Excess Emissions. An incident of excess emission (other than an incident of excess emission during a period of startup, shutdown, or cleaning) shall be reported to the appropriate field office of the department within eight hours of, or at the start of the first working day following the onset of the incident. The reporting exemption for an incident of excess emission during startup, shutdown or cleaning does not relieve the owner or operator of a source with continuous monitoring equipment of the obligation of submitting reports required in 567-subrule 25.1(6). An initial report of excess emission is not required for a source with operational continuous monitoring equipment (as specified in 567-subrule 25.1(1)) if the incident of excess emission continues for less than 30 minutes and does not exceed the applicable emission standard by more than 10 percent or the applicable visible emission standard by more than 10 percent opacity. The initial report may be made by electronic mail (E-mail), in person, or by telephone and shall include as a minimum the following:
      i. The identity of the equipment or source operation from which the excess emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and expected duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps being taken to remedy the excess emission.
      vi. The steps being taken to limit the excess emission in the interim period.

   b. Written Reporting of Excess Emissions. A written report of an incident of excess emission shall be submitted as a follow-up to all required initial reports to the department within seven days of the onset of the upset condition, and shall include as a minimum the following:
      i. The identity of the equipment or source operation point from which the excess emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps that were taken to remedy and to prevent the recurrence of the incident of excess emission.
vi. The steps that were taken to limit the excess emission.

vii. If the owner claims that the excess emission was due to malfunction, documentation to support this claim. 567 IAC 24.1(1)-567 IAC 24.1(4)

3. Emergency Defense for Excess Emissions. For the purposes of this permit, an “emergency” means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include non-compliance, to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation or operator error. An emergency constitutes an affirmative defense to an action brought for non-compliance with technology based limitations if it can be demonstrated through properly signed contemporaneous operating logs or other relevant evidence that:

a. An emergency occurred and that the permittee can identify the cause(s) of the emergency;
b. The facility at the time was being properly operated;
c. During the period of the emergency, the permittee took all reasonable steps to minimize levels of emissions that exceeded the emissions standards or other requirements of the permit; and
d. The permittee submitted notice of the emergency to the director by certified mail within two working days of the time when the emissions limitations were exceeded due to the emergency. This notice fulfills the requirement of paragraph 22.108(5)"b." – See G15. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof. This provision is in addition to any emergency or upset provision contained in any applicable requirement. 567 IAC 22.108(16)

G15. Permit Deviation Reporting Requirements
A deviation is any failure to meet a term, condition or applicable requirement in the permit. Reporting requirements for deviations that result in a hazardous release or excess emissions have been indicated above (see G13 and G14). Unless more frequent deviation reporting is specified in the permit, any other deviation shall be documented in the semi-annual monitoring report and the annual compliance certification (see G4 and G5). 567 IAC 22.108(5)"b"

G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP Regulations
During the term of this permit, the permittee must notify the department of any source that becomes subject to a standard or other requirement under 567-subrule 23.1(2) (standards of performance of new stationary sources) or section 111 of the Act; or 567-subrule 23.1(3) (emissions standards for hazardous air pollutants), 567-subrule 23.1(4) (emission standards for hazardous air pollutants for source categories) or section 112 of the Act. This notification shall be submitted in writing to the department pursuant to the notification requirements in 40 CFR Section 60.7, 40 CFR Section 61.07, and/or 40 CFR Section 63.9. 567 IAC 23.1(2), 567 IAC 23.1(3), 567 IAC 23.1(4)
G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V Permit Modification

1. Off Permit Changes to a Source. Pursuant to section 502(b)(10) of the CAAA, the permittee may make changes to this installation/facility without revising this permit if:
   a. The changes are not major modifications under any provision of any program required by section 110 of the Act, modifications under section 111 of the act, modifications under section 112 of the act, or major modifications as defined in 567 IAC Chapter 22.
   b. The changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or in terms of total emissions);
   c. The changes are not modifications under any provisions of Title I of the Act and the changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or as total emissions);
   d. The changes are not subject to any requirement under Title IV of the Act (revisions affecting Title IV permitting are addressed in rules 567—22.140(455B) through 567 - 22.144(455B));
   e. The changes comply with all applicable requirements.
   f. For each such change, the permitted source provides to the department and the administrator by certified mail, at least 30 days in advance of the proposed change, a written notification, including the following, which must be attached to the permit by the source, the department and the administrator:
      i. A brief description of the change within the permitted facility,
      ii. The date on which the change will occur,
      iii. Any change in emission as a result of that change,
      iv. The pollutants emitted subject to the emissions trade
      v. If the emissions trading provisions of the state implementation plan are invoked, then Title V permit requirements with which the source shall comply: a description of how the emissions increases and decreases will comply with the terms and conditions of the Title V permit.
      vi. A description of the trading of emissions increases and decreases for the purpose of complying with a federally enforceable emissions cap as specified in and in compliance with the Title V permit; and
      vii. Any permit term or condition no longer applicable as a result of the change.

2. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), record keeping, reporting, or compliance certification requirements. 567 IAC 22.110(2)

3. Notwithstanding any other part of this rule, the director may, upon review of a notice, require a stationary source to apply for a Title V permit if the change does not meet the requirements of subrule 22.110(1). 567 IAC 22.110(3)

4. The permit shield provided in subrule 22.108(18) shall not apply to any change made pursuant to this rule. Compliance with the permit requirements that the source will meet using the emissions trade shall be determined according to requirements of the state implementation plan authorizing the emissions trade. 567 IAC 22.110(4)

5. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes, for changes that are provided for in this permit. 567 IAC 22.108(11)
G18. Duty to Modify a Title V Permit

1. Administrative Amendment.
   a. An administrative permit amendment is a permit revision that does any of the following:
      i. Correct typographical errors
      ii. Identify a change in the name, address, or telephone number of any person
          identified in the permit, or provides a similar minor administrative change at the
          source;
      iii. Require more frequent monitoring or reporting by the permittee; or
      iv. Allow for a change in ownership or operational control of a source where the
          director determines that no other change in the permit is necessary, provided that a
          written agreement containing a specific date for transfer of permit responsibility,
          coverage and liability between the current and new permittee has been submitted to
          the director.
   b. The permittee may implement the changes addressed in the request for an administrative
      amendment immediately upon submittal of the request. The request shall be submitted to the
      director.
   c. Administrative amendments to portions of permits containing provisions pursuant to Title IV
      of the Act shall be governed by regulations promulgated by the administrator under Title IV of
      the Act.

2. Minor Title V Permit Modification.
   a. Minor Title V permit modification procedures may be used only for those permit
      modifications that satisfy all of the following:
      i. Do not violate any applicable requirement;
      ii. Do not involve significant changes to existing monitoring, reporting or
          recordkeeping requirements in the Title V permit;
      iii. Do not require or change a case by case determination of an emission limitation
          or other standard, or an increment analysis;
      iv. Do not seek to establish or change a permit term or condition for which there is
          no corresponding underlying applicable requirement and that the source has assumed
          in order to avoid an applicable requirement to which the source would otherwise be
          subject. Such terms and conditions include any federally enforceable emissions caps
          which the source would assume to avoid classification as a modification under any
          provision under Title I of the Act; and an alternative emissions limits approved
          pursuant to regulations promulgated under section 112(i)(5) of the Act;
      v. Are not modifications under any provision of Title I of the Act; and
      vi. Are not required to be processed as significant modification under rule 567 -
          22.113(455B).
   b. An application for minor permit revision shall be on the minor Title V modification
      application form and shall include at least the following:
      i. A description of the change, the emissions resulting from the change, and any new
          applicable requirements that will apply if the change occurs;
      ii. The permittee's suggested draft permit;
      iii. Certification by a responsible official, pursuant to 567 IAC 22.107(4), that the
          proposed modification meets the criteria for use of minor permit modification
          procedures and a request that such procedures be used; and
iv. Completed forms to enable the department to notify the administrator and the affected states as required by 567 IAC 22.107(7).

c. The permittee may make the change proposed in its minor permit modification application immediately after it files the application. After the permittee makes this change and until the director takes any of the actions specified in 567 IAC 22.112(4) "a" to "c", the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time, the permittee need not comply with the existing permit terms and conditions it seeks to modify. However, if the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against the facility.

3. Significant Title V Permit Modification.

Significant Title V modification procedures shall be used for applications requesting Title V permit modifications that do not qualify as minor Title V modifications or as administrative amendments. These include but are not limited to all significant changes in monitoring permit terms, every relaxation of reporting or recordkeeping permit terms, and any change in the method of measuring compliance with existing requirements. Significant Title V modifications shall meet all requirements of 567 IAC Chapter 22, including those for applications, public participation, review by affected states, and review by the administrator, as those requirements that apply to Title V issuance and renewal.

The permittee shall submit an application for a significant permit modification not later than three months after commencing operation of the changed source unless the existing Title V permit would prohibit such construction or change in operation, in which event the operation of the changed source may not commence until the department revises the permit. 567 IAC 22.111-567 IAC 22.113

G19. Duty to Obtain Construction Permits

Unless exempted in 567 IAC 22.1(2) or to meet the parameters established in 567 IAC 22.1(1)"c", the permittee shall not construct, install, reconstruct or alter any equipment, control equipment or anaerobic lagoon without first obtaining a construction permit, or conditional permit, or permit pursuant to rule 567 IAC 22.8, or permits required pursuant to rules 567 IAC 22.4, 567 IAC 22.5, 567 IAC 31.3, and 567 IAC 33.3 as required in 567 IAC 22.1(1). A permit shall be obtained prior to the initiation of construction, installation or alteration of any portion of the stationary source or anaerobic lagoon. 567 IAC 22.1(1)

G20. Asbestos

The permittee shall comply with 567 IAC 23.1(3)"a", and 567 IAC 23.2(3)"g" when activities involve asbestos mills, surfacing of roadways, manufacturing operations, fabricating, insulating, waste disposal, spraying applications, demolition and renovation operations (567 IAC 23.1(3)"a"); training fires and controlled burning of a demolished building (567 IAC 23.2).

G21. Open Burning

The permittee is prohibited from conducting open burning, except as provided in 567 IAC 23.2. 567 IAC 23.2 except 23.2(3)"j", 567 IAC 23.2(3)"j" - State Only

G22. Acid Rain (Title IV) Emissions Allowances

The permittee shall not exceed any allowances that it holds under Title IV of the Act or the regulations promulgated there under. Annual emissions of sulfur dioxide in excess of the number of allowances to emit sulfur dioxide held by the owners and operators of the unit or the designated representative of the owners and operators is prohibited. Exceedences of applicable emission rates are prohibited. “Held” in this context refers to both those allowances assigned to the owners and operators by USEPA, and those allowances supplementally acquired by the owners and operators.
The use of any allowance prior to the year for which it was allocated is prohibited. Contravention of any other provision of the permit is prohibited. 567 IAC 22.108(7)

**G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements**

1. The permittee shall comply with the standards for labeling of products using ozone-depleting substances pursuant to 40 CFR Part 82, Subpart E:
   a. All containers in which a class I or class II substance is stored or transported, all products containing a class I substance, and all products directly manufactured with a class I substance must bear the required warning statement if it is being introduced into interstate commerce pursuant to § 82.106.
   b. The placement of the required warning statement must comply with the requirements pursuant to § 82.108.
   c. The form of the label bearing the required warning statement must comply with the requirements pursuant to § 82.110.
   d. No person may modify, remove, or interfere with the required warning statement except as described in § 82.112.

2. The permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 CFR Part 82, Subpart F, except as provided for MVACs in Subpart B:
   a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to § 82.156.
   b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to § 82.158.
   c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to § 82.161.
   d. Persons disposing of small appliances, MVACs, and MVAC-like appliances must comply with reporting and recordkeeping requirements pursuant to § 82.166. ("MVAC-like appliance" as defined at § 82.152)
   e. Persons owning commercial or industrial process refrigeration equipment must comply with the leak repair requirements pursuant to § 82.156.
   f. Owners/operators of appliances normally containing 50 or more pounds of refrigerant must keep records of refrigerant purchased and added to such appliances pursuant to § 82.166.

3. If the permittee manufactures, transforms, imports, or exports a class I or class II substance, the permittee is subject to all the requirements as specified in 40 CFR part 82, Subpart A, Production and Consumption Controls.

4. If the permittee performs a service on motor (fleet) vehicles when this service involves ozone-depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term "MVAC" as used in Subpart B does not include the air-tight sealed refrigeration system used as refrigerated cargo, or system used on passenger buses using HCFC-22 refrigerant.

5. The permittee shall be allowed to switch from any ozone-depleting or greenhouse gas generating substances to any alternative that is listed in the Significant New Alternatives Program (SNAP) promulgated pursuant to 40 CFR part 82, Subpart G, Significant New Alternatives Policy Program.
G24. Permit Reopenings

1. This permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. 567 IAC 22.108(9) "c"

2. Additional applicable requirements under the Act become applicable to a major part 70 source with a remaining permit term of 3 or more years. Revisions shall be made as expeditiously as practicable, but not later than 18 months after the promulgation of such standards and regulations.
   a. Reopening and revision on this ground is not required if the permit has a remaining term of less than three years;
   b. Reopening and revision on this ground is not required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions have been extended pursuant to 40 CFR 70.4(b)(10)(i) or (ii) as amended to May 15, 2001.
   c. Reopening and revision on this ground is not required if the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. 567 IAC 22.108(17) "a", 567 IAC 22.108(17) "b"

3. A permit shall be reopened and revised under any of the following circumstances:
   a. The department receives notice that the administrator has granted a petition for disapproval of a permit pursuant to 40 CFR 70.8(d) as amended to July 21, 1992, provided that the reopening may be stayed pending judicial review of that determination;
   b. The department or the administrator determines that the Title V permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the Title V permit;
   c. Additional applicable requirements under the Act become applicable to a Title V source, provided that the reopening on this ground is not required if the permit has a remaining term of less than three years, the effective date of the requirement is later than the date on which the permit is due to expire, or the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. Such a reopening shall be complete not later than 18 months after promulgation of the applicable requirement.
   d. Additional requirements, including excess emissions requirements, become applicable to a Title IV affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.
   e. The department or the administrator determines that the permit must be revised or revoked to ensure compliance by the source with the applicable requirements. 567 IAC 22.114(1)

4. Proceedings to reopen and reissue a Title V permit shall follow the procedures applicable to initial permit issuance and shall effect only those parts of the permit for which cause to reopen exists. 567 IAC 22.114(2)

5. A notice of intent shall be provided to the Title V source at least 30 days in advance of the date the permit is to be reopened, except that the director may provide a shorter time period in the case of an emergency. 567 IAC 22.114(3)
G25. Permit Shield
1. The director may expressly include in a Title V permit a provision stating that compliance with
the conditions of the permit shall be deemed compliance with any applicable requirements as of the
date of permit issuance, provided that:
   a. Such applicable requirements are included and are specifically identified in the permit; or
   b. The director, in acting on the permit application or revision, determines in writing that
      other requirements specifically identified are not applicable to the source, and the permit
      includes the determination or a concise summary thereof.
2. A Title V permit that does not expressly state that a permit shield exists shall be presumed not to
   provide such a shield.
3. A permit shield shall not alter or affect the following:
   a. The provisions of Section 303 of the Act (emergency orders), including the authority of
      the administrator under that section;
   b. The liability of an owner or operator of a source for any violation of applicable
      requirements prior to or at the time of permit issuance;
   c. The applicable requirements of the acid rain program, consistent with Section 408(a) of
      the Act;
   d. The ability of the department or the administrator to obtain information from the facility
      pursuant to Section 114 of the Act.
567 IAC 22.108 (18)

G26. Severability
The provisions of this permit are severable and if any provision or application of any provision is
found to be invalid by this department or a court of law, the application of such provision to other
circumstances, and the remainder of this permit, shall not be affected by such finding. 567 IAC
22.108 (8)

G27. Property Rights
The permit does not convey any property rights of any sort, or any exclusive privilege. 567 IAC
22.108 (9)"d"

G28. Transferability
This permit is not transferable from one source to another. If title to the facility or any part of it is
transferred, an administrative amendment to the permit must be sought consistent with the
requirements of 567 IAC 22.111(1). 567 IAC 22.111 (1)"d"

G29. Disclaimer
No review has been undertaken on the engineering aspects of the equipment or control equipment
other than the potential of that equipment for reducing air contaminant emissions. 567 IAC
22.3(3)"c"

G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification
The permittee shall notify the department's stack test contact in writing not less than 30 days before
a required test or performance evaluation of a continuous emission monitor is performed to
determine compliance with applicable requirements of 567 – Chapter 23 or a permit condition. Such
notice shall include the time, the place, the name of the person who will conduct the test and other
information as required by the department. If the owner or operator does not provide timely notice
to the department, the department shall not consider the test results or performance evaluation
results to be a valid demonstration of compliance with applicable rules or permit conditions. Upon
written request, the department may allow a notification period of less than 30 days. At the
department’s request, a pretest meeting shall be held not later than 15 days prior to conducting the
compliance demonstration. A testing protocol shall be submitted to the department no later than 15 days before the owner or operator conducts the compliance demonstration. A representative of the department shall be permitted to witness the tests. Results of the tests shall be submitted in writing to the department's stack test contact in the form of a comprehensive report within six weeks of the completion of the testing. Compliance tests conducted pursuant to this permit shall be conducted with the source operating in a normal manner at its maximum continuous output as rated by the equipment manufacturer, or the rate specified by the owner as the maximum production rate at which the source shall be operated. In cases where compliance is to be demonstrated at less than the maximum continuous output as rated by the equipment manufacturer, and it is the owner's intent to limit the capacity to that rating, the owner may submit evidence to the department that the source has been physically altered so that capacity cannot be exceeded, or the department may require additional testing, continuous monitoring, reports of operating levels, or any other information deemed necessary by the department to determine whether such source is in compliance.

Stack test notifications, reports and correspondence shall be sent to:

Stack Test Review Coordinator
Iowa DNR, Air Quality Bureau
Wallace State Office Building
502 E 9th St.
Des Moines, IA  50319-0034
(515) 725-9545

Within Polk and Linn Counties, stack test notifications, reports and correspondence shall also be directed to the supervisor of the respective county air pollution program.

567 IAC 25.1(7)"a", 567 IAC 25.1(9)

G31. Prevention of Air Pollution Emergency Episodes
The permittee shall comply with the provisions of 567 IAC Chapter 26 in the prevention of excessive build-up of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these contaminants on the health of persons. 567 IAC 26.1(1)

G32. Contacts List
The current address and phone number for reports and notifications to the EPA administrator is:

Iowa Compliance Officer
Air Branch
Enforcement and Compliance Assurance Division
U.S. EPA Region 7
11201 Renner Blvd.
Lenexa, KS 66219
(913) 551-7020

The current address and phone number for reports and notifications to the department or the Director is:

Chief, Air Quality Bureau
Iowa Department of Natural Resources
Wallace State Office Building
502 E 9th St.
Des Moines, IA  50319-0034
(515) 725-8200
Reports or notifications to the DNR Field Offices or local programs shall be directed to the supervisor at the appropriate field office or local program. Current addresses and phone numbers are:
