Iowa Department of Natural Resources
Title V Operating Permit

Name of Permitted Facility: Muscatine Power and Water
Facility Location: 1700 Dick Drake Way
Muscatine, Iowa 52761

Air Quality Operating Permit Number: 98-TV-021R3-M003
Expiration Date: November 2, 2020
Permit Renewal Application Deadline: May 2, 2020

EIQ Number: 92-3726
Facility File Number: 70-01-011

Responsible Official
Name: Mary Jean Brewster
Title: Manager, Environmental Affairs
Mailing Address: 3205 Cedar Street, PO Box 899
Muscatine, Iowa 52761-2204
Phone #: (563) 262-3259

Permit Contact Person for the Facility
Name: Mary Jean Brewster
Title: Manager, Environmental Affairs
Mailing Address: 3205 Cedar Street, PO Box 899
Muscatine, Iowa 52761-2204
Phone #: (563) 262-3259

This permit is issued in accordance with 567 Iowa Administrative Code Chapter 22, and is issued subject to the terms and conditions contained in this permit.

For the Director of the Department of Natural Resources

Lori Hanson, Supervisor of Air Operating Permits Section Date

Appendix B: Acid Rain Phase II Permit ....................................................................................................................... 242
Appendix C: Cross-State Air Pollution Rule (CSAPR) Permit ....................................................................................... 251
Abbreviations

acfm..........................Actual cubic feet per minute
bhp..........................brake horse power
CE ..........................control equipment
CEM ..........................continuous emissions monitor
cfm.........................cubic feet per minute
CFR ..........................Code of Federal Regulations
dscfm ..........................dry standard cubic feet per minute
EQ ..........................Emissions inventory questionnaire
EP ..........................emission point
EU ..........................emission unit
°F ..........................Degrees fahrenheit
gr./dscf .......................Grains per dry standard cubic foot
gal............................gallon
IAC..........................Iowa Administrative Code
IDNR ..........................Iowa Department of Natural Resources
kW ..........................kilowatt
lb./hr ..........................Pounds per hour
lb./mmBtu ....................Pounds per million British thermal units
MVAC..........................Motor vehicle air conditioner
NAICS..........................North American Industry Classification System
NSPS ..........................New source performance standards
SCC..........................Source Classification Codes
scfm..........................standard cubic feet per minute
SIC..........................Standard Industrial Classification
Tons/hr ..........................Tons per hour
T-R ..........................Transformer-Rectifier (Electrostatic Precipitators)
TPY ..........................Tons per year
USEPA .......................United States Environmental Protection Agency
VMT ..........................Vehicle Mile Traveled

Pollutants
PM ..........................Particulate matter (equivalent to TSP, total suspended particles)
PM_{10} .......................Particulate matter ten microns and less in diameter
SO_2 ..........................Sulfur dioxide
SO_x ..........................Sulfur oxides
NO_x ..........................Nitrogen oxides
VOC ..........................Volatile organic compounds
CO ..........................Carbon monoxide
HAP ..........................Hazardous air pollutants
I. Facility Description and Equipment List

Facility Name: Muscatine Power and Water
Permit Number: 98-TV-021R3-M003

Facility Description: Electrical Generation (SIC 4911) and Potable Water Plant (SIC 4941)

II. Plant-Wide Conditions

Facility Name: Muscatine Power and Water
Permit Number: 98-TV-021R3-M003

Permit conditions are established in accord with 567 Iowa Administrative Code rule 22.108

Permit Duration

The term of this permit is: Five (5) years.
Commencing on: November 3, 2015
Ending on: November 2, 2020

Amendments, modifications and reopenings of the permit shall be obtained in accordance with 567 Iowa Administrative Code rules 22.110 - 22.114. Permits may be suspended, terminated, or revoked as specified in 567 Iowa Administrative Code Rules 22.115.

Emission Limits

Unless specified otherwise in the Source Specific Conditions, the following limitations and supporting regulations apply to all emission points at this plant:

Opacity (visible emissions): 40% opacity
Authority for Requirement: 567 IAC 23.3(2)"d"

Sulfur Dioxide (SO₂): 500 parts per million by volume
Authority for Requirement: 567 IAC 23.3(3)"e"

Particulate Matter:
No person shall cause or allow the emission of particulate matter from any source in excess of the emission standards specified in this chapter, except as provided in 567 – Chapter 24. For sources constructed, modified or reconstructed after July 21, 1999, the emission of particulate matter from any process shall not exceed an emission standard of 0.1 grain per dry standard cubic foot of exhaust gas, except as provided in 567 – 21.2(455B), 23.1(455B), 23.4(455B) and 567 – Chapter 24.
For sources constructed, modified or reconstructed prior to July 21, 1999, the emission of particulate matter from any process shall not exceed the amount determined from Table I, or amount specified in a permit if based on an emission standard of 0.1 grain per standard cubic foot of exhaust gas or established from standards provided in 23.1(455B) and 23.4(455B).
Authority for Requirement: 567 IAC 23.3(2)"a"
**Fugitive Dust:**  Attainment and Unclassified Areas - A person shall take reasonable precautions to prevent particulate matter from becoming airborne in quantities sufficient to cause a nuisance as defined in Iowa Code section 657.1 when the person allows, causes or permits any materials to be handled, transported or stored or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, with the exception of farming operations or dust generated by ordinary travel on unpaved roads. Ordinary travel includes routine traffic and road maintenance activities such as scarifying, compacting, transporting road maintenance surfacing material, and scraping of the unpaved public road surface. (the preceding sentence is State Only) All persons, with the above exceptions, shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate. The public highway authority shall be responsible for taking corrective action in those cases where said authority has received complaints of or has actual knowledge of dust conditions which require abatement pursuant to this subrule. Reasonable precautions may include, but not be limited to, the following procedures.

1. Use, where practical, of water or chemicals for control of dusts in the demolition of existing buildings or structures, construction operations, the grading of roads or the clearing of land.
2. Application of suitable materials, such as but not limited to asphalt, oil, water or chemicals on unpaved roads, material stockpiles, race tracks and other surfaces which can give rise to airborne dusts.
3. Installation and use of containment or control equipment, to enclose or otherwise limit the emissions resulting from the handling and transfer of dusty materials, such as but not limited to grain, fertilizer or limestone.
4. Covering, at all times when in motion, open-bodied vehicles transporting materials likely to give rise to airborne dusts.
5. Prompt removal of earth or other material from paved streets or to which earth or other material has been transported by trucking or earth-moving equipment, erosion by water or other means.
6. Reducing the speed of vehicles traveling over on-property surfaces as necessary to minimize the generation of airborne dusts.

Authority for Requirement: 567 IAC 23.3(2)"e"

---

**Agreements between IDNR and MP&W:**

Muscatine Power and Water (MP&W) shall comply with all requirements of the PM LAER and offsets agreement signed by MP&W on 12/27/79 and signed by Iowa Department of Environmental Quality (IDEQ, the permitting authority at that time) and the revised SO2 LAER and offsets agreement signed by MP&W on 12/7/82 and signed by IDEQ on 12/13/82 remain in effect.

Authority for Requirement: 567 IAC 22.108(1)
NSPS and NESHAP Applicability

40 CFR 60 Subpart A Requirements
This facility is an affected source and these General Provisions apply to the facility. The affected units are EU21, EU22, EU23A, EU90, EU820, EU930, EU300, EU301, EU302, EU310B, EU311, EU311B, EU312, EU312B, EU313B, EU314, EU320, EU322, EU333, EU341, EU351, EU360, and EU370.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR 60 Subpart A
567 IAC 23.1(2)

40 CFR 60 Subpart Da Requirements
This facility is subject to the Standards of Performance for Electric Utility Steam Generating Units for which Construction is Commenced after September 18, 1978. The affected unit is EU90.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR 60 Subpart Da
567 IAC 23.1(2)"z"

40 CFR 60 Subpart Y Requirements
This facility is subject to Standards of Performance for Coal Preparation Plants. The affected units are EU21, EU22, EU23A, EU300, EU301, EU302, EU310B, EU311, EU311B, EU312, EU312B, EU313B, EU314, EU320, EU322, EU333, EU341, EU351, EU360, and EU370.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR 60 Subpart Y
567 IAC 23.1(2)"v"

40 CFR 63 Subpart A Requirements
This facility is an affected source and these General Provisions apply to the facility. The affected units are EU60, EU70, EU80, EU90, EU50, EU820, and EU930.
See Appendix A for a link to the Standard.
Authority for Requirement: 40 CFR 63 Subpart A
567 IAC 23.1(4)"a"

40 CFR 63 Subpart ZZZZ Requirements
This facility is subject to National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines. The affected units are EU50, EU820, and EU930.
See Appendix for a link to the Standard.
Authority for Requirement: 40 CFR 63 Subpart ZZZZ
567 IAC 23.1(4)"cz"
40 CFR 63 Subpart DDDDD Requirements
This facility is subject to National Emission Standards For Hazardous Air Pollutants for Industrial, Commercial, And Institutional Boilers And Process Heaters. The affected units are EU60 and EU70. See Appendix A for a link to the Standard. Authority for Requirement: 40 CFR 63 Subpart DDDDD

40 CFR 63 Subpart UUUUU Requirements
This facility is subject to National Emission Standards for Hazardous Air Pollutants from Coal and Oil-fired Electric Utility Steam Generating Units (EGU-MATS). The affected units are EU80 and EU90. See Appendix A for a link to the Standard. Authority for Requirement: 40 CFR 63 Subpart UUUUU
III. Emission Point-Specific Conditions

Facility Name: Muscatine Power and Water
Permit Number: 98-TV-021R3-M003

Emission Point ID Number: 15

Associated Equipment

Associated Emission Unit ID Number: 15

Emission Unit vented through this Emission Point: 15
Emission Unit Description: Unleaded Gasoline Storage Tank Vent
Raw Material/Fuel: Unleaded Gasoline
Rated Capacity: 1000 Gallons

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

There are no emission limits at this time.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 21 (Vents Internally)

Associated Equipment

Rail Unloading System: Unit 9 components:
Associated Emission Unit ID Numbers: 20, 21, 22, and 23
Emissions Control Equipment ID Number: CE21 for all Emission Units
Emissions Control Equipment Description: Fabric Filter Dust Collector
Emissions Control Equipment ID Number: CE24A for Emission Units 21, 22, and 23
Emissions Control Equipment Description: Dust Suppression System

-----

Emission Units vented through this Emission Point: 20
Emission Unit Description: Rail Hopper A, B and C
Raw Material/Fuel: Coal
Rated Capacity: 1400 tons/hr

Emission Units vented through this Emission Point: 21
Emission Unit Description: Feeder Belt A
Raw Material/Fuel: Coal
Rated Capacity: 700 tons/hr

Emission Units vented through this Emission Point: 22
Emission Unit Description: Feeder Belt B
Raw Material/Fuel: Coal
Rated Capacity: 700 tons/hr

Emission Units vented through this Emission Point: 23
Emission Unit Description: Transfer Conveyor Load
Raw Material/Fuel: Coal
Rated Capacity: 1400 tons/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 20%
Authority for Requirement: DNR Construction Permit 93-A-288-S4
567 IAC 23.1(2)v
40 CFR 60 Subpart Y
Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit: 0.036 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 93-A-288-S4

Pollutant: Particulate Matter (PM$_{10}$)
Emission Limit: 0.86 lb/hr; 0.56 tons/yr
Authority for Requirement: DNR Construction Permit 93-A-288-S4

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.01 gr/dscf; 0.86 lb/hr; 0.56 tons/yr
Authority for Requirement: DNR Construction Permit 93-A-288-S4
567 IAC 23.3(2)"a"

**Operational Limits & Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Operating Limits:**

A. This emissions unit shall not operate more than 1295 hours in any rolling twelve-month period.
B. The differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.
C. The owner or operator shall develop and maintain an operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 93-A-288-S4

**Reporting & Record Keeping:**
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain the following monthly records:
   i. the number of hours that the emissions unit operated; and
   ii. the rolling twelve-month total number of hours that the emissions unit operated.
B. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
C. The owner or operator shall collect and record the pressure drop across the baghouse,
inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.

D. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

Authority for Requirement: DNR Construction Permit 93-A-288-S4

**NSPS and NESHAP Requirements:**

This unit is subject to NSPS Subpart Y (§60.250) – Standards of Performance for Coal Preparation Plants and the General Provisions of Subpart A.

Authority for Requirement: DNR Construction Permit 93-A-288-S4

The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

**Emission Point Characteristics**

*This emission point shall conform to the conditions listed below.*

- Stack Height (ft, from the ground): 25.6
- Stack Opening (inches, dia.): 420 in. x 360 in.
- Exhaust Temperature (°F): Ambient
- Exhaust Flowrate (scfm): 35,693
- Discharge Style: Vents Inside

Authority for Requirement: DNR Construction Permit 93-A-288-S4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may
vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

- **Agency Approved Operation & Maintenance Plan Required?** □ Yes □ No ❌
- **Facility Maintained Operation & Maintenance Plan Required?** □ Yes □ No ❌
- **Compliance Assurance Monitoring (CAM) Plan Required?** □ Yes □ No ❌

Authority for Requirement: 567 IAC 22.108(3)

DNR Construction Permit 13-A-139

Pollutant: Particulate Matter (PM$_{2.5}$) for Coal Storage Pile, EU27
Emission Limit: For this emissions unit the limits are expressed in the form of a work practice instead of an emission limit. See the Operating Limits section of this permit for the work practice requirements.
Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-139

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"e"

**Operational Limits & Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Operating Limits:**

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, Coal Pile Bulldozing (EU27A) is limited to operating between 6:00 AM and 12:00 midnight.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, Coal Pile Truck Unloading (EU342) is limited to operating between 8:00 AM and 4:00 PM.

C. The operation of the Radial Stacker Discharge (EU26) is limited to a maximum of 1295 hours in any rolling 12-month period.

D. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the ground surface area of the coal pile (EU27) shall not exceed 20 acres (871,200 square feet).

Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-139
Reporting & Record Keeping:

The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the following emissions units operated: Radial Stacker Discharge (EU26), Coal Pile Bulldozing (EU27A) and Coal Pile Truck Unloading (EU342). This record shall include the following information: date of operation, initial startup time of operation and final end time of operation.

B. The owner or operator shall maintain the following monthly records on the Radial Stacker Discharge (EU26):
   i. the number of hours that the emissions unit operated; and
   ii. the rolling 12-month total of the number of hours that the emissions unit operated.

C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain records on the silt content and the moisture content of the material handled in these emissions units. The moisture content of the coal handled each month shall be determined from the records kept on the moisture content of the coal burned in the facility’s boilers. This shall be done by: 1.) multiplying the moisture content determined daily by the amount of coal burned each day, 2.) summing the daily amount of moisture in the coal for the entire month and 3.) dividing the monthly total of moisture in the coal by the amount of coal burned in the month.

D. The owner or operator shall maintain records on the surface area of the coal pile. By either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall submit to the Department its methodology for determining the size of the coal pile. After the coal pile is measured using its methodology, the owner or operator shall submit a report to the Department by November 1, 2013 indicating the size of the coal pile. Thereafter, the coal pile shall be measured semi-annually and information on the size of the coal pile shall be submitted with the facility’s semi-annual reports.

E. For the Radial Stacker Discharge (EU26), the PM$_{2.5}$ emission rates established in the Emission Limits section above are based on the maximum capacity of the unit and the following equation and parameters:

$$ E = (k) \times (0.0032) \times (U/5)^{1.3} \times (M/2)^{1.4} $$  (AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:
- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M$ = minimum material moisture content, 10.35%, provided by applicant

F. For the Coal Pile Truck Unloading (EU342), the PM$_{2.5}$ emission rates established in the Emission Limits section of this permit are based on the maximum capacity of the unit and the following equation and parameters:

$$ E = (k) \times (0.0032) \times (U/5)^{1.3} \times (M/2)^{1.4} $$  (AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:
- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M$ = minimum material moisture content, 10.35%, provided by applicant
G. For the Coal Pile Bulldozing (EU27A), the PM$_{2.5}$ emission rate established in the Emission Limits section this permit is based on the maximum capacity of the unit and the following equation and parameters:

$$ER = (0.022) \times \frac{78.4 \times (s)^{1.2}}{(M)^{1.3}}$$  
(EE-42, Table 11.9-1, bulldozing coal, 7/1998)

Where:
- $ER =$ emission rate, lbs PM$_{2.5}$ per hour
- $0.022 =$ scaling factor for PM$_{2.5}$
- $s =$ material silt content, 7.23% provided by the applicant; and
- $M =$ minimum material moisture content, 10.35%, provided by applicant

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)

Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit: 0.0431 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-140

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"e"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, this emissions unit is limited to operating between March 1 and November 30.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit
issuance, whichever comes later, this emissions unit is limited to operating between 6:00 AM
and 12:00 midnight.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as
amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-140

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection
upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit
issuance, whichever comes later, the owner or operator shall maintain records on the
moisture content of the material handled in this emissions unit. The moisture content of the
coal handled each month shall be determined from the records kept on the moisture content
of the coal burned in the facility’s boilers. This shall be done by: 1.) multiplying the moisture
content determined daily by the amount of coal burned each day, 2.) summing the daily
amount of moisture in the coal for the entire month, and 3.) dividing the monthly total of
moisture in the coal by the amount of coal burned in the month.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit
issuance, whichever comes later, the owner or operator shall maintain a daily record of when
this emissions unit operated. This record shall include the following information: date of
operation, initial start up time of operation and final end time of operation.

C. The PM$_{2.5}$ emission rate established in Emission Limits is based on the maximum capacity of
the unit and following equation and parameters:
$$E = (k) (0.0032) (U/5)^{1.3} / (M/2)^{1.4}$$
(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)
Where:
- $E =$ emission factor in lbs PM$_{2.5}$/ ton material
- $k =$ particle size multiplier, 0.053 for PM$_{2.5}$
- $U =$ mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M =$ minimum material moisture content, 10.35 %, provided by applicant

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014;
as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-140

NSPS and NESHAP Requirements:

This emissions unit is subject to the requirements of 40 CFR Part 60, Subpart Y, Standards of
Performance for Coal Preparation Plants. (IAC 23.1(2)”v”). The owner or operator shall notify
the Iowa DNR Air Quality Bureau prior to the start up of this equipment. Upon start up, the unit
shall then comply with requirements of the Subpart and demonstrate compliance with the opacity
limit with a one-time stack test.

Authority for Requirement: DNR Construction Permit 13-A-140
The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Stack Testing:**
- **Pollutant - Opacity**
- 1st Stack Test to be Completed by - Within sixty (60) days after achieving maximum production rate and no later than one hundred eighty (180) days after the startup date of the equipment.
- **Test Method -** 40 CFR 60, Appendix A, Method 9
- Authority for Requirement - DNR Construction Permit 13-A-140

*The owner of this equipment or the owner's authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test or performance evaluation of a continuous emission monitor. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing.* 567 IAC 25.1(7)

Authority for Requirement: DNR Construction Permit 80-A-193-S3
567 IAC 23.3(2)a
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. The differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.
B. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.
C. The stack shall be raised to a minimum of 10 feet from the ground by no later than sixty (60) days from the date of the permit issuance. The stack configuration shall be vertical and unobstructed.

Authority for Requirement: DNR Construction Permit 80-A-193-S3

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.
C. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.
D. The owner or operator shall submit a notification to the Iowa DNR, Air Quality Bureau when the modification to the stack height has been completed.

Authority for Requirement: DNR Construction Permit 80-A-193-S3

NSPS and NESHAP Requirements:

These emissions units are subject to the requirements of the New Source Performance Standard (NSPS) for Coal Preparation Plants (40 CFR 60 Subpart Y, 567 IAC 23.1(2)”v”) and General Provisions: Subpart A.

Authority for Requirement: DNR Construction Permit 80-A-193-S3
The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 10 (minimum)
Stack Opening (inches, dia.): 9.625 x 10.625
Exhaust Temperature (°F): Ambient
Exhaust Flow Rate (scfm): 3,900
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 80-A-193-S3

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Stack Testing:

Pollutant – Particulate Matter (PM)
Stack Test to be Completed by – November 2, 2017
Test Method - 40 CFR 60, Appendix A, Method 5
40 CFR 51, Appendix M, Method 202
Authority for Requirement – 567 IAC 22.108(3)

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

**Operational Limits & Requirements**  
*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**
A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the equipment covered by this permit (EU312A) is limited to operating between 6:00 AM and 10:00 PM.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.

C. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

D. The Barge Coal Unloading System (EU300) shall not be used to convey coal unless the following conditions are met:

i. Muscatine Power and Water shall notify the Department within 90 days in advance of the anticipated Barge Coal Unloading (UC-1) to Live Storage Coal Silo (LSCS-1). The Department shall determine if the proposed start-up of Barge Coal Unloading System is an emissions increase for the purposes of Prevention Significant of Deterioration (PSD).

ii. Muscatine Power and Water shall notify the Department of its intent to demonstrate compliance at least 30 days in advance of planned testing. Muscatine Power and Water shall demonstrate compliance with particulate matter and opacity limitations specified in condition 10 at a process capacity at or near the permitted capacity of 1,500 tons of coal per hour associated with Barge Coal Unloading System within 60 days of achieving maximum production or within 180 days after start-up.

iii. This Condition D. shall not apply when Barge Coal Unloading System operates for any purpose, such as maintenance, without conveying coal.

DNR Construction Permit 80-A-194-S3

Reporting and Record Keeping:
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the equipment covered by this permit operates. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not
apply on the days that the equipment is not in operation.

D. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

Authority for Requirement: DNR Construction Permit 80-A-194-S3

NSPS and NESHAP Requirements:

These emissions units are subject to the requirements of the New Source Performance Standard (NSPS) for Coal Preparation Plants (40 CFR 60 Subpart Y, 567 IAC 23.1(2)“v”) and General Provisions Subpart A.

Authority for Requirement: DNR Construction Permit 80-A-194-S3

The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)
At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 157.5
Stack Opening (inches, dia.): 24
Exhaust Temperature (°F): Ambient
Exhaust Flowrate (scfm): 6,200
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 80-A-194-S3

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the
temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Stack Testing**

- **Pollutant – Opacity**
  - Stack Test to be Completed by – When at a process capacity or near the permitted capacity of 1,500 tons of coal per hour associated with Barge Coal Unloading System within 60 days of achieving maximum production or within 180 days after start-up.
  - Test Method - Iowa Compliance Sampling Manual Method 5
  - Authority for Requirement – DNR Construction Permit 80-A-194-S3

- **Pollutant – Particulate Matter (PM)**
  - Stack Test to be Completed by – When at a process capacity or near the permitted capacity of 1,500 tons of coal per hour associated with Barge Coal Unloading System within 60 days of achieving maximum production or within 180 days after start-up.
  - Test Method - 40 CFR 60, Appendix A, Method 5
  - 40 CFR 51, Appendix M, Method 202
  - Authority for Requirement – Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
  - DNR Construction Permit 80-A-194-S3

*The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)*

**Opacity Monitoring**

The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

The emission point shall be observed to ensure that no visible emissions occur during the material handling operation of the unit. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required.

If an opacity >20% is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If weather
conditions prevent the observer from conducting an opacity observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake opacity readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒
Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 311B (Fugitive)

Associated Equipment

Associated Emission Unit ID Numbers: 311B

Emission Units vented through this Emission Point: 311B
Emission Unit Description: Reclaim Conveyor-2 Discharge/Live Storage Coal Silo-2 Load
Raw Material/Fuel: Coal
Rated Capacity: 750 tons/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 20%
Authority for Requirement: DNR Construction Permit 00-A-684-S1
567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit: 0.0218 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 00-A-684-S1

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"c"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, this emissions unit is limited to operating between 6:00 AM and 10:00 PM.
Reporting and Record Keeping:
All records as required by this permit shall be kept on-site for a minimum of five (5) years and shall be available for inspection by the DNR. Records shall be legible and maintained in an orderly manner.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain records on the moisture content of the material handled in this emissions unit. The moisture content of the coal handled each month shall be determined from the records kept on the moisture content of the coal burned in the facility’s boilers. This shall be done by: 1.) multiplying the moisture content determined daily by the amount of coal burned each day, 2.) summing the daily amount of moisture in the coal for the entire month and 3.) dividing the monthly total of moisture in the coal by the amount of coal burned in the month.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when this emissions unit operated. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

C. The PM$_{2.5}$ emission rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and following equation and parameters:

\[
E = (k) \left(0.0032\right) \left(\frac{U}{5}\right)^{1.3} / \left(\frac{M}{2}\right)^{1.4} \quad \text{(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)}
\]

Where:
- \(E\) = emission factor in lbs PM$_{2.5}$/ ton material
- \(k\) = particle size multiplier, 0.053 for PM$_{2.5}$
- \(U\) = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- \(M\) = minimum material moisture content, 10.35 %, provided by applicant

The emission rate also includes potential emissions from a closed manway hatch. Emissions from the closed hatch are estimated at 1% of the emissions due to material handling.

Authority for Requirement:  Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 00-A-684-S1

NSPS and NESHAP Requirements:

This emissions unit is subject to the requirements of 40 CFR Part 60, Subpart Y, “Standards of Performance for Coal Preparation Plants.” (IAC 23.1(2)“v”) and the General Provisions, Subpart A.

Authority for Requirement:  DNR Construction Permit 00-A-684-S1
The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

567 IAC 23.3(2)"a"
**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Operating Limits:**

A. This emissions unit shall not operate more than 4000 hours in any rolling twelve-month period.

B. The differential pressure drop across the baghouse shall be maintained between 1 and 10 inches water column while the equipment is in operation.

C. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

D. The transfer of the dry ChemMod additive shall be done in an enclosed conveyor. Dust curtains or other types of enclosures shall be used to minimize the emissions of particulate emissions.

**Authority for Requirement:** Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
DNR Construction Permit 93-A-286-S5

**Reporting & Record Keeping:**

The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain the following monthly records:
   i. the number of hours that the emissions unit operated; and
   ii. the rolling twelve-month total number of hours that the emissions unit operated.

B. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

C. The owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.

D. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

**Authority for Requirement:** Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
DNR Construction Permit 93-A-286-S5
**NSPS and NESHAP Requirements:**

This unit is subject to NSPS Subpart Y (§60.250) – Standards of Performance for *Coal Preparation Plants* and the *General Provisions* of Subpart A.

Authority for Requirement: DNR Construction Permit 93-A-286-S5

The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"

40 CFR 60 Subpart Y

**Emission Point Characteristics**

*This emission point shall conform to the conditions listed below.*

Stack Height (ft, from the ground): 5
Stack Opening (inches, dia.): 96 x 96
Exhaust Temperature (°F): Ambient
Exhaust Flow Rate (scfm): 9,000
Discharge Style: Vent Inside

Authority for Requirement: DNR Construction Permit 93-A-286-S5

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**  
The emissions from this emission point shall not exceed the levels specified below.

- **Pollutant:** Opacity  
  **Emission Limit:** 20%  
  **Authority for Requirement:** DNR Construction Permit 80-A-196-S4  
  567 IAC 23.1(2)v  
  40 CFR 60 Subpart Y

- **Pollutant:** Particulate Matter (PM$_{2.5}$)  
  **Emission Limit:** 0.0155 lb/hr  
  **Authority for Requirement:** Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
  DNR Construction Permit 80-A-196-S4

- **Pollutant:** Particulate Matter (PM$_{10}$)  
  **Emission Limit:** 0.34 lb/hr  
  **Authority for Requirement:** DNR Construction Permit 80-A-196-S4
Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.34 lb/hr, 0.01 gr/dscf

Authority for Requirement: DNR Construction Permit 80-A-196-S4
567 IAC 23.3(2)“a”

(1) Pursuant to the Federal PSD permit issued on January 24, 1980 for boiler #9 and the LAER agreement between the Department and Muscatine Power and Water, signed on December 29, 1979, all coal handling systems associated with boiler #9 are subject to a 0.01 gr/dscf standard for particulate matter.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. The differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.
B. The owner or operator shall develop an operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 80-A-196-S4

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
B. The owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.
C. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

Authority for Requirement: DNR Construction Permit 80-A-196-S4

NSPS and NESHAP Requirements:

This unit is subject to NSPS Subpart Y (§60.250) – Standards of Performance for Coal Preparation Plants and the General Provisions of Subpart A.

Authority for Requirement: DNR Construction Permit 80-A-196-S4
The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

**Emission Point Characteristics**

*This emission point shall conform to the conditions listed below.*

Stack Height (ft, from the ground): 27.5  
Stack Opening (inches, dia.): 24  
Exhaust Temperature (°F): Ambient  
Exhaust Flow Rate (scfm): 3,933  
Discharge Style: Vertical Unobstructed  

Authority for Requirement: DNR Construction Permit 80-A-196-S4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Opacity Monitoring**

The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

The emission point shall be observed to ensure that no visible emissions occur during the material handling operation of the unit. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required.

If an opacity > 20% is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If weather conditions prevent the observer from conducting an opacity observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake opacity readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"c"
Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the equipment covered by this permit (EU330) is limited to operating between 8:00 AM and 4:00 PM.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the equipment covered by this permit operates. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain records on the moisture content of the material handled in this emissions unit. The moisture content of the coal handled each month shall be determined from the records kept on the moisture content of the coal burned in the facility’s boilers. This shall be done by: 1.) multiplying the moisture content determined daily by the amount of coal burned each day, 2.) summing the daily amount of moisture in the coal for the entire month and 3.) dividing the monthly total of moisture in the coal by the amount of coal burned in the month.

C. The PM$_{2.5}$ emission rate established in Permit Condition 10 is based on the maximum capacity of the unit and following equation and parameters:

$$E = (k)(0.0032)(U/5)^{1.3}/(M/2)^{1.4}$$

(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:
- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M$ = minimum material moisture content, 10.35%, provided by the applicant.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.

B. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 80-A-007-S3

**Reporting & Record Keeping:**

*The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.*

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.

C. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

Authority for Requirement: DNR Construction Permit 80-A-007-S3
NSPS and NESHAP Requirements:
These emission units are subject to the requirements of 40 CFR Part 60, Subpart Y, Standards of Performance for Coal Preparation Plants (IAC 23.1(2)"v") and General Provisions, Subpart A.

Authority for Requirement: DNR Construction Permit 80-A-007-S3

The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height (feet from the ground): 49.5
Stack Diameter (inches): 24
Stack Exhaust Flow Rate (scfm): 9,500
Stack Temperature (°F): Ambient
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 80-A-007-S3

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

_The owner/operator of this equipment shall comply with the monitoring requirements listed below._

**Opacity Monitoring:**

The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

The emission point shall be observed to ensure that no visible emissions occur during the material handling operation of the unit. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required.

If an opacity > 20% is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If weather conditions prevent the observer from conducting an opacity observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake opacity readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity
Emission Limit: 20%
Authority for Requirement: DNR Construction Permit 00-A-638-S1
567 IAC 23.1(2)v
40 CFR 60 Subpart Y

Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit(s): 0.061 lb/hr
Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 00-A-638-S1
Pollutant: Particulate Matter (PM₁₀)
Emission Limit(s): 0.646 lb/hr
Authority for Requirement: DNR Construction Permit 00-A-638-S1

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.01 gr/dscf
Authority for Requirement: DNR Construction Permit 00-A-638-S1

**Operational Limits & Requirements**
*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**

A. The differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.
B. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 00-A-638-S1

**Reporting & Record Keeping:**
*The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.*

A. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
B. The owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.
C. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

Authority for Requirement: DNR Construction Permit 00-A-638-S1

**NSPS and NESHAP Requirements:**

These emission units are subject to the requirements of 40 CFR Part 60, Subpart Y, Standards of Performance for *Coal Preparation Plants* (IAC 23.1(2)“v”)) and *General Provisions*, Subpart A.

Authority for Requirement: DNR Construction Permit 00-A-638
The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard. 40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source. 40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere. 40 CFR 60.12

Authority for Requirement: 567 IAC 23.1(2)"v"
40 CFR 60 Subpart Y

**Emission Point Characteristics**
*The emission point shall conform to the specifications listed below.*

- Stack Height (feet from the ground): 130.25
- Stack Diameter (inches): 22
- Stack Exhaust Flow Rate (scfm): 8,357
- Stack Temperature (°F): 82
- Discharge Style: Vertical Unobstructed
- Authority for Requirement: DNR Construction Permit 00-A-638-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Stack Testing:**

Pollutant - PM  
Stack Test to be Completed by – November 2, 2017  
Test Method - 40 CFR 60, Appendix A, Method 5  
40 CFR 51, Appendix M, Method 202  
Authority for Requirement – 567 IAC 22.108(3)

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

**Opacity Monitoring**

The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

The emission point shall be observed to ensure that no visible emissions occur during the material handling operation of the unit. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required.

**Operational Limits & Requirements**

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Operating Limits:**

A. This emissions unit shall not operate more than 4000 hours in any rolling twelve-month period.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.

C. The owner or operator shall develop an operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

**Authority for Requirement:** Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015) DNR Construction Permit 93-A-283-S2

**Reporting & Record Keeping:**

The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain the following monthly records:
   i. the number of hours that the emissions unit operated; and
   ii. the rolling twelve-month total number of hours that the emissions unit operated.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.

D. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse and the dust suppression system.

The opacity standard shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.  40 CFR 60.11(c)

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.  40 CFR 60.11(d)

The permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere.  40 CFR 60.12

Authority for Requirement:  567 IAC 23.1(2)v
  40 CFR 60 Subpart Y

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground):  45
Stack Opening (inches, dia.): 25
Exhaust Temperature (°F):  Ambient
Exhaust Flowrate (scfm):  12,525
Discharge Style: Vents Inside
Authority for Requirement: DNR Construction Permit 93-A-283-S2

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Opacity Monitoring**

The facility shall check the opacity weekly during a period when the emission unit on this emission point is at or near full capacity and record the reading. Maintain a written record of the observation and any action resulting from the observation for a minimum of five years.

The emission point shall be observed to ensure that no visible emissions occur during the material handling operation of the unit. If visible emissions are observed corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If corrective action does not return the observation to no visible emissions, then a Method 9 observation will be required.

If an opacity > 20% is observed, this would be a violation and corrective action will be taken as soon as possible, but no later than eight hours from the observation of visible emissions. If weather conditions prevent the observer from conducting an opacity observation, the observer shall note such conditions on the data observation sheet. At least three attempts shall be made to retake opacity readings at approximately 2-hour intervals throughout the day. If all observation attempts for a week have been unsuccessful due to weather, an observation shall be made the next operating day where weather permits.

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)'c'

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the emissions unit is limited to operating between 8:00 AM and 4:00 PM.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the emissions unit shall be roofed and shall be permanently enclosed on the three sides that are not used by vehicles. The fourth side shall be equipped with drive-through plastic strips. The drive-through plastics strips shall be maintained in good condition and shall be replaced when they become warped or damaged or are otherwise not providing an effective enclosure.

C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the amount of limestone handled in this emissions unit shall be limited to 200 tons per hour.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-343

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when this emissions unit operated. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of the following: 1.) the amount of limestone handled, 2.) the number of hours that the emissions unit operated, and 3.) the average amount of limestone handled in tons per hour (#1/#2).

C. The owner or operator shall maintain records on the moisture content of the material handled in this emissions unit.

D. The PM$_{2.5}$ emission rate established in the Emission Limits section of this permit is based on the limited hourly capacity of the unit and following equation and parameters:

$$E = (k) \left(0.0032\right) \left(U/5\right)^{1.3} / \left(M/2\right)^{1.4}$$

Where:

- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 5.0 miles per hour, based on an enclosure that reduces the wind speed in the enclosure by 33%; and
- $M$ = minimum material moisture content, 0.7%, provided by applicant, based on AP-42, Table 13.2.4-1, average moisture content of crushed limestone

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**

A. The differential pressure drop across the baghouse shall be maintained between 2 and 10 inches water column while the equipment is in operation.

B. The owner or operator shall develop a operating and maintenance plan for the baghouse including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 80-A-202-S2

**Reporting & Record Keeping:**

*The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.*

A. The owner or operator shall properly operate and maintain equipment to periodically monitor the differential pressure drop across the baghouse. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.

B. The owner or operator shall collect and record the pressure drop across the baghouse, in inches of water, at least once per day. This requirement shall not apply on the days that the equipment is not in operation.

C. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the baghouse.

D. The owner or operator shall maintain the following monthly records:
   i. The amount of limestone processed in the emissions units (tons); and
   ii. The total amount of limestone processed in each calendar year (tons).

For tons of limestone processed, it is acceptable to record the amount of limestone received at the facility. This record keeping is required to document whether annual throughput of limestone has exceeded 10,000 and whether a stack test for PM\textsubscript{2.5} is required in accordance with the Monitoring Requirements section of this permit.

Authority for Requirement: Muscatine PM\textsubscript{2.5} SIP (79 FR 71025, December 1, 2014;
Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 115
Stack Opening (inches, dia.): 66 x 66
Exhaust Temperature (°F): 70
Exhaust Flow Rate (scfm): 11,818
Discharge Style: Horizontal
Authority for Requirement: DNR Construction Permit 80-A-202-S2

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Stack Testing:

Pollutant – Opacity
Stack Test to be Completed by – Stack testing for PM$_{2.5}$ and opacity shall be conducted if the annual throughput of limestone exceeds 10,000 tons. The test shall be started no later than 120 days after the month in which the throughput exceeded 10,000 tons. If the test cannot be started during the 120 day period due to the unit’s limited operating schedule, MPW may request an extension of an additional 60 days to begin the testing.
Test Method - 40 CFR 60, Appendix A, Method 9
Authority for Requirement: DNR Construction Permit 80-A-202-S2

Pollutant – Particulate Matter (PM$_{2.5}$)
Stack Test to be Completed by – Stack testing for PM$_{2.5}$ and opacity shall be conducted if the annual throughput of limestone exceeds 10,000 tons. The test shall be started no later than 120 days after the month in which the throughput exceeded 10,000 tons. If the test cannot be started during the 120 day period due to the unit’s limited operating schedule, MPW may request an extension of an additional 60 days to begin the testing.
Test Method - 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 80-A-202-S2
Pollutant - Particulate Matter (PM)
Stack Test to be Completed by – Stack testing for PM shall be conducted if the annual throughput of limestone exceeds 10,000 tons. The test shall be started no later than 120 days after the month in which the throughput exceeded 10,000 tons. If the test cannot be started during the 120 day period due to the unit’s limited operating schedule, MPW may request an extension of an additional 60 days to begin the testing.
Test Method - 40 CFR 60, Appendix A, Method 5
40 CFR 51, Appendix M, Method 202
Authority for Requirement – 567 IAC 22.108(3)

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

The emissions from this emission point shall not exceed the levels specified below.

For Emission Units 45 and 45A

Pollutant: Opacity
Emission Limit: 40%
Authority for Requirement: DNR Construction Permit 13-A-142
567 IAC 23.3(2)"d"

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"e"

For Emission Unit 45A Only

Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit: 0.0625 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-142
Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. The Limestone Truck Unloading operation (EU45A) is limited to operating between 6:00 AM and 4:00 PM.
B. The number of delivery trucks for unloading limestone is limited to six per day.
C. The amount of limestone that can be unloaded onto the storage pile is limited to 90 tons per day.
D. The amount of limestone that can be unloaded onto the storage pile is limited to 50 tons per hour.
E. The ground surface area of the limestone storage pile (EU45) shall not exceed 1 acre (43,560 square feet).
F. The operating limits specified above in A, B, C, D, and E shall go into effect starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-142

Reporting & Record Keeping:

The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the Limestone Truck Unloading (EU45A) operated. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner of operator shall maintain an hourly and daily record in tons on the amount of limestone loaded onto the storage pile.
C. The owner or operator shall maintain records on the moisture content and the silt content of the material handled in this emissions unit.
D. The owner or operator shall maintain records on the surface area of the limestone pile. By either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall submit to the Department its methodology for determining the size of the limestone pile. After the limestone pile is measured using its methodology, the owner or operator shall submit a report to the Department by November 1, 2013 indicating the size of the limestone pile. Thereafter, the limestone pile shall be measured semi-annually and information on the size of the limestone pile shall be submitted with the facility’s semi-annual reports.
E. For the Limestone Truck Unloading (EU45A), the PM$_{2.5}$ emissions rate established in Permit Condition 10 is based on the maximum capacity of the unit and the following equation and parameters:

$$E = (k) (0.0032) (U/5)^{1.3} / (M/2)^{1.4}$$

(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:

- $E =$ emission factor in lbs PM$_{2.5}$/ ton material
- $k =$ particle size multiplier, 0.053 for PM$_{2.5}$
- $U =$ mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M =$ minimum material moisture content, 0.7%, provided by applicant. 0.7% is the mean moisture content value listed in AP-42, Table 13.2.4-1 for crushed limestone.

Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
DNR Construction Permit 13-A-142

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 60

Associated Equipment

Associated Emission Unit ID Number: 60

Emission Unit vented through this Emission Point: 60
Emission Unit Description: Auxiliary Boiler
Raw Material/Fuel: Fuel Oil, Natural Gas, or Propane
Rated Capacity: 29.29 MMBtu/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40% opacity
Authority for Requirement: DNR Construction Permit 13-A-152-S1
567 IAC 23.3(2)"d"

(1) An exceedance of the indicator opacity of 10% will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter (PM$_{2.5}$)
Emission Limit(s): 0.567 lb/hr
Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-152-S1

Pollutant: Particulate Matter (PM$_{10}$)
Emission Limit(s): 0.720 lb/hr
Authority for Requirement: DNR Construction Permit 13-A-152-S1

Pollutant: Sulfur Dioxide (SO$_2$)
Emission Limit(s): 0.045 lb/hr
Authority for Requirement: DNR Construction Permit 13-A-152-S1
RACT

(2) The sulfur content of the distillate fuel oil combusted in this emission unit shall not exceed 15 ppm.
(3) The SO$_2$ limit is established to address the nonattainment designation for a portion of Muscatine County published in the Federal Register (78 FR 47191) on August 5, 2013. The nonattainment designation is for the 1-hour SO$_2$ primary national ambient air quality standard promulgated by EPA in 2010 (75 FR 35519, June 22, 2010). Compliance with this emission limit (sulfur content) shall be demonstrated through fuel sampling and/or fuel certification.
**LAER Emission Limits**

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.03 lb/MMBtu
Authority for Requirement: DNR Construction Permit 13-A-152-S1
567 IAC 31.20(1)"d"

Pollutant: Sulfur Dioxide (SO₂) – fuel oil
Emission Limit(s): 0.44 lbs/MMBtu
Authority for Requirement: DNR Construction Permit 13-A-152-S1
567 IAC 31.20(1)"d"

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**

A. This boiler is limited to burning natural gas or distillate fuel oil only. Propane (LP gas) may be used as a startup fuel when the boiler is to burn distillate fuel oil.

B. The maximum sulfur content of the fuel oil burned in this boiler shall not exceed 15 ppm (i.e., Ultra Low Sulfur Diesel).

Authority for Requirement: DNR Construction Permit 13-A-152-S1

**Reporting & Record keeping:**

*The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:*

A. The owner or operator shall perform an analysis and shall maintain records on the sulfur content of each shipment of oil received. Alternatively, the owner or operator shall have the oil supplier provide analyses on the sulfur content of the oil received. The analysis does not have to be for each shipment of oil received, but shall be documented by receipts from the fuel supplier, a statement from the fuel supplier on the specification of the sulfur content of the purchased oil, or other supporting documentation.

Authority for Requirement: DNR Construction Permit 13-A-152-S1

**NSPS and NESHAP Requirements**

This equipment is subject to the National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [40 CFR Part 63 Subpart DDDDD].

Authority for Requirement: 40 CFR Part 63 Subpart DDDDD
567 IAC 22.108(3)
**Emission Point Characteristics**
*This emission point shall conform to the conditions listed below.*

Stack Height (feet): 123  
Stack Diameter (inches): 27  
Stack Exhaust Flow Rate (scfm): 4,350  
Stack Temperature (°F): 365  
Discharge Style: Vertical Unobstructed  
Authority for Requirement: DNR Construction Permit 13-A-152-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**
*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Pollutant: Particulate Matter (PM)  
Emission Limits: 121 lb/hr, 530 tons/yr, 0.42 lb/MMBtu  
Authority for Requirement: DNR Construction Permit 74-A-175-S4

Pollutant: Sulfur Dioxide (SO$_2$)  
Emission Limits: 6.0 lb/MMBtu  
Authority for Requirement: DNR Construction Permit 74-A-175-S4  
567 IAC 23.3(3)"a"
Pollutant: Sulfur Dioxide (SO₂) – total
RACT Emission Limit: 1153 lb/hr (1)
Authority for Requirement: DNR Construction Permit 74-A-175-S4
567 IAC 23.3(3)"a"

(1) Shall be determined on a 21-day rolling average basis and includes startup, shutdown and malfunction emissions. This is a combined limit for EP 70, EP 80, and EP 90.

Emission Limits for Boilers 7 and 8 Combined

Pollutant: Sulfur Dioxide (SO₂)
Emission Limits: 2772 lb/hr (2), 12,141 tons/yr (3)
Authority for Requirement: DNR Construction Permit 74-A-175-S4

(2) The combined total emission of sulfur dioxide from boiler 7 and boiler 8 shall not exceed 2,772 pounds per hour, averaged over a 24-hour calendar day, as required in the agreement between Muscatine Power & Water, IDNR and the EPA (see IDNR letter of 3/13/95). Compliance with this emission limit shall be demonstrated using the calculation methods detailed in the Continuous Emissions Monitoring section condition D.
(3) Beginning March 15, 1996, the combined total emission of sulfur dioxide from Boiler 7 and Boiler 8 shall not exceed 12,141 tons per rolling 12-month period. Compliance with this emission limit shall be demonstrated using the calculation methods detailed in the Continuous Emissions Monitoring section condition D.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below:

Operating Limits:

A. This emissions unit shall be limited to firing on coal and natural gas.
B. Total emissions of sulfur dioxide from unit 7 and unit 8 shall not exceed 2,772 pounds per hour, averaged over a 24-hour calendar day. Compliance with this emission limit shall be demonstrated using the calculation methods detailed in the Continuous Emissions Monitoring section condition D.
C. The owner or operator shall develop an operating and maintenance plan for the multiclone, CE71, and the electrostatic precipitator, CE72, including a preventative maintenance schedule that is consistent with the manufacturer’s instructions for routine and long-term maintenance.
D. Total emissions of sulfur dioxide from Unit 7, Unit 8 and Unit 9 shall not exceed 1153 pounds per hour on a 21-day rolling average as calculated in the Reporting and Record Keeping section condition B.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 74-A-175-S4
Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner shall maintain a file of computations to show the total hourly emission rate of sulfur dioxide emissions from Unit 7 and Unit 8. The owner shall submit quarterly excess emission reports as specified in 567 IAC 25.1(6). Oral and written excess emission reporting shall be required as specified in Chapter 25 of the Iowa rules.

B. The owner or operator shall maintain a file of computations to show the total hourly emission level for SO₂. The owner or operator shall use the total hourly SO₂ emission rates to calculate and record the average SO₂ emission rate for each calendar day. Effective January 1, 2017, the owner or operator shall use the daily average SO₂ emission rates to demonstrate compliance with the 21-day rolling average as calculated below:

\[
SO₂ = 2.03*(\text{Unit 7}) + 0.84*(\text{Unit 8}) + 1.22*(\text{Unit 9})
\]

Where,

\[
SO₂ = \text{total emissions, in pounds per hour, of sulfur dioxide from Unit 7, Unit 8 and Unit 9}
\]
\[
\text{Unit 7} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 7}
\]
\[
\text{Unit 8} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 8}
\]
\[
\text{Unit 9} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 9}
\]

The owner or operator shall provide quarterly reports to the Department, no later than 30 calendar days following the end of the calendar quarter as specified in 567 IAC 25.1(6).

C. A log of all maintenance and inspection activities performed on the emission unit and control equipment. This log shall include, but is not limited to:
   i. The date and time any inspection and/or maintenance was performed on the emission unit and/or control equipment;
   ii. Any issues identified during the inspection and the date each issue was resolved;
   iii. Any issues addressed during the maintenance activities and the date each issue was resolved; and,
   iv. Identification of the staff person performing the maintenance or inspection.

Authority for Requirement: DNR Construction Permit 74-A-175-S4

NSPS and NESHAP Requirements

This equipment is subject to the National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [40 CFR Part 63 Subpart DDDDD].

Authority for Requirement: 40 CFR Part 63 Subpart DDDDD
567 IAC 22.108(3)
Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (feet): 220
Stack Diameter (inches): 106.3
Stack Exhaust Flow Rate (scfm): 65,000
Stack Temperature (°F): 350
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 74-A-175-S4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Stack Testing:

Pollutant – Particulate Matter (PM$_{2.5}$)
1st Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method - 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)

Pollutant – Particulate Matter (PM$_{10}$)
1st Stack Test to be Completed by – November 2, 2016
2nd Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method - 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)

Pollutant – Particulate Matter (PM) - State
Stack Test to be Completed – Once every 3 years (1)
Test Method - 40 CFR 60, Appendix A, Method 5
        40 CFR 51, Appendix M, Method 202
Authority for Requirement - DNR Construction Permit 74-A-175-S4

(1) In addition to the PM2.5 stack test required above, a stack test for PM$_{2.5}$ is required if the results of any PM test (as a 3 run average) ever exceeds 8.57 pounds per hour. The stack test for PM$_{2.5}$ shall be conducted within ninety (90) days after the report is received by the Iowa DNR showing the final results of the PM test.

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted
in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

Continuous Emissions Monitoring:

Pollutant - Opacity
Operational Specifications - 40 CFR Part 60
Initial System Calibration/Quality Assurance – July 2000
Ongoing System Calibration/Quality Assurance - 40 CFR Part 60
Reporting & Record keeping - 567 IAC 25. Submit all reports and petitions required by 567 IAC 25 to the Iowa DNR in order to demonstrate compliance with continuous emission monitoring and the 40% opacity (visible emissions) limit
Authority for Requirement - 567 IAC 25.1(1), 567 IAC 23.3(2)d", 567 IAC 22.108(4), and 567 IAC 22.108(15)

Pollutant - Sulfur Dioxide (SO2)
Operational Specifications – As found in 40 CFR Part 75
Ongoing System Calibration/Quality Assurance – As found in 40 CFR Part 75
Reporting & Record keeping – As found in 40 CFR Part 75. Submit all reports and petitions required by 40 CFR 75 to the Iowa DNR in order to demonstrate compliance with the 6 lb/MMBtu SO2 emission limit for boiler 7 alone and 2772 lb/hr SO2 emissions for boilers 7 and 8.
Authority for Requirement - Iowa DNR Construction Permit 74-A-175-S4 and EPA PSD Permit 80-E-001 dated 1/24/80 and revision 80-E-001-S dated 9/6/83

Other Parameters (For the calculation of SO2)
Pollutant - Other - Carbon Dioxide (CO2)
Operational Specifications – As found in 40 CFR Part 75
Ongoing System Calibration/Quality Assurance – As found in 40 CFR Part 75
Reporting & Record keeping – As found in 40 CFR Part 75. Submit all reports and petitions required by 40 CFR 75 to the Iowa DNR in order to demonstrate compliance with the 6 lb/MMBtu SO2 emission limit for boiler 7 alone and 2772 lb/hr SO2 emissions for boilers 7 and 8.
Authority for Requirement - Iowa DNR Construction Permit 74-A-175-S4 and EPA PSD Permit 80-E-001 dated 1/24/80 and revision 80-E-001-S dated 9/6/83

Pollutant - Other - Flow
Operational Specifications – As found in 40 CFR Part 75
Initial System Calibration/Quality Assurance – 11/29-12/14/95
Ongoing System Calibration/Quality Assurance – As found in 40 CFR Part 75
Reporting & Record keeping – As found in 40 CFR Part 75. Submit all reports and
petitions required by 40 CFR 75 to the Iowa DNR in order to demonstrate compliance with the 6 lb/MMBtu SO₂ emission limit for boiler 7 alone and 2772 lb/hr SO₂ emissions for boilers 7 and 8.

A. The owner or operator shall operate, maintain, and quality assure a continuous emission monitoring system (CEMS) for measuring emissions in the respective units (ppm, lb/hr, etc.) as required in the Emission Limitations section of this permit. The CEMS shall be operated during any period that any fuel is combusted in the boiler.

B. The following monitoring systems are required by this permit:

- **SO₂:**
  The owner or operator shall install, calibrate, maintain, and operate a continuous monitoring system (CEMS) and record the output of the system, for measuring sulfur dioxide (SO₂) emissions, as follows:

  (1) Install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring sulfur dioxide (SO₂) emissions discharged to the atmosphere, or

  (2) If the owner or operator has installed and certified a SO₂ CEMS according to the requirements of 40 CFR §75.21 and 40 CFR 75, Appendix B that CEMS may be used to meet the SO₂ monitoring requirements provided:

    (i) A CO₂ or O₂ continuous monitoring system is installed, calibrated, maintained and operated at the same location.

The CEMS data recorder output range shall include zero and a high-level value. The high-level value shall be chosen and recorded by the owner or operator. The CEMS design shall also allow the determination of calibration drift at the zero and high-level values. If this is not possible or practical, the design must allow these determinations to be conducted at a low-level value (zero to 20 percent of the high-level value) and at a value between 50 and 100 percent of the high-level value.

The CEMS shall be installed at an accessible location where the pollutant concentration or emission rate measurements are directly representative or can be corrected so as to be representative of the total emissions from the affected facility or at the measurement location cross section.

The owner or operator shall develop and implement a QC program. At a minimum, each QC program must include written procedures which describe in detail, complete, step-by-step procedures and operations for each of the following activities:

1. Calibration of CEMS.
2. Calibration drift determination and adjustment of CEMS.
3. Preventive maintenance of CEMS (including spare parts inventory).
4. Data recording, calculations, and reporting.
5. Accuracy audit procedures including sampling and analysis methods.
6. Program of corrective action for malfunctioning CEMS.
Whenever excessive inaccuracies occur for two consecutive quarters, the owner or operator shall revise the current written procedures or modify or replace the CEMS to correct the deficiency causing the excessive inaccuracies.

These written procedures must be kept on record and available for inspection by the enforcement agency.

The owner or operator shall periodically review the aggregate hourly emissions average and aggregate annual emissions data produced by the CEMS. If the review indicates that either may exceed the emission limitations found in the Emissions Limitation section, the owner or operator shall take steps to mitigate SO₂ emissions to, at, or below the applicable limitation.

The owner or operator shall maintain an on-site record of CEMS-related data for not less than two years from the origination. The record shall contain all hourly SO₂ and flow rate measurements, any missing data substitution, subsequent aggregate and averaging calculation, results of quality assurance and averaging calculations, results of quality assurance activities, and all performance test results. These records shall be made readily available for inspection by the IDNR, EPA, or any authorized agent of these agencies.

• O₂ or CO₂:

The owner or operator shall install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring the oxygen (O₂) or carbon dioxide (CO₂) content of the flue gases at each location where SO₂ emissions are monitored.

C. The CEMS required in condition B above for SO₂ and either O₂ or CO₂ shall be operated and the data recorded during all periods of operation including periods of startup, shutdown, malfunction or emergency conditions, except for CEMS breakdowns, repairs, calibration checks and zero and span adjustments.

D. Muscatine Power and Water shall use the following procedures to calculate the hourly SO₂ mass rate for Boilers 7 and 8.

1. When measurements of SO₂ concentration and flow rate are on a wet basis, use the following equation to compute hourly SO₂ mass emission rate (in lb/hr):

   \[ E_h = K \cdot C_h \cdot Q_h \]

   Where:
   \( E_h \) = Hourly SO₂ mass emission rate during unit operation, lb/hr.
   \( K = 1.660 \times 10^{-7} \) for SO₂, (lb/scf)/ppm.
   \( C_h \) = Hourly average SO₂ concentration during unit operation, stack moisture basis, ppm.
   \( Q_h \) = Hourly average volumetric flow rate during unit operation, stack moisture basis, scfh.

2. When measurements by the SO₂ pollutant concentration monitor are on a dry basis and the flow rate monitor measurements are on a wet basis, use the following equation to compute hourly SO₂ mass emission rate (in lb/hr):

   \[ E_h = K \cdot C_{hp} \cdot Q_{hs} \cdot [(100 - \%H_2O)/100] \]
Where:
\[ E_h = \text{Hourly SO}_2 \text{ mass emission rate during unit operation, lb/hr.} \]
\[ K = 1.660 \times 10^{-7} \text{ for SO}_2, (\text{lb/scf})/\text{ppm}. \]
\[ C_{hp} = \text{Hourly average SO}_2 \text{ concentration during unit operation, ppm (dry).} \]
\[ Q_{hs} = \text{Hourly average volumetric flow rate during unit operation, scfh as measured (wet).} \]
\[ \%H_2O = \text{Hourly average stack moisture content during unit operation, percent by volume.} \]

At the conclusion of each clock hour on a boiler operating day, Muscatine Power and Water shall calculate the aggregate daily emissions rate, summing all SO\textsubscript{2} emissions from boilers 7 and 8 for that day. Likewise, at the conclusion of each clock hour on a boiler operating day, Muscatine Power and Water shall calculate the aggregate average hourly emissions rate for Boilers 7 and 8, as the sum of all hourly emissions from Boilers 7 and 8 divided by the time elapsed on that day. Lastly, Muscatine Power and Water shall calculate aggregate annual emissions from Boilers 7 and 8, either as the sum of all hourly emissions or the sum of all daily emissions collected or substituted since January 1 of the current emissions year. For the purposes of this condition, a boiler operating day is any day in which any fuel is combusted in any of the affected boilers. A day shall be defined as the time between 12:01 AM and 12:00 midnight.

E. Muscatine Power and Water shall maintain an on-site record of CEMS-related data for not less than two years from the origination. The record shall contain all hourly SO\textsubscript{2} and flow rate measurements, any missing data substitution, subsequent aggregate and averaging calculation, results of quality assurance and averaging calculations, results of quality assurance activities, and all performance test results. These records shall be made readily available for inspection by the Iowa Department of Natural Resources, the Environmental Protection Agency, or any authorized agent of these agencies.

F. Muscatine Power and Water shall provide a written report of all exceedences of the aggregate hourly emissions average for Boilers 7 and 8 no later than 30-days following the end of each calendar quarter on forms provided by the Department. In addition, Muscatine Power and Water shall report the aggregate annual emissions for Boilers 7 and 8 in each quarterly report, summarizing the year-end totals in the fourth-quarter report.

G. The following data requirements shall apply to all CEMS for the SO\textsubscript{2} emission standards in this permit:

1. The CEMS required by this permit shall be operated and data recorded during all periods of operation of the emission unit except for CEM breakdowns and repairs. Data is recorded during calibration checks, and zero and span adjustments.
2. The 1-hour average SO\textsubscript{2} and CO\textsubscript{2} emission rates measured by the CEMS required by this permit shall be used to calculate compliance with the emission standards of this permit. At least 2 data points must be used to calculate each 1-hour average.
3. For each hour of missing emission data (SO\textsubscript{2} and CO\textsubscript{2}), the owner or operator shall substitute data by:
(i) If the monitor data availability is equal to or greater than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:
   (a) For the missing data period less than or equal to 24 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.
   (b) For a missing data period greater than 24 hours, substitute the greater of:
       • The 90th percentile hourly concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
       • The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(ii) If the monitor data availability is at least 90.0% but less than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:
   (a) For a missing data period of less than or equal to 8 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.
   (b) For the missing data period of more than 8 hours, substitute the greater of:
       • The 95th percentile hourly pollutant concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
       • The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(iii) If the monitor data availability is less than 90.0%, the owner or operator shall obtain actual emission data by an alternate testing or monitoring method approved by the Department.

H. Muscatine Power and Water shall develop and implement a quality assurance/quality control (QA/QC) program for the continuous emission monitoring systems. At a minimum, include in each QA/QC program a written plan that describes in detail (or that refers to separate documents containing) complete, step-by-step procedures and operations for preventative maintenance, calibration checks, relative accuracy test audits. Upon request from regulatory authorities, the source shall make all procedures, maintenance records, and ancillary supporting documentation from the manufacturer (e.g., software coefficients and troubleshooting diagrams) available for review during an audit. Electronic storage of the information in the QA/QC plan is permissible, provided that the information can be made available in hardcopy upon request during an audit. These activities generally include a daily calibration error, quarterly linearity test, and semi-annual or annual RATA.

I. If requested by the Department, the owner/operator shall coordinate the quarterly cylinder gas audits with the Department to afford the Department the opportunity to observe these audits. The relative accuracy test audits shall be coordinated with the Department.

Authority for Requirement: DNR Construction Permit 74-A-175-S4 and
The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required performance evaluation of a continuous emission monitor. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☒ No ☐

Authority for Requirement: 567 IAC 22.108(3)

Monitoring Guidelines

The facility makes a commitment to take timely corrective action during periods of excursion where the indicators are out of range. A corrective action may include an investigation of the reason for the excursion, evaluation of the situation and necessary follow-up action to return operation within the indicator range. An excursion is determined by the averaged discrete data point over a period of time. An excursion does not necessarily indicate a violation of an applicable requirement. If the corrective action measures fail to return the indicators to the appropriate range, the facility will report the exceedance to the department and conduct source testing within 90 days of the exceedance to demonstrate compliance with applicable requirements. If the test demonstrates compliance with emission limits then new indicator ranges must be set for monitoring and the new ranges must be incorporated in the operating permit. If the test demonstrates noncompliance with emission limits, then the facility, within 60 days, proposes a schedule to implement corrective action to bring the source into compliance and demonstrate compliance.

Monitoring Methods and Corrective Actions

Compliance Assurance Monitoring (CAM) Plan for CE71 Multi-Cyclone

I. Background

A. Emissions Unit:
   Identification: EP70/EU70
   Description: Unit 7 Traveling Grate Stoker Boiler
   Facility: Muscatine Power & Water, 1700 Dick Drake Way, Muscatine, Iowa 52761

B. Applicable Regulation, Emission Limit, and Monitoring Requirements:
Applicable regulation: Permit 74-A-175-S4
PM Emission Limit: 121 lb/hr, 530 tons/yr, 0.42 lb/MMBtu
PM$_{10}$ Emission Limit: 121 lb/hr
PM$_{2.5}$ Emission Limit: 8.57 lb/hr

C. **Current Monitoring Requirements:**
   Stack Testing
   Continuous Opacity Monitoring (COMS) ME70A
   Audible Precipitator “Malfunction” Alarm

D. **Current Technology:** Cyclonic Separator Dust Collector

II. Monitoring Approach

A. **Indicator:** Continuous monitoring of differential pressure alarms will be used as an indicator.

B. **Measurement Approach:** Differential pressure alarms are checked continuously to detect differential pressure of less than 1.0 inches or greater than 5.1 inches of water.

C. **Indicator Range:** An excursion is defined as a differential pressure of less than 1.0 inches or greater than 5.1 inches of water for an hourly average, except during periods of start-up, shutdown, and upset conditions.

D. **QIP (Quality Improvement Plan) Threshold:** The QIP threshold is six excursions in a one month period.

E. **Performance Criteria Data representativeness:** Differential pressure of less than 1.0 inches or greater than 5.1 inches water would indicate a decrease in the performance of either the cyclone separator or the dust collector and potentially indicate an increase of or particulate emissions.

   Verification of operational Differential pressure alarm records will be maintained for five years.

   QA/QC practices and criteria: The facility shall monitor the differential pressure alarm status when the system is in operation. If an hourly average differential pressure of less than 1.0 inches of water or a differential pressure greater than 5.1 inches of water is observed, corrective action will be taken within 8 hours, except when an alarm arises during periods of startup, shutdown, or upset conditions.
Monitoring frequency: Differential pressure alarms shall be monitored by the DCS when the emission unit is in operation.

**Compliance Assurance Monitoring (CAM) Plan for CE72 Electrostatic Precipitator**

**I. Background**

A. **Emissions Unit:**
   - Identification: EP70/EU70
   - Description: Unit 7 Traveling Grate Stoker Boiler
   - Facility: Muscatine Power & Water, 1700 Dick Drake Way, Muscatine, Iowa 52761

B. **Applicable Regulation, Emission Limit, and Monitoring Requirements:**
   - Applicable regulation: Permit 74-A-175-S4
   - PM Emission Limit: 121 lb/hr, 530 ton/yr, 0.42 lb/MMBtu
   - PM$_{10}$ Emission Limit: 121 lb/hr
   - PM$_{2.5}$ Emission Limit: 8.57 lb/hr

C. **Current Monitoring Requirements:**
   - Stack Testing
   - Continuous Opacity Monitoring (COMS) ME70A
   - Audible Precipitator “Malfunction” Alarm

D. **Current Technology:** Electrostatic Precipitator

**II. Monitoring Approach:**

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Opacity of ESP exhaust</th>
<th>Audible Precipitator “Malfunction” Alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measurement Approach</td>
<td>COMS in ESP exhaust</td>
<td>The audible and visual alarm continuously monitors T-R set failure and rapper control malfunction.</td>
</tr>
</tbody>
</table>

2. **Indicator Range**

   A CAM excursion will be defined as **opacity exceeding 30% over any 1-hour averaging period.** Except during startup, shutdown, or cleaning of control equipment as per 567 IAC 24.1(1). Corrective action will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand, after it is determined that the

   A CAM excursion will be defined as **Failure of two T-R sets or more than 25% of the rappers.** Corrective action measures will be implemented on the occurrence of a “Malfunction” alarm. The appropriate measures for remediation will be implemented within eight hours plus the period of time until generating capacity is available to meet customer demand.

   Random T-R set failure and rapper failure (up to one T-R set and 25% of the rappers per precipitator section)
opacity monitor is functioning properly. will not significantly affect precipitator performance.

3. Performance Criteria
   A. Data Representativeness
   COMS installed at a representative location in the ESP exhaust per 40 CFR 60, Appendix B, Performance Specification 1 (PS-1).
   Rapper system operation, T-R set operation and ash removal system operation are indicators of the proper electromechanical operation of the ESP. An audible alarm will continuously monitor T-R set failure and rapper control health.
   Daily inspection of the rapper system operation, T-R sets and ash removal system provide additional assurance of proper electromechanical operation of the ESP.

   B. Verification of Operational Status
   Results of initial COMS performance evaluation conducted per PS-1 (July 2000).
   Results of equipment verification tests conducted to calibrate the audible and visible alarm displays.

   C. QA/QC Practices/Criteria
   Installation and evaluation of the COMS per PS-1. The continuous opacity monitor is automatically calibrated for zero and span adjustments daily.
   All instruments and control equipment will be calibrated, maintained, and operated according to the manufactures specifications.

   D. Monitoring Frequency
   Monitor the opacity of the ESP exhaust continuously (every 10 seconds).
   An audible alarm will continuously (greater than four times per hour) monitor T-R set failure and rapper control malfunction.

   E. Data Collection Procedures
   Set up the data acquisition system (DAS) to retain all 6-minute average opacity data.
   Maintain records of T-R and rapper failures exceeding CAM thresholds for longer than one hour.

   F. Averaging period
   Use the 10-second opacity data to calculate 6-minute averages. Use the 6-minute averages to calculate hourly block average opacity for the CAM. N/A

III. Quality Improvement Plan (QIP):

A Quality Improvement Plan (QIP) will be required to be submitted to the IDNR if an accumulation of excursions of either the opacity indicator or the T-R and rapper alarms exceed 5 percent of the boiler’s normal operating time for a 6-month reporting period. All requirements in 40 CFR 64.8(b) shall be fulfilled if a QIP is required.
IV. **Quality Assurance and Quality Control:**

In addition to monitoring the opacity and T-R / rapper alarms, MP&W will conduct the following activities to assure compliance. The following monitoring is not required during periods of time greater than one day in which the source does not operate.

A. Monitor detection equipment, including alarm displays in the control room, which alert operators to irregular operating conditions such as high hopper levels, high opacity, and continuous opacity monitoring system (COMS) failure.

B. Conduct daily inspections of the ESP electromechanical operation:
   - Inspection of rapper operation
   - Inspection of T-R set operation including power usage level
   - Inspection of ash removal system operation

C. Each Major Scheduled Unit Outage (typically lasting four or more weeks):
   - Check and correct plate/electrode alignment
   - Inspect for collection surface fouling
   - Inspect T-R set mechanical condition
   - Inspect internal structural components
   - Evaluate and correct ash transport system wear areas

Corrective action to correct abnormal operating conditions will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand.

D. Record Keeping and Recording:
   - Records of all daily inspections and any actions resulting from these inspections will be kept for five years.
   - Records of all planned unit outage inspections and any actions resulting from these inspections will be kept for five years.
   - MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken. 40 CFR 64.9(a)(2)(i).
   - MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable). 40 CFR 64.9(a)(2)(ii).
   - All excursions and monitor downtime incidents will be reported in semi-annual monitoring reports and annual compliance certifications.

E. Quality Control:
   - All instruments and equipment will be calibrated, maintained, and operated according to the manufacturer’s specifications.
   - An inventory of spare parts will be maintained. Parts will be re-ordered as they are used.

Authority for requirement: 567 IAC 22.108(3)

**Emission Point ID Number: 80**

**Associated Equipment**

**Associated Emission Unit ID Number: 80**  
Emissions Control Equipment ID Numbers: CE80A, CE81, CE82  
Emissions Control Equipment Descriptions: Electrostatic Precipitator (ESP), Over-fired Air (OFA), Activated Carbon Injection  
Continuous Emissions Monitors ID Numbers: ME80A, ME81A, ME82A, ME83, ME84, and ME85

---

Emission Unit vented through this Emission Point: 80  
Emission Unit Description: Unit 8 Cyclone Boiler  
Raw Material/Fuel: Bituminous Coal, Subbituminous Coal, or Natural Gas  
Waste Solvent (330 gal/month for combustion)  
Diesel Oil and/or Waste Oil (Occasionally for short periods to facilitate slag tapping or coal combustion)  
Rated Capacity: 890 MMBtu/hr Coal or Natural Gas

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**  
*The emissions from this emission point shall not exceed the levels specified below.*

- **Pollutant:** Opacity  
  Emission Limits: 40%  
  Authority for Requirement:  DNR Construction Permit 95-A-373-P4  
  567 IAC 23.3(2)"d"

- **Pollutant:** Particulate Matter (PM$_{2.5}$)  
  Emission Limits: 37.57 lb/hr  
  Authority for Requirement:  Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014;  
  as amended by 80 FR 18133, April 3, 2015)  
  DNR Construction Permit 95-A-373-P4

- **Pollutant:** Particulate Matter (PM$_{10}$)  
  Emission Limits: 266.9 lb/hr  
  Authority for Requirement:  DNR Construction Permit 95-A-373-P4

- **Pollutant:** Particulate Matter (PM)  
  Emission Limits: 267 lb/hr, 1169 tons/yr, 0.30 lb/MMBtu  
  Authority for Requirement:  DNR Construction Permit 95-A-373-P4

- **Pollutant:** Sulfur Dioxide (SO$_2$)  
  Emission Limits: 6.0 lb/MMBtu  
  Authority for Requirement:  DNR Construction Permit 95-A-373-P4
Pollutant: Sulfur Dioxide (SO₂) - total
RACT Emission Limit: 1153 lb/hr (1)
Authority for Requirement: DNR Construction Permit 95-A-373-P4

(1) Shall be determined on a 21-day rolling average basis and includes startup, shutdown and malfunction emissions. This is a combined limit for EP70, EP80, and EP90.

Pollutant: Nitrogen Oxides (NOₓ)
Emission Limits: 3352.45 tons/yr, 0.86 lb/MMBtu (2)
Authority for Requirement: DNR Construction Permit 95-A-373-P4

(2) As requested to remain an insignificant increase for PSD and to meet Acid Rain requirements in 40 CFR 76.6. Standard is a twelve month rolling average, and includes startup, shutdown and malfunctions.

Pollutant: Carbon Monoxide (CO)
Emission Limits: 432.4 lb/hr
Authority for Requirement: DNR Construction Permit 95-A-373-P4

Emission Limits for Boilers 7 and 8 Combined

Pollutant: Sulfur Dioxide (SO₂)
Emission Limits: 2772 lb/hr (3), 12,141 tons/yr
Authority for Requirement: DNR Construction Permit 95-A-373-P4

(3) Averaged over a 24-hour calendar day.

BACT Emission Limit

Pollutant: Carbon Monoxide (CO)
BACT Emission Limits: 960 tons/yr (4), 250 ppm (5)
Authority for Requirement: DNR Construction Permit 95-A-373-P4

(4) Standard is a twelve month rolling average, and includes startup, shutdown and malfunctions.
(5) Standard is averaged over a calendar day, and does not include startup, shutdown and malfunction.

Acid Rain Limits

Pollutant: Sulfur Dioxide (SO₂)
Emission Limits: Sulfur Dioxide Allowances
Authority for Requirement: 567 IAC 22.108(7) (See attached Phase II Permit in appendix)
Pollutant: Nitrogen Oxides (NOₓ)
Emission Limits: See attached Phase II Acid Rain Permit
Authority for Requirement: 567 IAC 22.125(4) (Attached Phase II Acid Rain Permit)
40 CFR 76.7(a)(1)

Cross-State Air Pollution Rule (CSAPR) (aka Transport Rule (TR)) Limit

Pollutant: Nitrogen Oxides (NOₓ) Annual, Nitrogen Oxides (NOX) Ozone Season, Sulfur Dioxide (SO₂) Group 1
Emission Limits: Nitrogen Oxides and Sulfur Dioxide Allowance
Authority for Requirement: 40 CFR Part 97 (See Appendix B for requirements)

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below:

Operating Limits:

A. No person shall allow, cause or permit the combustion of number 1 or number 2 diesel fuel exceeding a sulfur content of 0.5 percent by weight.

Authority for Requirement: 567 IAC 23.3(3)"b"(1)

A. Total emissions of sulfur dioxide from unit 7 and unit 8 shall not exceed 2,772 pounds per hour, averaged over a 24-hour calendar day. Compliance with this emission limit shall be demonstrated using the calculation methods detailed in the Continuous Emission Monitoring section condition D.
B. The owner or operator shall develop an operating and maintenance plan for the electrostatic precipitator, CE80A, including a preventative maintenance schedule that is consistent with the manufacturer’s instructions for routine and long-term maintenance.
C. The owner or operator shall combust coal and/or natural gas in this unit. Diesel oil and/or waste oil may be combusted in this unit for short periods of time to facilitate coal combustion and/or slag tapping.
D. Total emissions of sulfur dioxide from Unit 7, Unit 8 and Unit 9 shall not exceed 1153 pounds per hour on a 21-day rolling average as calculated in the Reporting and Record keeping section condition C.
E. The owner or operator shall develop an operating and maintenance plan for the Activated Carbon Injection System (CE82), including a preventative maintenance schedule that is consistent with the manufacturer’s instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 95-A-373-P4
Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

1. The combined SO₂ emissions in pounds per hour from boilers 7 and 8 averaged over a 24-hour calendar day.
2. The combined SO₂ emissions in tons per calendar year from boilers 7 and 8.
3. The facility shall monitor the percent of sulfur by weight in the diesel fuel as delivered. The documentation may be vendor supplied or facility generated.

Authority for Requirement: 567 IAC 22.108(3)

A. The owner or operator shall monitor emissions from this unit and calculate the annual emissions, in tons per year on a calendar-year basis, for a period of five years following resumption of regular operations after the change made in project 07-355. This information shall be retained by the owner or operator for a period of ten years after project 07-355 is completed (IAC 567 33.3(18)“f”(4) & 33.3(18) “f”(5)).

B. The owner or operator shall make the information required to be documented and maintained pursuant to 567 IAC 33.3(18)“f” for project 07-355 available for review upon request for inspection by the Department or the general public pursuant to the requirements for Title V operating permits contained in 567 IAC 22.107(6).

C. The owner or operator shall maintain a file of computations to show the total hourly emission level for SO₂. The owner or operator shall use the total hourly SO₂ emission rates to calculate and record the average SO₂ emission rate for each calendar day. Effective January 1, 2017, the owner or operator shall use the daily average SO₂ emission rates to demonstrate compliance with the 21-day rolling average as calculated below:

\[
SO₂ = 2.03*(\text{Unit 7}) + 0.84*(\text{Unit 8}) + 1.22*(\text{Unit 9})
\]

Where,

\[
SO₂ = \text{total emissions, in pounds per hour, of sulfur dioxide from Unit 7, Unit 8 and Unit 9}
\]
\[
\text{Unit 7} = 24\text{-hour average sulfur dioxide emission rate, lb/hr, for Unit 7}
\]
\[
\text{Unit 8} = 24\text{-hour average sulfur dioxide emission rate, lb/hr, for Unit 8}
\]
\[
\text{Unit 9} = 24\text{-hour average sulfur dioxide emission rate, lb/hr, for Unit 9}
\]

D. The owner or operator shall provide quarterly reports to the Department, no later than 30 calendar days following the end of the calendar quarter as specified in 567 IAC 25.1(6).

E. The owner or operator shall record the amount of diesel oil and/or used oil used on a monthly basis.

F. Using the data collected and recorded by the NOx CEMs, the owner or operator shall record monthly:
   i. NOx emissions from the boiler (tons); and,
   ii. the rolling 12-month total of NOx emissions from the boiler (tons).

G. The owner or operator shall maintain a log of all maintenance and inspection activities performed on the emission unit and control equipment. This log shall include, but is not limited to:
i. The date and time any inspection and/or maintenance was performed on the emission unit and/or control equipment;

ii. Any issues identified during the inspection and the date each issue was resolved;

iii. Any issues addressed during the maintenance activities and the date each issue was resolved; and,

iv. Identification of the staff person performing the maintenance or inspection.

Authority for Requirement: DNR Construction Permit 995-A-373-P4

NSPS and NESHAP Requirements

This equipment is subject to the National Emission Standards for Hazardous Air Pollutants: *Coal- and Oil-Fired Electric Utility Steam Generating Units* (MATS) [40 CFR Part 63, Subpart UUUUU].

Authority for Requirement: 40 CFR Part 63 Subpart UUUUU

This unit is considered an affected source under 40 CFR 72, 73, 75, 76, 77 and 78 definitions. Therefore, this emission unit is subject to the applicable provisions of the Acid Rain Program.

Authority for Requirement: DNR Construction Permit 95-A-373-P4

40 CFR Parts 72, 73, 75, 76, 77, 78

**Emission Point Characteristics**

*This emission point shall conform to the conditions listed below.*

Stack Height (ft, from the ground): 225
Stack Diameter (inches, dia.): 102.4
Stack Exhaust Flow Rate (scfm): 229,000
Stack Temperature (°F): 350
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 95-A-373-P4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Stack Testing:

Pollutant – Particulate Matter (PM\textsubscript{2.5})
1st Stack Test to be Completed by – November 2, 2016
2nd Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method - 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)

Pollutant – Particulate Matter (PM\textsubscript{10})
1st Stack Test to be Completed by – November 2, 2016
2nd Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method - 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)

Pollutant – Particulate Matter (PM) - State
Stack Test to be Completed – Once every 3 years \(^{(1)}\)\(^{(2)}\)
Test Method - 40 CFR 60, Appendix A, Method 5
40 CFR 51, Appendix M, Method 202
Authority for Requirement - DNR Construction Permit 95-A-373-P4

\(^{(1)}\) Testing required by the Title V Operating Permit can be used to satisfy this requirement.
\(^{(2)}\) In addition to the PM\textsubscript{2.5} stack test required above, a stack test for PM\textsubscript{2.5} is required if the results of any PM test (as a 3 run average) ever exceeds 37.57 pounds per hour. The test stack for PM\textsubscript{2.5} shall be conducted within ninety (90) days after the report is received by the Iowa DNR showing the final results of the PM test.

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. \(^{567 \text{ IAC 25.1}(7)}\)

Continuous Emissions Monitoring:

A. The owner or operator shall operate, maintain, and quality assure a continuous emission monitoring system (CEMS) for measuring emissions in the respective units (ppm, lb/hr, etc.) as required in the Emission Limitations section of this permit. The CEMS shall be operated during any period that any fuel is combusted in the boiler.

B. The following monitoring systems are required by this permit:

- **Opacity:**
  The owner or operator shall install, calibrate, maintain, and operate a continuous emission monitoring system (CEMS) and record the output of the system, for measuring the opacity of emissions discharged to the atmosphere.
The owner or operator shall purchase an opacity monitor that complies with ASTM D 6216-98 and obtain a certificate of conformance from the opacity monitor manufacturer. The owner or operator shall install the opacity monitor at a location where the opacity measurements are representative of the total emissions from the affected facility. The facility must meet this requirement by choosing a measurement location and a light beam path as follows:

(i) **Measurement Location.** Select a measurement location that is (1) at least 4 duct diameters downstream from all particulate control equipment or flow disturbance, (2) at least 2 duct diameters upstream of a flow disturbance, (3) where condensed water vapor is not present, and (4) accessible in order to permit maintenance.

(ii) **Light Beam Path.** Select a light beam path that passes through the centroidal area of the stack or duct. Also, the facility must follow the additional requirements or modifications for the measurement locations listed in the table below:

<table>
<thead>
<tr>
<th>If your measurement location is in a:</th>
<th>And is:</th>
<th>Then use a light beam path that is:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Straight vertical section of stack or duct</td>
<td>Less than 4 equivalent diameters downstream from a bend</td>
<td>In the plane defined by the upstream bend</td>
</tr>
<tr>
<td>2. Straight vertical section of stack or duct</td>
<td>Less than 4 equivalent diameters upstream from a bend</td>
<td>In the plane defined by the downstream bend</td>
</tr>
<tr>
<td>3. Straight vertical section of stack or duct</td>
<td>Less than 4 equivalent diameters downstream and is also less than 1 diameter upstream from a bend</td>
<td>In the plane defined by the upstream bend</td>
</tr>
<tr>
<td>4. Horizontal section of stack or duct</td>
<td>At least 4 equivalent diameters downstream from a vertical bend</td>
<td>In the horizontal plane that is between 1/3 and 1/2 the distance up the vertical axis from the bottom of the duct</td>
</tr>
<tr>
<td>5. Horizontal section of duct</td>
<td>Less than 4 equivalent diameters downstream from a vertical bend</td>
<td>In the horizontal plane that is between 1/2 and 2/3 the distance up the vertical axis from the bottom of the duct for upward flow in the vertical section, and is between 1/3 and 1/2 the distance up the vertical axis from the bottom of the duct for downward flow</td>
</tr>
</tbody>
</table>

**SO₂:**

The owner or operator shall install, calibrate, maintain, and operate a continuous monitoring system (CEMS) and record the output of the system, for measuring sulfur dioxide (SO₂) emissions, as follows:

(1) Install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring sulfur dioxide (SO₂) emissions discharged to the atmosphere, or
(2) If the owner or operator has installed and certified a SO₂ CEMS according to the
requirements of 40 CFR §75.21 and 40 CFR 75, Appendix B that CEMS may be used
to meet the SO₂ monitoring requirements provided:
   a. A CO₂ or O₂ continuous monitoring system is installed, calibrated, maintained
      and operated at the same location.

The CEMS data recorder output range shall include zero and a high-level value. The
high-level value shall be chosen and recorded by the owner or operator. The CEMS
design shall also allow the determination of calibration drift at the zero and high-level
values. If this is not possible or practical, the design must allow these determinations to be
conducted at a low-level value (zero to 20 percent of the high-level value) and at a value
between 50 and 100 percent of the high-level value.

The CEMS shall be installed at an accessible location where the pollutant concentration or
emission rate measurements are directly representative or can be corrected so as to be
representative of the total emissions from the affected facility or at the measurement
location cross section.

The owner or operator shall develop and implement a QC program. At a minimum, each
QC program must include written procedures which describe in detail, complete, step-by-
step procedures and operations for each of the following activities:

1. Calibration of CEMS.
2. Calibration drift determination and adjustment of CEMS.
3. Preventive maintenance of CEMS (including spare parts inventory).
4. Data recording, calculations, and reporting.
5. Accuracy audit procedures including sampling and analysis methods.
6. Program of corrective action for malfunctioning CEMS.

Whenever excessive inaccuracies occur for two consecutive quarters, the owner or
operator shall revise the current written procedures or modify or replace the CEMS to
correct the deficiency causing the excessive inaccuracies.

These written procedures must be kept on record and available for inspection by the
enforcement agency.

The owner or operator shall periodically review the aggregate hourly emissions average
and aggregate annual emissions data produced by the CEMS. If the review indicates that
either may exceed the emission limitations found in the Emission Limitations section, the
owner or operator shall take steps to mitigate SO₂ emissions to, at, or below the applicable
limitation.

The owner or operator shall maintain an on-site record of CEMS-related data for not less
than two years from the origination. The record shall contain all hourly SO₂ and flow rate
measurements, any missing data substitution, subsequent aggregate and averaging
calculation, results of quality assurance and averaging calculations, results of quality
assurance activities, and all performance test results. These records shall be made readily
available for inspection by the IDNR, EPA, or any authorized agent of these agencies.
• **NOx:**

The owner or operator shall either:

(1) Install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring nitrogen oxides (NO\textsubscript{x}) emissions discharged to the atmosphere or

(2) If the owner or operator has installed a NO\textsubscript{x} emission rate CEMS to meet the requirements of 40 CFR 75 and is continuing to meet the ongoing requirements of 40 CFR 75, that CEMS may be used to meet this requirement.

The CEMS data recorder output range shall include zero and a high-level value. The high-level value shall be chosen and recorded by the owner or operator. The CEMS design shall also allow the determination of calibration drift at the zero and high-level values. If this is not possible or practical, the design must allow these determinations to be conducted at a low-level value (zero to 20 percent of the high-level value) and at a value between 50 and 100 percent of the high-level value.

The CEMS shall be installed at an accessible location where the pollutant concentration or emission rate measurements are directly representative or can be corrected so as to be representative of the total emissions from the affected facility or at the measurement location cross section.

The owner or operator shall develop and implement a QC program. At a minimum, each QC program must include written procedures which describe in detail, complete, step-by-step procedures and operations for each of the following activities:

1. Calibration of CEMS.
2. Calibration drift determination and adjustment of CEMS.
3. Preventive maintenance of CEMS (including spare parts inventory).
4. Data recording, calculations, and reporting.
5. Accuracy audit procedures including sampling and analysis methods.
6. Program of corrective action for malfunctioning CEMS.

Whenever excessive inaccuracies occur for two consecutive quarters, the owner or operator shall revise the current written procedures or modify or replace the CEMS to correct the deficiency causing the excessive inaccuracies.

These written procedures must be kept on record and available for inspection by the enforcement agency.

• **CO:**

Compliance with the carbon monoxide (CO) emission limits of this permit shall be continuously demonstrated by the owner or operator through the use of a CEMS. Therefore, the owner or operator shall install, calibrate, maintain, and operate a CEMS for measuring CO emissions discharged to the atmosphere and record the output of the system.
The CEMS data recorder output range shall include zero and a high-level value. The high-level value shall be chosen and recorded by the owner or operator. The CEMS shall be capable of measuring emission levels under normal conditions and under periods of short-duration peaks of high concentrations.

The owner or operator shall develop and implement a QC program. At a minimum, each QC program must include written procedures which describe in detail, complete, step-by-step procedures and operations for each of the following activities:

1. Calibration of CEMS.
2. Calibration drift determination and adjustment of CEMS.
3. Preventive maintenance of CEMS (including spare parts inventory).
4. Data recording, calculations, and reporting.
5. Accuracy audit procedures including sampling and analysis methods.
6. Program of corrective action for malfunctioning CEMS.

Whenever excessive inaccuracies occur for two consecutive quarters, the owner or operator shall revise the current written procedures or modify or replace the CEMS to correct the deficiency causing the excessive inaccuracies.

These written procedures must be kept on record and available for inspection by the enforcement agency.

- \( O_2 \) or \( CO_2 \):

The owner or operator shall install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring the oxygen (\( O_2 \)) or carbon dioxide (\( CO_2 \)) content of the flue gases at each location where \( SO_2 \) emissions are monitored.

C. The CEMS required in condition B above for \( SO_2 \), NOx and either \( O_2 \) or \( CO_2 \) shall be operated and the data recorded during all periods of operation including periods of startup, shutdown, malfunction or emergency conditions, except for CEMS breakdowns, repairs, calibration checks and zero and span adjustments.

D. Muscatine Power and Water shall use the following procedures to calculate the hourly \( SO_2 \) mass rate for Boilers 7 and 8.

(1) When measurements of \( SO_2 \) concentration and flow rate are on a wet basis, use the following equation to compute hourly \( SO_2 \) mass emission rate (in lb/hr):

\[
E_h = K * C_h * Q_h
\]

Where:

- \( E_h \) = Hourly \( SO_2 \) mass emission rate during unit operation, lb/hr.
- \( K = 1.660 \times 10^{-7} \) for \( SO_2 \), (lb/scf)/ppm.
- \( C_h \) = Hourly average \( SO_2 \) concentration during unit operation, stack moisture basis, ppm.
- \( Q_h \) = Hourly average volumetric flow rate during unit operation, stack moisture basis, scfh.
(2) When measurements by the SO2 pollutant concentration monitor are on a dry basis and the flow rate monitor measurements are on a wet basis, use the following equation to compute hourly SO2 mass emission rate (in lb/hr):

\[ E_h = K \times C_{hp} \times Q_{hs} \times \frac{(100 - \%H_2O)}{100} \]

Where:
- \( E_h \) = Hourly SO2 mass emission rate during unit operation, lb/hr.
- \( K = 1.660 \times 10^{-7} \) for SO2, (lb/scf)/ppm.
- \( C_{hp} \) = Hourly average SO2 concentration during unit operation, ppm (dry).
- \( Q_{hs} \) = Hourly average volumetric flow rate during unit operation, scfh as measured (wet).
- \( \%H_2O \) = Hourly average stack moisture content during unit operation, percent by volume.

At the conclusion of each clock hour on a boiler operating day, Muscatine Power and Water shall calculate the aggregate daily emissions rate, summing all SO2 emissions from boilers 7 and 8 for that day. Likewise, at the conclusion of each clock hour on a boiler operating day, Muscatine Power and Water shall calculate the aggregate average hourly emissions rate for Boilers 7 and 8, as the sum of all hourly emissions from Boilers 7 and 8 divided by the time elapsed on that day. Lastly, Muscatine Power and Water shall calculate aggregate annual emissions from Boilers 7 and 8, either as the sum of all hourly emissions or the sum of all daily emissions collected or substituted since January 1 of the current emissions year. For the purposes of this condition, a boiler operating day is any day in which any fuel is combusted in any of the affected boilers. A day shall be defined as the time between 12:01 AM and 12:00 midnight.

E. Muscatine Power and Water shall maintain an on-site record of CEMS-related data for not less than two years from the origination. The record shall contain all hourly SO2 and flow rate measurements, any missing data substitution, subsequent aggregate and averaging calculation, results of quality assurance and averaging calculations, results of quality assurance activities, and all performance test results. These records shall be made readily available for inspection by the Iowa Department of Natural Resources, the Environmental Protection Agency, or any authorized agent of these agencies.

F. Muscatine Power and Water shall provide a written report of all exceedences of the aggregate hourly emissions average for Boilers 7 and 8 no later than 30-days following the end of each calendar quarter on forms provided by the Department. In addition, Muscatine Power and Water shall report the aggregate annual emissions for Boilers 7 and 8 in each quarterly report, summarizing the year-end totals in the fourth-quarter report.

G. The following data requirements shall apply to all CEMS for the emission standards in this permit:

(1) The CEMS required by this permit shall be operated and data recorded during all periods of operation of the emission unit except for CEM breakdowns and repairs. Data is recorded during calibration checks, and zero and span adjustments.
(2) The 1-hour average SO₂, NOₓ, CO, and CO₂ emission rates measured by the CEMS required by this permit shall be used to calculate compliance with the emission standards of this permit. At least 2 data points must be used to calculate each 1-hour average.

(3) For each hour of missing emission data (NOₓ, SO₂, CO, and CO₂), the owner or operator shall substitute data by:

For SO₂, CO and CO₂:
(i) If the monitor data availability is equal to or greater than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For the missing data period less than or equal to 24 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(b) For a missing data period greater than 24 hours, substitute the greater of:
   - The 90th percentile hourly concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
   - The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(ii) If the monitor data availability is at least 90.0% but less than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For a missing data period of less than or equal to 8 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(b) For the missing data period of more than 8 hours, substitute the greater of:
   - The 95th percentile hourly pollutant concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
   - The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(iii) If the monitor data availability is less than 90.0%, the owner or operator shall obtain actual emission data by an alternate testing or monitoring method approved by the Department.

For NOₓ:
(i) If the monitor data availability is equal to or greater than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For a missing data period of less than or equal to 24 hours, substitute, as applicable, for each missing hour, the arithmetic average recorded by the
(b) For a missing data period greater than 24 hours, substitute the greater of:
- The 90th percentile hourly concentration recorded by a pollutant concentration
  monitor during the previous 2160 quality-assured monitor operating hours at the
  corresponding unit load range or operational bin; or
- The average of the hourly concentrations recorded by a pollutant
  concentration monitor for the hour before and the hour after the missing data
  period.

(ii) If the monitor data availability is at least 90.0% but less than 95.0%, the owner or
operator shall calculate substitute data by means of the automated data acquisition
and handling system for each hour of each missing data period according to the
following procedures:
(a) For a missing data period of less than or equal to 8 hours substitute, as applicable,
the arithmetic average hourly emission rate recorded by a monitoring system
during the previous 2160 quality-assured monitor operating hours at the
 corresponding unit load range or operational bin.
(b) For the missing data period of more than 8 hours, substitute the greater of:
- The 95th percentile hourly pollutant concentration recorded by a pollutant
  concentration monitor during the previous 2160 quality-assured monitor
  operating hours; or
- The average of the hourly concentrations recorded by a pollutant
  concentration monitor for the hour before and the hour after the missing data
  period.

(iii) If the monitor data availability is less than 90.0%, the owner or operator shall obtain
actual emission data by an alternate testing or monitoring method approved by the
Department.

H. If requested by the Department, the owner/operator shall coordinate the quarterly cylinder
gas audits with the Department to afford the Department the opportunity to observe these
audits. The relative accuracy test audits shall be coordinated with the Department.

Authority for Requirement: DNR Construction Permit 95-A-373-P4

The owner of this equipment or the owner’s authorized agent shall provide written notice to the
Director, not less than 30 days before a required performance evaluation of a continuous
emission monitor. Results of the test shall be submitted in writing to the Director in the form of a
comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

Agency Approved Operation & Maintenance Plan Required? Yes ☐ No ☒

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☒

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☒ No ☐

Authority for Requirement: 567 IAC 22.108(3)
Monitoring Guidelines

The facility makes a commitment to take timely corrective action during periods of excursion where the indicators are out of range. A corrective action may include an investigation of the reason for the excursion, evaluation of the situation and necessary follow-up action to return operation within the indicator range. An excursion is determined by the averaged discrete data point over a period of time. An excursion does not necessarily indicate a violation of an applicable requirement. If the corrective action measures fail to return the indicators to the appropriate range, the facility will report the exceedance to the department and conduct source testing within 90 days of the exceedance to demonstrate compliance with applicable requirements. If the test demonstrates compliance with emission limits then new indicator ranges must be set for monitoring and the new ranges must be incorporated in the operating permit. If the test demonstrates noncompliance with emission limits, then the facility, within 60 days, proposes a schedule to implement corrective action to bring the source into compliance and demonstrate compliance.
Monitoring Methods and Corrective Actions

Compliance Assurance Monitoring (CAM) Plan for CE80A Electrostatic Precipitator

I. Background

A. Emissions Unit:
   Identification: EP80/EU80
   Description: Unit 8 Cyclone Boiler
   Facility: Muscatine Power & Water, 1700 Dick Drake Way, Muscatine, Iowa 52761

B. Applicable Regulation, Emission Limit, and Monitoring Requirements:
   Applicable regulation: DNR Construction Permit 95-A-373-P4
   PM Emission Limit: 267 lb/hr, 1,169 tons/yr, 0.30 lb/MMBtu
   PM\textsubscript{10} Emission Limits: 266.9 lb/hr

C. Current Monitoring Requirements:
   Stack Testing
   Continuous Opacity Monitoring (COMS) ME80A
   Audible Precipitator various “Malfunction” Alarms

D. Current Technology: Electrostatic Precipitator

II. Monitoring Approach:

<table>
<thead>
<tr>
<th>1. Indicator</th>
<th>Opacity of ESP exhaust</th>
<th>Audible Precipitator “Malfunction” Alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measurement Approach</td>
<td>COMS in ESP exhaust</td>
<td>The audible and visual alarm continuously monitors T-R set failure and rapper control malfunction.</td>
</tr>
</tbody>
</table>

2. Indicator Range

- A CAM excursion will be defined as *opacity exceeding 25% over any 1-hour averaging period*. Except during startup, shutdown, or cleaning of control equipment as per 567 IAC 24.1(1). Corrective action will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand, after it is

- A CAM excursion will be defined as **Failure of three T-R sets or more than 32 of the rappers**. Corrective action measures will be implemented on the occurrence of a “Malfunction” alarm. The appropriate measures for remediation will be implemented within eight hours plus the period of time until generating capacity is available to meet customer demand.

- Random T-R set failure and rapper failure (up to two T-R set and 31 of the rappers)
determined that the opacity monitor is functioning properly. will not significantly affect precipitator performance.

3. Performance Criteria
   A. Data Representativeness
      COMS installed at a representative location in the ESP exhaust per 40 CFR 60, Appendix B, Performance Specification 1 (PS-1).
      Rapper system operation, T-R set operation and ash removal system operation are indicators of the proper electromechanical operation of the ESP.
      An audible alarm will continuously monitor T-R set failure and rapper control health.
      Daily inspection of the rapper system operation, T-R sets and ash removal system provide additional assurance of proper electromechanical operation of the ESP.

   B. Verification of Operational Status
      Results of initial COMS performance evaluation conducted per PS-1 (July 2000).
      Results of equipment verification tests conducted to calibrate the audible and visible alarm displays.

   C. QA/QC Practices/Criteria
      Installation and evaluation of the COMS per PS-1. The continuous opacity monitor is automatically calibrated for zero and span adjustments daily.
      All instruments and control equipment will be calibrated, maintained, and operated according to the manufactures specifications.

   D. Monitoring Frequency
      Monitor the opacity of the ESP exhaust continuously (every 10 seconds).
      An audible alarm will continuously (greater than four times per hour) monitor T-R set failure and rapper control malfunction.

   E. Data Collection Procedures
      Set up the data acquisition system (DAS) to retain all 6-minute average opacity data.
      Maintain records of T-R and rapper failures exceeding CAM thresholds for longer than one hour.

   F. Averaging period
      Use the 10-second opacity data to calculate 6-minute averages. Use the 6-minute averages to calculate hourly block average opacity for the CAM.
      N/A

III. Quality Improvement Plan (QIP):

A Quality Improvement Plan (QIP) will be required to be submitted to the IDNR if an accumulation of excursions of either the opacity indicator or the T-R and rapper alarms exceed 5 percent of the boiler’s normal operating time for a 6-month reporting period. All requirements in 40 CFR 64.8(b) shall be fulfilled if a QIP is required.
IV. **Quality Assurance and Quality Control:**

In addition to monitoring the opacity and T-R / rapper alarms, MP&W will conduct the following activities to assure compliance. The following monitoring is not required during periods of time greater than one day in which the source does not operate.

A. Monitor detection equipment, including alarm displays in the control room, which alert operators to irregular operating conditions such as high hopper levels, high opacity, and continuous opacity monitoring system (COMS) failure.

B. Conduct daily inspections of the ESP electromechanical operation:
   - Inspection of rapper operation
   - Inspection of T-R set operation including power usage level
   - Inspection of ash removal system operation

C. Each Major Scheduled Unit Outage (typically lasting four or more weeks):
   - Check and correct plate/electrode alignment
   - Inspect for collection surface fouling
   - Inspect T-R set mechanical condition
   - Inspect internal structural components
   - Evaluate and correct ash transport system wear areas

Corrective action to correct abnormal operating conditions will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand.

D. Record Keeping and Recording:
   - Records of all daily inspections and any actions resulting from these inspections will be kept for five years.
   - Records of all planned unit outage inspections and any actions resulting from these inspections will be kept for five years.
   - MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken. 40 CFR 64.9(a)(2)(i).
   - MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable). 40 CFR 64.9(a)(2)(ii).
   - All excursions and monitor downtime incidents will be reported in semi-annual monitoring reports and annual compliance certifications.

E. Quality Control:
   - All instruments and equipment will be calibrated, maintained, and operated according to the manufacturer’s specifications.
   - An inventory of spare parts will be maintained. Parts will be re-ordered as they are used.

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)

The emissions from each emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 40% (1)

(1) An exceedence of the indicator opacity of (10%) will required the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedence. If exceedences continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter (PM_{2.5})
Emission Limit(s): 0.0092 lb/hr

Pollutant: Particulate Matter (PM_{10})
Emission Limit(s): 0.085 lb/hr
Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.085 lb/hr; 0.1 gr/dscf
567 IAC 23.3(2)"a"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below:

A. The owner or operator shall develop a operating and maintenance plan for the Bin Vent Filter (CE88, CE98) including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the Bin Vent Filter (CE88, CE98).

Emission Point Characteristics
Each emission point shall conform to the specifications listed below.

Pollutant: Opacity
Emission Limits: 20%\(^{(1)}\)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
567 IAC 23.1(2)"z"
40 CFR 60 Subpart Da

\(^{(1)}\) Except for one 6-minute period per hour of not greater than 27% opacity. Standard is a 6-minute average.

Pollutant: Particulate Matter (PM\(_{2.5}\))
Emission Limits: 43.59 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 80-A-191-P4

Pollutant: Particulate Matter (PM\(_{10}\))
Emission Limits: 46.68 lb/hr
Authority for Requirement: DNR Construction Permit 80-A-191-P4
Pollutant: Federal Particulate Matter (PM)
Emission Limits: 0.03 lb/MMBtu (2)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
   567 IAC 23.1(2)"z"
   40 CFR 60 Subpart Da
   EPA PSD Permit 80-E-001 dated 1/24/80, and revision
   80-E-001-S dated 9/6/83

(2) Standard also requires 1% potential combustion concentration (99% reduction) when combusting solid fuel, and 30% potential combustion concentration (70% reduction) when combusting liquid fuel (40 CFR 60.42Da(a)). Compliance with the 0.03 lb/MMBtu standard constitutes compliance with the percent reduction requirements (40 CFR 60.48Da(a)). This standard applies at all times except during periods of startup, shutdown or malfunction (40 CFR 60.48Da(c)).

Pollutant: Sulfur Dioxide (SO2)
Emission Limits: 70% reduction (3)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
   40 FR 60 Subpart Da

(3) When combusting solid or solid-derived fuels, 30% of the potential combustion concentration (70% reduction). When combusting liquid or gaseous fuels, 0.8 lb/MMBtu and 10% of the potential combustion concentration, or 100% of the potential combustion concentration (zero percent reduction) when emissions are less than 0.20 lb/MMBtu. If different fuels are combusted simultaneously, the applicable standard is determined by proration using the formula set forth in 40 CFR 60.43Da(h)(2). Standard is a 30-day rolling average, (40 CFR 60.43Da(g)). After the initial performance test, compliance with the SO2 emission limitations and percentage reduction requirements under 60.43Da is based on the average emission rate for 30 successive boiler operating days. A separate performance tests is completed at the end of each boiler operating day after the initial performance test, and a new 30 day average emission rate for SO2 and a new percent reduction for SO2 are calculated to show compliance with the standards (40 CFR 60.48Da(e)). Compliance shall be demonstrated by following the procedures in 40 CFR 60.48Da(g) and (h)).

Pollutant: Sulfur Dioxide (SO2) - total
RACT Emission Limit: 1153 lb/hr (4)
Authority for Requirement: DNR Construction Permit 80-A-191-P4

(4) Shall be determined on a 21-day rolling average basis and includes startup, shutdown and malfunction emissions. This is a combined limit for EP 70, EP 80, and EP 90.

Pollutant: Nitrogen Oxides (NOx)
Emission Limits: 0.60 lb/MMBtu (5), 65% reduction (6), 0.235 lb/MMBtu (7)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
   40 CFR 60 Subpart Da

(5) For bituminous coal. Limit for subbituminous coal is 0.50 lb/MMBtu, limit for oil is 0.30 lb/MMBtu, limit for gas is 0.20 lb/MMBtu, and for other fuel types, or if two or more fuels are combusted simultaneously, the NOx BACT limit shall be the limit specified in 40 CFR 60.44Da(a) and/or as determined by the proration procedures specified in 40 CFR 60.44a(c). Standard is a 30-day rolling average. This standard applies at all times except during periods of startup, shutdown or malfunction (40 CFR 60.48Da(c)). After the initial performance test, compliance with the NOx emission limitations under 60.44Da is based on the average emission rate for 30 successive boiler operating days. A separate
performance tests is completed at the end of each boiler operating day after the initial performance test, and a new 30 day average emission rate for NOx are calculated to show compliance with the standards (40 CFR 60.48Da(e)). Compliance shall be demonstrated by following the procedures in 40 CFR 60.48Da(g) and (h)).

(6) For solid fuels. For liquid fuels, standard is a 30% reduction of potential combustion concentration. Compliance with the lb/MMBtu standard constitutes compliance with the percent reduction requirements (40 CFR 60.48a(b)).

(7) As requested to remain an insignificant increase for PSD and to meet Acid Rain requirements in 40 CFR 76.6. Standard is a twelve month rolling average, and includes startup, shutdown and malfunctions.

Pollutant: Carbon Monoxide (CO)
Emission Limits: 329.2 lb/hr
Authority for Requirement: DNR Construction Permit 80-A-191-P4

BACT/LAER Limits

Pollutant: Particulate Matter (PM)
Emission Limits: 0.03 lb/MMBtu
Authority for Requirement: DNR Construction Permit 80-A-191-P4
EPA PSD Permit 80-E-001 dated 01/24/80, and revision
80-E-001-S dated 9/6/83
567 IAC 31.20(1)"d"

Pollutant: Nitrogen Oxides (NOx)
Emission Limits: 0.6 lb/MMBtu (1)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
EPA PSD Permit 80-E-011 dated 01/24/80, and revision
80-E-001-S dated 9/6/83

(1) For bituminous coal. BACT NOx limits are the NOx emissions specified in NSPS Subpart Da, so limit for subbituminous coal is 0.50 lb/MMBtu, limit for oil is 0.30 lb/MMBtu, limit for gas is 0.20 lb/MMBtu, and for other fuel types, or if two or more fuels are combusted simultaneously, the NOx BACT limit shall be the limit specified in 40 CFR 60.44a(a) and/or as determined by the proration procedures specified in 40 CFR 60.44a(c). Reference EPA permit 80-E-001 of January 24, 1980. Standard is a 30-day rolling average.

Pollutant: Sulfur Dioxide (SO2)
Emission Limits: 0.56 lb/MMBtu (2), 0.45 lb/MMBtu (3), 92% reduction (4)
Authority for Requirement: DNR Construction Permit 80-A-191-P4
EPA PSD permit 80-E-001 dated 1/24/80, revision
80-E-001-S dated 9/6/83
567 IAC 31.20(1)"d"

(2) 24 hour calendar day average
(3) 0.45 lb/MMBtu 30 day rolling average
(4) 30-day rolling average for the flue gas desulfurization system

Pollutant: Carbon Monoxide (CO)
Emission Limits: 720 tons/yr (5), 100 ppm (6)
Authority for Requirement: DNR Construction Permit 80-A-191-P4

(5) Standard is a 12-month rolling total, and includes startup, shutdown, and malfunctions.

(6) Standard is averaged over a calendar day, and does not include startup, shutdown and malfunction.

**Acid Rain Limits**

Pollutant: Sulfur Dioxide (SO₂)
Emission Limits: Sulfur Dioxide Allowances
Authority for Requirement: 567 IAC 22.108(7) (See attached Phase II Permit in appendix)

Pollutant: Nitrogen Oxides (NOₓ)
Emission Limits: See attached Phase II Acid Rain Permit
Authority for Requirement: 567 IAC 22.125(4) (Attached Phase II Acid Rain Permit)
40 CFR 76.7(a)(1)

Pollutant: Nitrogen Oxides (NOₓ)
Emission Limits: 0.40 lb/MMBtu
Standard is an annual average.
Authority for Requirement: 40 CFR 76 (a)(1) Acid Rain Program

**Cross-State Air Pollution Rule (aka Transport Rule (TR)) Limit**

Pollutant: Nitrogen Oxides (NOₓ) Annual, Nitrogen Oxides (NOX) Ozone Season, Sulfur Dioxide (SO₂) Group 1
Emission Limits: Nitrogen Oxides and Sulfur Dioxide Allowance
Authority for Requirement: 40 CFR Part 97 (See Appendix B for requirements)

**Operational Limits & Requirements**

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

**Operating Limits:**

A. This emissions unit shall be limited to firing on coal and fuel oil.
B. The owner or operator shall develop an operating and maintenance plan for the scrubbers, CE93 & CE94, the electrostatic precipitators, CE91 & CE92, and the activated carbon injection system (CE96) including a preventative maintenance schedule that is consistent with the manufacturer’s instructions for routine and long-term maintenance.
C. Total emissions of sulfur dioxide from Unit 7, Unit 8 and Unit 9 shall not exceed 1153 pounds per hour on a 21-day rolling average as calculated in the Reporting and Record Keeping section condition C.

Authority for Requirement: DNR Construction Permit 80-A-191-P4
Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall monitor emissions from this unit and calculate the annual emissions, in tons per year on a calendar-year basis, for a period of five years following resumption of regular operations after the change made in Project 07-355. This information shall be retained by the owner or operator for a period of ten years after Project 07-355 was completed (IAC 567 33.3(18)“f”(4) & 33.3(18) “f”(5)).

B. The owner or operator shall make the information required to be documented and maintained pursuant to IAC 567-33.3(18)“f” available for review upon request for inspection by the Department or the general public pursuant to the requirements for Title V operating permits contained in 567-22.107(6).

C. The owner or operator shall maintain a file of computations to show the total hourly emission level for SO₂. The owner or operator shall use the total hourly SO₂ emission rates to calculate and record the average SO₂ emission rate for each calendar day. Effective January 1, 2017, the owner or operator shall use the daily average SO₂ emission rates to demonstrate compliance with the 21-day rolling average as calculated below:

\[ \text{SO}_2 = 2.03\ast \text{Unit 7} + 0.84\ast \text{Unit 8} + 1.22\ast \text{Unit 9} \]

Where,

\[ \text{SO}_2 = \text{total emissions, in pounds per hour, of sulfur dioxide from Unit 7, Unit 8 and Unit 9} \]
\[ \text{Unit 7} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 7} \]
\[ \text{Unit 8} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 8} \]
\[ \text{Unit 9} = \text{24-hour average sulfur dioxide emission rate, lb/hr, for Unit 9} \]

The owner or operator shall provide quarterly reports to the Department, no later than 30 calendar days following the end of the calendar quarter as specified in 567 IAC 25.1(6).

D. The owner or operator shall maintain a log of all maintenance and inspection activities performed on the emission unit and control equipment. This log shall include, but is not limited to:

i. The date and time any inspection and/or maintenance was performed on the emission unit and/or control equipment;

ii. Any issues identified during the inspection and the date each issue was resolved;

iii. Any issues addressed during the maintenance activities and the date each issue was resolved; and,

iv. Identification of the staff person performing the maintenance or inspection.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 80-A-191-P4
NSPS and NESHAP Requirements:

This unit is subject to the NSPS standard Subpart Da, Standards of Performance for Electric Utility Steam Generating Unit for which Construction is Commenced After September 18, 1978.

This unit is considered an affected source under 40 CFR 72, 73, 75, 76, 77 and 78 definitions. Therefore, this emission unit is subject to the applicable provisions of the Acid Rain Program.

Authority for Requirement: DNR Construction Permit 80-A-191-P4

This equipment is subject to the National Emission Standards for Hazardous Air Pollutants: Coal- and Oil-Fired Electric Utility Steam Generating Units (MATS) [40 CFR Part 63, Subpart UUUUU].

Authority for Requirement: 40 CFR Part 63 Subpart UUUUU

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 300
Stack Opening (inches, dia.): 126
Exhaust Temperature (°F): 180
Exhaust Flowrate (scfm): 430,625
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 80-A-191-P4

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Stack Testing:

Pollutant – Particulate Matter (PM$_{2.5}$)
1st Stack Test to be Completed by – November 2, 2016
2nd Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method – 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)
Pollutant – Particulate Matter (PM\textsubscript{10})
1st Stack Test to be Completed by – November 2, 2016
2nd Stack Test to be Completed between – May 2, 2018 and May 2, 2019
Test Method – 40 CFR 51, Appendix M, 201A with 202
Authority for Requirement - 567 IAC 22.108(3)

Pollutant – Particulate Matter (PM) - State
Stack Test to be Completed – Once every 3 years
Test Method – 40 CFR 60, Appendix A, Method 5
40 CFR 51, Appendix M, Method 202
Authority for Requirement: DNR Construction Permit 80-A-191-P4

(1) Testing required by the Title V Operating Permit can be used to satisfy this requirement.
(2) Stack test for PM\textsubscript{2.5} is required if the results of any PM test (as a 3 run average) ever exceeds 43.59 pounds per hour. The test stack for PM\textsubscript{2.5} shall be conducted within ninety (90) days after the report is received by the Iowa DNR showing the final results of the PM test.

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required stack test. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

Continuous Emissions Monitoring:

A. The owner or operator shall operate, maintain, and quality assure a continuous emission monitoring system (CEMS) for measuring emissions in the respective units (ppm, lb/hr, etc.) as required in the Emission Limitations section. The CEMS shall be operated during any period that any fuel is combusted in the boiler.

B. The following monitoring systems are required by this permit:

- **Opacity:**
  In accordance with 40 CFR §60.49Da(a), the owner or operator shall install, calibrate, maintain, and operate a continuous emission monitoring system (CEMS) and record the output of the system, for measuring the opacity of emissions discharged to the atmosphere.

  If opacity interference due to water droplets exists in the stack (for example, from the use of an FGD system), the opacity is monitored upstream of the interference (at the inlet to the FGD system). If opacity interference is experienced at all locations (both at the inlet and outlet of the sulfur dioxide control system), alternate parameters indicative of the particulate matter control system's performance are monitored (subject to the approval of the Administrator).

  The system shall be designed to meet the requirements of 40 CFR Part 60, Appendix B, Performance Specification 1 (PS1).

- **SO\textsubscript{2}:**
  In accordance with 40 CFR §60.49Da(b), the owner or operator shall install, calibrate, maintain, and operate a continuous monitoring system (CEMS) and record the output of the system, for measuring sulfur dioxide (SO\textsubscript{2}) emissions, as follows:
(1) Install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring sulfur dioxide (SO₂) emissions discharged to the atmosphere, or

(2) If the owner or operator has installed and certified a SO₂ CEMS according to the requirements of 40 CFR §75.21 and 40 CFR 75, Appendix B that CEMS may be used to meet the SO₂ monitoring requirements provided:

(ii) A CO₂ or O₂ continuous monitoring system is installed, calibrated, maintained and operated at the same location in accordance with 40 CFR §60.49Da(d); and,

(iii) For sources subject to an SO₂ emission limit in lb/MMBtu under §60.43Da:

(a) When relative accuracy testing is conducted, the SO₂ concentration data and the CO₂ (or O₂) data are collected simultaneously; and,

(b) In addition to meeting the applicable SO₂ and CO₂ (or O₂) relative accuracy specifications in Figure 2 of 40 CFR 75 Appendix B, the relative accuracy (RA) standard in 40 CFR 60, Appendix B, Performance Specification 2 (PS2), Section 13.2 is met when the RA is calculated on a lb/MMBtu basis; and,

(iv) The reporting requirements of 40 CFR §60.51Da are met. The SO₂ and CO₂ (or O₂) data reported to meet the requirements of 40 CFR §60.51Da shall not include substitute data values derived from the missing data procedures in 40 CFR 75, Subpart D nor shall the SO₂ data have been bias adjusted according to the procedures of 40 CFR 75.

The system shall be designed to meet the 40 CFR 60, Appendix B, Performance Specification 2 (PS2) and Performance Specification 6 (PS6) requirements. The specifications of 40 CFR 60, Appendix F (Quality Assurance/Quality Control) shall apply.

The owner or operator shall periodically review the aggregate hourly emissions average and aggregate annual emissions data produced by the CEMS. If the review indicates that either may exceed the emission limitations found in Condition 10, the owner or operator shall take steps to mitigate SO₂ emissions to, at, or below the applicable limitation.

The owner or operator shall maintain an on-site record of CEMS-related data for not less than two years from the origination. The record shall contain all hourly SO₂ and flow rate measurements, any missing data substitution, subsequent aggregate and averaging calculation, results of quality assurance and averaging calculations, results of quality assurance activities, and all performance test results. These records shall be made readily available for inspection by the IDNR, EPA, or any authorized agent of these agencies.

This monitor shall also be used to demonstrate compliance with the non-NSPS emission standards in this permit

- NOₓ:

In accordance with 40 CFR §60.49Da(c), the owner or operator shall either:

(1) Install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring nitrogen oxides (NOₓ) emissions discharged to the atmosphere or

(2) If the owner or operator has installed a NOₓ emission rate CEMS to meet the requirements of 40 CFR 75 and is continuing to meet the ongoing requirements of 40 CFR 75, that CEMS may be used to meet the requirements of 40 CFR §60.49Da(c), except that the owner or operator shall also meet the requirements of 40 CFR §60.51Da.
Data reported to meet the requirements of 40 CFR §60.51Da shall not include data substituted using the missing data procedures in 40 CFR 75, Subpart D nor shall the data have been bias adjusted according to the procedures of 40 CFR 75.

The system shall be designed to meet the 40 CFR 60, Appendix B, Performance Specification 2 (PS2) and Performance Specification 6 (PS6) requirements. The specifications of 40 CFR Appendix F (Quality Assurance/Quality Control) shall apply.

This monitor shall also be used to demonstrate compliance with the non-NSPS emission standards in this permit.

- **CO**:

  Compliance with the carbon monoxide (CO) emission limits of this permit shall be continuously demonstrated by the owner or operator through the use of a CEMS. Therefore, the owner or operator shall install, calibrate, maintain, and operate a CEMS for measuring CO emissions discharged to the atmosphere and record the output of the system.

  The system shall be designed to meet the 40 CFR 60, Appendix B, Performance Specification 4A (PS4A) and Performance Specification 6 (PS6) requirements. The specifications of 40 CFR 60, Appendix F (Quality Assurance/Quality Control) shall apply.

- **O₂ or CO₂**:

  In accordance with 40 CFR §60.49Da, the owner or operator shall install, calibrate, maintain, and operate a CEMS and record the output of the system, for measuring the oxygen (O₂) or carbon dioxide (CO₂) content of the flue gases at each location where SO₂ or NOx emissions are monitored.

- **Flowmeter**:

  Per 40 CFR §60.49Da(l), the owner or operator demonstrating compliance with the output-based standard under 40 CFR §60.42Da, 40 CFR §60.43Da, 40 CFR §60.44Da, or 40 CFR §60.45Da shall install, certify, operate, and maintain a continuous flow monitoring system meeting the requirements of 40 CFR 60, Appendix B, Performance Specification 6 and 40 CFR 60, Appendix F, Procedure 1. In addition, the owner or operator shall record the output of the system, for measuring the volumetric flow of exhaust gases discharged to the atmosphere, or

  Alternatively, data from a continuous flow monitoring system certified according to the requirements of 40 CFR §75.20(c) and 40 CFR 75, Appendix A, and continuing to meet the applicable quality control and quality assurance requirements of 40 CFR §75.21 and 40 CFR 75, Appendix B, may be used.

C. The CEMS required in the Continuous Emissions Monitoring section condition B for SO₂, NOx and either O₂ or CO₂ shall be operated and the data recorded during all periods of operation including periods of startup, shutdown, malfunction or emergency conditions, except for CEMS breakdowns, repairs, calibration checks and zero and span adjustments.

D. In accordance with 40 CFR §60.49Da(f)(1), the owner or operator shall obtain emission data for at least 18 hours in at least 22 out of 30 successive boiler operating days. If this minimum data cannot be met with a CEMS, the owner or operator shall supplement the emission data
with monitoring systems approved by the Administrator (40 CFR Part 60 approved reference methods and procedures are listed below):

1. 40 CFR 60, Method 6 shall be used to determine the SO₂ concentration at the same location as the SO₂ monitor. Samples shall be taken at 60-minute intervals. The sampling time and sample volume for each sample shall be at least 20 minutes and 0.020 dscm (0.71 dscf). Each sample represents a 1-hour average.

2. 40 CFR 60, Method 7 shall be used to determine the NOₓ concentration at the same location as the NOₓ monitor. Samples shall be taken at 30-minute intervals. The arithmetic average of two consecutive samples represents a 1-hour average.

3. The emission rate correction factor, integrated bag sampling and analysis procedure of 40 CFR 60, Appendix A, Method 3B shall be used to determine the O₂ or CO₂ concentration at the same location as the O₂ or CO₂ monitor. Samples shall be taken for at least 30 minutes in each hour. Each sample represents a 1-hour average.

4. The procedures in 40 CFR 60, Appendix A, Method 19 shall be used to compute each 1-hour average concentration in ng/J (1b/million Btu) heat input.

Acceptable alternative methods and procedures are given in condition F below.

E. Per 40 CFR §60.49Da(i), the owner or operator shall use the following methods and procedures to conduct monitoring system performance evaluations under 40 CFR §60.13(c) and calibration checks under 40 CFR §60.13(d):

1. Methods 3B, 6, and 7 shall be used to determine O₂, SO₂, and NOₓ concentrations, respectively.

2. SO₂ or NOₓ (NO), as applicable, shall be used for preparing the calibration gas mixtures (in N₂, as applicable) under 40 CFR 60, Appendix B, Performance Specification 2.

3. The span value for a continuous monitoring system for measuring opacity is between 60 and 80 percent.

4. The span value for a continuous monitoring system measuring NOₓ shall be:

   i. 1,000 ppm; or

   ii. the owner or operator of an affected facility may elect to use the NOₓ span values determined according to Section 2.1.2 in Appendix A to 40 CFR Part 75.

5. The span value of the sulfur dioxide continuous monitoring system at the inlet to the sulfur dioxide control device is 125 percent of the maximum estimated hourly potential emissions of the fuel fired, and the outlet of the sulfur dioxide control device is 50 percent of maximum estimated hourly potential emissions of the fuel fired. Should the facility opt to determine span values for NOx under the Continuous Emissions Monitoring section condition E.4.ii, SO₂ span values shall be determined according to Section 2.1.1 in Appendix A to 40 CFR Part 75.

6. The facility may elect to implement the following alternative data accuracy assessment procedures. For all required CO₂ and O₂ CEMS and for SO₂ and NOₓ CEMS with span values greater than 30 ppm, quarterly linearity checks may be performed in accordance with Section 2.2.1 of Appendix B to 40 CFR Part 75, instead of performing the cylinder gas audits (CGAs) described in Procedure 1, Section 5.1.2 of Appendix F to 40 CFR Part 60. If this option is selected: The frequency of the linearity checks shall be as specified in Section 2.2.1 of Appendix B to 40 CFR Part 75; the applicable linearity specifications in Section 3.2 of Appendix A to 40 CFR Part 75 shall be met; the data validation and out-of-control criteria in Section 2.2.3 of Appendix B to 40 CFR Part 75 shall be followed instead
of the excessive audit inaccuracy and out-of-control criteria in Procedure 1, Section 5.2 of Appendix F to 40 CFR Part 60; and the grace period provisions in Section 2.2.4 of Appendix B to 40 CFR Part 75 shall apply. For the purposes of data validation under this subpart, the cylinder gas audits described in Procedure 1, Section 5.1.2 of Appendix F to 40 CFR Part 60 shall be performed for SO2 and NOx span values less than or equal to 30 ppm.

F. The owner or operator may use the following as alternatives to the reference methods and procedures specified:
1. For 40 CFR 60, Appendix A: 40 CFR 60, Appendix A, Method 6, Method 6A or Method 6B (whenever 40 CFR 60, Appendix A, Method 6 and Method 3 or Method 3B data are used) or 40 CFR 60, Appendix A, Method 6C may be used. Each Method 6B sample obtained over 24 hours represents 24 1-hour averages. If either 40 CFR 60, Appendix A, Method 6A or 40 CFR 60, Appendix A, Method 6B is used under 40 CFR §60.49Da(i), the conditions under 40 CFR §60.49Da(d)(1) apply. These conditions do not apply under 40 CFR §60.49Da(h).
2. For 40 CFR 60, Appendix A: 40 CFR 60, Appendix A, Method 7, Method 7A, 7C, 7D, or 7E may be used. If Method 7C, 7D, or 7E is used, the sampling time for each run shall be 1 hour.
3. For 40 CFR 60, Appendix A, Method 3: 40 CFR 60, Appendix A, Method 3A or 3B may be used if the sampling time is 1 hour.
4. For 40 CFR 60, Appendix A, Method 3B: 40 CFR 60, Appendix A, Method 3A may be used.

G. The following data requirements shall apply to all CEMS for non-NSPS emission standards in this permit:
(1) The CEMS required by this permit shall be operated and data recorded during all periods of operation of the emission unit except for CEM breakdowns and repairs. Data is recorded during calibration checks, and zero and span adjustments.
(2) The 1-hour average SO2, NOx, CO, and CO2 emission rates measured by the CEMS required by this permit shall be used to calculate compliance with the emission standards of this permit. At least 2 data points must be used to calculate each 1-hour average.
(3) For each hour of missing emission data (NOx, SO2, CO, and CO2), the owner or operator shall substitute data by:

For SO2, CO and CO2:
(i) If the monitor data availability is equal to or greater than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:
(a) For the missing data period less than or equal to 24 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.
(b) For a missing data period greater than 24 hours, substitute the greater of:
   • The 90th percentile hourly concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
   • The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.
(ii) If the monitor data availability is at least 90.0% but less than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For a missing data period of less than or equal to 8 hours, substitute the average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(b) For the missing data period of more than 8 hours, substitute the greater of:
   - The 95th percentile hourly pollutant concentration recorded by a pollutant concentration monitor during the previous 720 quality-assured monitor operating hours; or
   - The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(iii) If the monitor data availability is less than 90.0%, the owner or operator shall obtain actual emission data by an alternate testing or monitoring method approved by the Department.

For NOx:

(i) If the monitor data availability is equal to or greater than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For a missing data period of less than or equal to 24 hours, substitute, as applicable, for each missing hour, the arithmetic average recorded by the monitoring system during the previous 2160 quality assured monitor operating hours at the corresponding unit load range or operational bin.

(b) For a missing data period greater than 24 hours, substitute the greater of:
   - The 90th percentile hourly concentration recorded by a pollutant concentration monitor during the previous 2160 quality-assured monitor operating hours at the corresponding unit load range or operational bin; or
   - The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.

(ii) If the monitor data availability is at least 90.0% but less than 95.0%, the owner or operator shall calculate substitute data by means of the automated data acquisition and handling system for each hour of each missing data period according to the following procedures:

(a) For a missing data period of less than or equal to 8 hours substitute, as applicable, the arithmetic average hourly emission rate recorded by a monitoring system during the previous 2160 quality-assured monitor operating hours at the corresponding unit load range or operational bin.

(b) For the missing data period of more than 8 hours, substitute the greater of:
   - The 95th percentile hourly pollutant concentration recorded by a pollutant concentration monitor during the previous 2160 quality-assured monitor operating hours; or
   - The average of the hourly concentrations recorded by a pollutant concentration monitor for the hour before and the hour after the missing data period.
(iii) If the monitor data availability is less than 90.0%, the owner or operator shall obtain actual emission data by an alternate testing or monitoring method approved by the Department.

H. If requested by the Department, the owner/operator shall coordinate the quarterly cylinder gas audits with the Department to afford the Department the opportunity to observe these audits. The relative accuracy test audits shall be coordinated with the Department.

Authority for Requirement: DNR Construction Permit 80-A-191-P4
EPA PSD Permit 80-E-001 dated 1/24/80, and revision 80-E-001-S dated 9/6/83

The owner of this equipment or the owner’s authorized agent shall provide written notice to the Director, not less than 30 days before a required performance evaluation of a continuous emission monitor. Results of the test shall be submitted in writing to the Director in the form of a comprehensive report within 6 weeks of the completion of the testing. 567 IAC 25.1(7)

Agency Approved Operation & Maintenance Plans Required? Yes ☐ No ☑

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☑

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☑ No ☐

Authority for Requirement: 567 IAC 22.108(3)
Electrostatic Precipitator

Compliance Assurance Monitoring Plan

Facility: Muscatine Power and Water
EIQ Number: 92-3726
Emission Unit: EU 90, Tangentially Fired Boiler
Emission Point: EP 90, Boiler Stack
Control Equipment: CE91 and CE92

Monitoring Guidelines

The facility makes a commitment to take timely corrective action during periods of excursion where the indicators are out of range. A corrective action may include an investigation of the reason for the excursion, evaluation of the situation and necessary follow-up action to return operation within the indicator range. An excursion is determined by the averaged discrete data point over a period of time. An excursion does not necessarily indicate a violation of an applicable requirement. If the corrective action measures fail to return the indicators to the appropriate range, the facility will report the exceedance to the department and conduct source testing within 90 days of the exceedance to demonstrate compliance with applicable requirements. If the test demonstrates compliance with emission limits then new indicator ranges must be set for monitoring and the new ranges must be incorporated in the operating permit. If the test demonstrates noncompliance with emission limits, then the facility, within 60 days, proposes a schedule to implement corrective action to bring the source into compliance and demonstrate compliance.

Compliance Assurance Monitoring (CAM) Plan for CE91 and CE92 Electrostatic Precipitator

I. Background

A. Emissions Unit: EP90/EU90
   Identification: Unit 9 Dry Bottom Tangentially Fired Boiler
   Description: Facility: Muscatine Power & Water, 1700 Dick Drake Way, Muscatine, Iowa 52761

B. Applicable Regulation, Emission Limit, and Monitoring Requirements:
   Applicable regulation: 567 IAC 23.1(2)“z”, Permit 80-A-191-P4
   40 CFR 60 Subpart Da
EPA PSD permit 80-E-001 dated 1/24/80 and revision 80-E-001-S dated 9/6/83

Emission Limits: PM: 0.03 lb/MMBtu, PM$_{10}$: 46.68 lb/hr, PM$_{2.5}$: 43.59 lb/hr

C. **Current Monitoring Requirements:**
- Stack Testing
- Continuous Opacity Monitoring (COMS) ME90A
- Audible Precipitator “Malfunction” Alarm

D. **Current Technology:** Electrostatic Precipitator

### II. Monitoring Approach:

<table>
<thead>
<tr>
<th>1. Indicator Measurement Approach</th>
<th>Opacity of ESP exhaust</th>
<th>Audible Precipitator “Malfunction” Alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMS in ESP exhaust</td>
<td>Meters continuously display voltage and amperage on each of the eight ESP control cabinets. The ESP “Automatic Control Panel” continuously monitors voltage and current and activates an alarm message to the FDG Control Room. Various systems monitor and display alarm conditions in the control room. Daily visual inspections of the ESP electromechanical operation are also conducted.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2. Indicator Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>A CAM excursion will be defined as <strong>opacity exceeding 16% over any 1-hour averaging period.</strong> Except during startup, shutdown, or cleaning of control equipment as per 567 IAC 24.1(1). Corrective action will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand, after it is determined that the opacity monitor is functioning properly.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>A CAM excursion will be defined as <strong>Failure of three T-R sets or more than 8 rappers per precipitator or the following T-R set operation “PPTR Fault” alarms:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>- T-R over temperature &gt;85$^\circ$ C</td>
</tr>
<tr>
<td>- T-R under voltage, which varies from &lt;70 to &lt;120 VAC on the transformer primary (or &lt;18 to &lt;30 KV on the transformer secondary)</td>
</tr>
<tr>
<td>- Primary voltage &lt;350 or &gt;500 VAC</td>
</tr>
<tr>
<td>- Over current:</td>
</tr>
<tr>
<td>- TR-1 &amp; TR-2 (750 MA) &gt;225 amp @ 480 VAC</td>
</tr>
</tbody>
</table>
Corrective action measures will be implemented on the occurrence of an above listed alarm. The appropriate measures for remediation will be implemented within eight hours plus the period of time until generating capacity is available to meet customer demand.

Random T-R set failure and rapper failure (up to three T-R sets per two precipitators and 8 rappers per precipitator) will not significantly affect precipitator performance.

<table>
<thead>
<tr>
<th>3. Performance Criteria</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Data Representativeness</td>
<td>COMS installed at an alternate representative location in the ESP exhaust per 40 CFR 60, Appendix B, Performance Specification 1 (PS-1).</td>
<td>The precipitator fault alarm was selected as the performance indicator because it is indicative of operation of the ESP in a manner necessary to comply with the emission standard. Continuous monitoring of operating conditions such as voltage, amperage, rapper failure, high hopper levels, high opacity, and continuous emissions monitor failure provides additional assurance of proper electromechanical operation of the ESP.</td>
</tr>
<tr>
<td>B. Verification of Operational Status</td>
<td>Results of initial COMS performance evaluation conducted per PS-1 (July 1997).</td>
<td>Results of equipment verification tests conducted to calibrate the audible and visible alarm displays.</td>
</tr>
<tr>
<td>C. QA/QC Practices/Criteria</td>
<td>Installation and evaluation of the COMS per PS-1. The continuous opacity monitor is automatically calibrated for zero and span adjustments daily.</td>
<td>All instruments and control equipment will be calibrated, maintained, and operated according to the manufactures specifications.</td>
</tr>
</tbody>
</table>
D. Monitoring Frequency

Monitor the opacity of the ESP exhaust continuously (every 10 seconds).

An audible alarm will continuously (greater than four times per hour) monitor T-R set failure, rapper control malfunction T-R temperature, T-R voltage and T-R current levels.

E. Data Collection Procedures

Set up the data acquisition system (DAS) to retain all 6-minute average opacity data.

Maintain records of T-R and rapper failures and precipitator fault alarms exceeding CAM thresholds for longer than one hour.

F. Averaging period

Use the 10-second opacity data to calculate 6-minute averages. Use the 6-minute averages to calculate hourly block average opacity for the CAM.

N/A

III. Quality Improvement Plan (QIP):

A Quality Improvement Plan (QIP) will be required to be submitted to the IDNR if an accumulation of excursions of either the opacity indicator or the various ESP operation alarms exceed 5 percent of the boiler’s normal operating time for a 6-month reporting period. All requirements in 40 CFR 64.8(b) shall be fulfilled if a QIP is required.

IV. Quality Assurance and Quality Control:

In addition to monitoring the opacity and ESP operation alarms, MP&W will conduct the following activities to assure compliance. The following monitoring is not required during periods of time greater than one day in which the source does not operate.

A. Monitor detection equipment, including alarm displays in the control room, which alert operators to irregular operating conditions such as high hopper levels, high opacity, and continuous opacity monitoring system (COMS) failure.

B. Conduct daily inspections of the ESP electromechanical operation:
   - Rapper operation
   - Ash removal system operation
   - ESP air leakage
   - Arcing

C. Each Major Scheduled Unit Outage (typically lasting four or more weeks):
   - Check and correct plate/electrode alignment
   - Inspect condition of collection surfaces, insulators, electrical contacts, rappers, doors and seals.
   - Evaluate and correct ash transport system wear areas
• Inspect internal structural components

Corrective action to correct abnormal operating conditions will be implemented within 8 hours plus the period of time until generating capacity is available to meet consumer demand.

D. Record Keeping and Recording:
• Records of all daily inspections and any actions resulting from these inspections will be kept for five years.
• Records of all planned unit outage inspections and any actions resulting from these inspections will be kept for five years.
• MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken. 40 CFR 64.9(a)(2)(i).
• MP&W shall record the summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable). 40 CFR 64.9(a)(2)(ii).
• All excursions and monitor downtime incidents will be reported in semi-annual monitoring reports and annual compliance certifications.

E. Quality Control:
• All instruments and equipment will be calibrated, maintained, and operated according to the manufacturer’s specifications.
• An inventory of spare parts will be maintained. Parts will be re-ordered as they are used.

Emission Units vented through this Emission Point: 912A
Emission Unit Description: Reversing Conveyor A – Discharge/Load
Raw Material/Fuel: Synthetic Gypsum
Rated Capacity: 20 tons/hr

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limits: 40%
Authority for Requirement: DNR Construction Permit 13-A-157
567 IAC 23.3(2)"d"

Pollutant: Particulate Matter (PM2.5)
Emission Limits: 0.00121 lb/hr
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014;
as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-157

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"c"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

Operating Limits:

A. There are no operating limits established by this permit.

Authority for Requirement: DNR Construction Permit 13-A-157
Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain records on the moisture content of the material handled in this emissions unit.

B. The PM$_{2.5}$ emission rate established in Permit Condition 10 is based on the maximum capacity of the unit, two transfer points and following equation and parameters:

$$E = (k) (0.0032) (U/5)^{1.3} / (M/2)^{1.4}$$  \[\text{(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)}\]

Where:
- $E =$ emission factor in lbs PM$_{2.5}$/ ton material
- $k =$ particle size multiplier, 0.053 for PM$_{2.5}$
- $U =$ mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M =$ minimum material moisture content, 10%, provided by applicant

Authority for Requirement: 567 IAC 23.3(2)"e"

**Operational Limits & Requirements**
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

**Operating Limits:**

A. The Synthetic Gypsum Truck Loading operation (EU919A) associated with the synthetic gypsum storage pile is limited to operating between 7:00 AM and 7:00 PM.
B. The Radial Stacker associated with the synthetic gypsum storage pile is limited to operating between 7:00 AM and 7:00 PM.
C. Pile formation operations associated with the synthetic gypsum storage pile are limited to operating between 7:00 AM and 7:00 PM.
D. A maximum of nine trucks shall be loaded with synthetic gypsum per day.
E. The amount of synthetic gypsum loaded out shall not exceed 78,840 tons per rolling 12-month period.
F. The ground surface area of the synthetic gypsum storage pile (EU919) shall not exceed 0.5 acre (21,780 square feet).

G. The maximum silt loading content of any paved road used by the trucks to haul away synthetic gypsum shall not exceed 13.5 g/m².

H. The silt content of the synthetic gypsum shall not exceed 10% by weight.

I. Operating limits A through H go into effect starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-146

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the following units operated: Synthetic Gypsum Truck Loading, Synthetic Gypsum Radial Stacker, Synthetic Gypsum Storage Pile formation. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record on the number of trucks loaded out with synthetic gypsum.

C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain the following monthly records:
   i. the amount of synthetic gypsum loaded out (tons); and
   ii. the rolling 12-month total of the amount of synthetic gypsum loaded out (tons).

D. The owner or operator shall maintain records on the moisture content and the silt content of the material handled in this emissions unit.

E. The owner or operator shall maintain records on the surface area of the synthetic gypsum storage pile. By either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall submit to the Department its methodology for determining the size of the synthetic gypsum storage pile. After the synthetic gypsum storage pile is measured using its methodology, the owner or operator shall submit a report to the Department by November 1, 2013 indicating the size of the synthetic gypsum storage pile.

F. For any paved road used by trucks to haul away synthetic gypsum, silt loading testing shall be done at least quarterly between April 1st through September 30th to assure that silt loading does not exceed 13.5 g/m². The owner or operator shall maintain records on the date and results of the silt loading test. After 2 years of silt loading tests, the owner or operator can request a re-evaluation of the testing frequency.
G. For the Synthetic Gypsum Truck Loading (EU919A), the PM$_{2.5}$ emissions rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

$$E = (k) (0.0032) \frac{(U/5)^{1.3}}{(M/2)^{1.4}} \quad (\text{AP-42, Equation 1 from Section 13.2.4.3, 11/2006})$$

Where:
- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M$ = minimum material moisture content, 10%, provided by applicant.

H. For the Synthetic Gypsum Radial Stacker, the PM$_{2.5}$ emissions rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

$$E = (k) (0.0032) \frac{(U/5)^{1.3}}{(M/2)^{1.4}} \quad (\text{AP-42, Equation 1 from Section 13.2.4.3, 11/2006})$$

Where:
- $E$ = emission factor in lbs PM$_{2.5}$/ ton material
- $k$ = particle size multiplier, 0.053 for PM$_{2.5}$
- $U$ = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- $M$ = minimum material moisture content, 10%, provided by applicant.

I. For the Synthetic Gypsum Storage Pile Formation, the PM$_{2.5}$ emission rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

$$E = [k (sL)^{0.91} (W)^{1.02}] (1-P/4N) \quad (\text{AP-42, Equation 2 from Section 13.2.1.3, 01/2011})$$

Where:
- $k$ = particle size multiplier (0.00054 lb/VMT), AP 42 Table 13.2.1-1
- $sL$ = silt loading, 13.5 g/m$^2$, provided by the applicant
- $W$ = 31.5 tons, average weight of vehicles, provided by the applicant
- $P$ = 110, annual number of days of precipitation exceeding 0.01 inch
- $N$ = 365, number of days in the averaging period.

The maximum vehicle miles traveled (VMT) for this operation is 0.032 VMT per hour.

Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-146

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

**Agency Approved Operation & Maintenance Plan Required?** Yes ☐ No ☒

**Facility Maintained Operation & Maintenance Plan Required?** Yes ☐ No ☒
Compliance Assurance Monitoring (CAM) Plan Required?  Yes ☐ No ☒

Authority for Requirement: 567 IAC 22.108(3)
**Emission Point ID Number: 920**

**Associated Equipment**

Associated Emission Unit ID Number: 920  
Emissions Control Equipment ID Number: CE922  
Control Equipment Description: Bin Vent Filter

---

Emission Unit vented through this Emission Point: 920  
Emission Unit Description: Fly Ash Silo Vent Filter Exhaust  
Raw Material/Fuel: Fly Ash  
Rated Capacity: 40 tons/hr

---

**Applicable Requirements**

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

Pollutant: Opacity  
Emission Limit: 40% (1)  
Authority for Requirement: DNR Construction Permit 80-A-201-S1  
567 IAC 23.3(2)“d”

(1) An exceedance of the indicator opacity of (10%) will require the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedance. If exceedances continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter (PM$_{2.5}$)  
Emission Limit(s): 0.0058 lb/hr  
Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
DNR Construction Permit 80-A-201-S1

Pollutant: Particulate Matter (PM$_{10}$)  
Emission Limit(s): 0.071 lb/hr  
Authority for Requirement: DNR Construction Permit 80-A-201-S1

Pollutant: Particulate Matter (PM)  
Emission Limit(s): 0.02 gr/dscf  
Authority for Requirement: DNR Construction Permit 80-A-201-S1
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. The owner or operator shall develop a operating and maintenance plan for the bin vent filter including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 80-A-201-S1

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the bin vent filter.

Authority for Requirement: DNR Construction Permit 80-A-201-S1

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 112.7
Stack Opening (inches, dia.): 49 x 64
Exhaust Temperature (°F): 150
Exhaust Flowrate (scfm): 417
Discharge Style: Horizontal

Authority for Requirement: DNR Construction Permit 80-A-201-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Emission Limit(s): 0.02 gr/dscf
Authority for Requirement: DNR Construction Permit 80-A-200-S1
Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. By no later than sixty (60) days from the date of the permit issuance, the stacks for this emissions unit (CE920) shall be raised to 13.83 feet and shall be made vertical, unobstructed.
B. EP920A and EP920B are the two emission points for the fly ash vacuum blowers. Only one of the two emission points shall operate at the same time.
C. For the control equipment, the cartridge filter media shall be Dollinger’s Fiberloc 063 or Fiberloc 195 filter media or a filter media with an equivalent high efficiency for particulate control.
D. The owner or operator shall develop a operating and maintenance plan for the cartridge filter including a preventative maintenance schedule that is consistent with the manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: DNR Construction Permit 80-A-200-S1

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. The owner or operator shall properly operate and maintain equipment to monitor the differential pressure drop across the cartridge filter. The monitoring devices and any recorders shall be installed, calibrated, operated and maintained in accordance with the manufacturer’s recommendations, instructions and operating manuals or per written facility specific operation and maintenance plan.
B. The owner or operator shall monitor the pressure drop across the cartridge filter, in inches of water, continuously. This requirement shall not apply on the days that the equipment is not in operation.
C. The owner or operator shall follow its procedure of replacing the filter media when the differential pressure across the cartridge filter exceeds 30 inches water column. The cartridge filter shall be replaced before the differential pressure exceeds 35 inches water column. A record shall be maintained on when the cartridge filter is replaced.
D. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the cartridge filter.
E. The owner or operator shall submit a notification to the Iowa DNR, Air Quality Bureau when the modification to the stack height has been completed.

Authority for Requirement: DNR Construction Permit 80-A-200-S1
**Emission Point Characteristics**

*This emission point shall conform to the conditions listed below.*

Stack Height (ft, from the ground): 13.83  
Stack Opening (inches, dia.): 18  
Exhaust Temperature (°F): 190  
Exhaust Flowrate (scfm): 2,920  
Discharge Style: Vertical Unobstructed  
Authority for Requirement: DNR Construction Permit 80-A-200-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

Pollutant: Fugitive Dust
Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.
Authority for Requirement: 567 IAC 23.3(2)"c"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. Trucks shall be loaded by means of an enclosed loading spout.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the emissions unit is limited to operating between 7:00 AM and 4:00 PM.
C. The owner or operator shall develop a operating and maintenance plan for the enclosed loading spout including a preventative maintenance schedule that is consistent with the
manufacturer's instructions for routine and long-term maintenance.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-148

Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when this emissions unit operated. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.
B. The owner or operator shall maintain a record of all inspections and maintenance and any action resulting from the inspection and maintenance of the enclosed loading spout.
C. The owner or operator shall maintain records on the moisture content of the material handled in this emissions unit.
D. For the Dry Fly Ash Truck Unloading (EU924), the PM2.5 emissions rate established in the Emission Limitations section of this permit is based on the maximum capacity of the unit and the following equation and parameters:
\[
E = (k) (0.0032) (U/5)1.3 / (M/2)1.4] (1 – 0.8) \quad (AP-42, Equation 1 from Section 13.2.4.3, 11/2006)
\]
Where:
- \(E\) = emission factor in lbs PM2.5/ ton material
- \(k\) = particle size multiplier, 0.053 for PM2.5
- \(U\) = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- \(M\) = minimum material moisture content, 0.5%, provided by applicant.
- 0.8 = control efficiency credit given to enclosed loading spout

Authority for Requirement: 567 IAC 23.3(2)“e"

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the Ash/Slag Truck Loading operations (EU860B) associated with the ash/slag storage pile are limited to operating between 7:00 AM and 7:00 PM.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the Ash/Slag Truck Unloading operations (EU860C) associated with the ash/slag storage pile are limited to operating between 7:00 AM and 7:00 PM.
C. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the Ash/Slag Storage Pile Bulldozing operation (EU860D) is limited to operating between 7:00 AM and 7:00 PM.
D. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, only one bulldozer shall be in operation at any one time on the ash/slag storage pile.
E. The silt content of the material stored in the ash/slag storage pile (EU860) shall not exceed 1.66% by weight.

Authority for Requirement: Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-143
Reporting & Record Keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources.

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the following units operated: Ash/Slag Truck Loading (EU860B), Ash/Slag Truck Unloading (EU860C) and Ash/Slag Storage Pile Bulldozing (EU860D). This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.

B. The owner or operator shall maintain records on the moisture content and the silt content of the material handled in this emissions unit.

C. For the Ash/Slag Truck Loading (EU860B), the PM2.5 emissions rate established in the Emissions Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

\[ E = (k) (0.0032) \frac{(U/5)1.3}{(M/2)1.4} \]  
(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:
- \( E \) = emission factor in lbs PM2.5/ ton material
- \( k \) = particle size multiplier, 0.053 for PM2.5
- \( U \) = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- \( M \) = minimum material moisture content, 8.44%, provided by applicant.

D. For the Ash/Slag Truck Unloading (EU860C), the PM2.5 emissions rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

\[ E = (k) (0.0032) \frac{(U/5)1.3}{(M/2)1.4} \]  
(AP-42, Equation 1 from Section 13.2.4.3, 11/2006)

Where:
- \( E \) = emission factor in lbs PM2.5/ ton material
- \( k \) = particle size multiplier, 0.053 for PM2.5
- \( U \) = mean wind speed, 7.5 miles per hour, provided by the applicant; and
- \( M \) = minimum material moisture content, 8.44%, provided by applicant.

E. For the Ash/Slag Pile Bulldozing (EU860D), the PM2.5 emission rate established in the Emission Limits section of this permit is based on the maximum capacity of the unit and the following equation and parameters:

\[ ER = (0.105) 5.7 (s)1.2 / (M)1.3 \]  
(AP-42, Table 11.9-1, bulldozing overburden, 7/1998)

Where:
- \( ER \) = emission rate, lbs PM2.5 per hour
- 0.105 = scaling factor for PM2.5
- \( s \) = material silt content, 1.66%, based on analysis of material silt content provided by the applicant; and
- \( M \) = minimum material moisture content, 8.44%, based on analysis of material moisture content, provided by applicant.

Authority for Requirement:  
Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)  
DNR Construction Permit 13-A-143
**Monitoring Requirements**

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: 927

Associated Equipment

Associated Emission Unit ID Numbers: 927

Emission Units vented through this Emission Point: 927
Emission Unit Description: Portable Diesel Tank – Breathing Loss & Working Loss
Raw Material/Fuel: Diesel Fuel
Rated Capacity: 300 Gallon Tank

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit: 40% (1)
Authority for Requirement: DNR Construction Permit 01-A-458
567 IAC 23.3(2)"d"

(1) An exceedence of the indicator opacity of (25%) will required the owner/operator to promptly investigate the emission unit and make corrections to operations or equipment associated with the exceedence. If exceedences continue after the corrections, the DNR may require additional proof to demonstrate compliance (e.g., stack testing).

Pollutant: Particulate Matter
Emission Limit(s): 0.1 gr/dscf
Authority for Requirement: DNR Construction Permit 01-A-458
567 IAC 23.3(2)"a"

Emission Point Characteristics
The emission point shall conform to the specifications listed below.

Stack Height (feet from the ground): NA
Stack Diameter (inches): NA
Stack Exhaust Flow Rate (scfm): NA
Stack Temperature (°F): NA
Discharge Style: NA
Authority for Requirement: DNR Construction Permit 01-A-458

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall
submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.

Operational Limits & Requirements

The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. This engine is limited to burning #1 or #2 diesel fuel oil only.
B. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, this engine is limited to operating sixteen hours per day from 6 AM to 10 PM.
C. The maximum sulfur content of the fuel oil burned in this engine shall not exceed 0.5% by weight.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 13-A-151

Reporting & Record keeping:

The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:

A. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, the owner or operator shall maintain a daily record of when the engines operated. This record shall include the following information: date of operation, initial start up time of operation and final end time of operation.
B. The owner or operator shall perform an analysis and shall maintain records on the sulfur content of each shipment of oil received. Alternatively, the owner or operator shall have the oil supplier provide analyses on the sulfur content of the oil received. The analysis does not have to be for each shipment of oil received, but shall be documented by receipts from the fuel supplier, a statement from the fuel supplier on the specification of the sulfur content of the purchased oil, or other supporting documentation.

Authority for Requirement: DNR Construction Permit 13-A-151

Emission Point Characteristics

This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 6.8
Stack Opening (inches, dia.): 3
Exhaust Temperature (°F): 800
Exhaust Flowrate (scfm): 420
Discharge Style: Vertical Unobstructed
Authority for Requirement: DNR Construction Permit 13-A-151

Applicable Requirements

Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

Pollutant: Opacity
Emission Limit(s): 40%
Authority for Requirement: 567 IAC 23.3(2)"d"

Pollutant: Particulate Matter (PM)
Emission Limit(s): 0.1 gr/dscf
Authority for Requirement: 567 IAC 23.3(2)"a"

Pollutant: Sulfur Dioxide (SO2)
Emission Limit(s): 2.5 lb/MMBtu
Authority for Requirement: 567 IAC 23.3(3)"b"(2)

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

1. No person shall allow, cause or permit the combustion of number 1 or number 2 fuel oil exceeding a sulfur content of 0.5 percent by weight.

Authority for Requirement: 567 IAC 23.3(3)"b"(1)
Reporting & Record keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:

1. The facility shall monitor the percent of sulfur by weight in the fuel oil as delivered. The documentation may be vendor supplied or facility generated.

Authority for Requirement: 567 IAC 22.108(3)

NSPS and NESHAP Requirements:

These emergency engines are subject to 40 CFR 63 Subpart ZZZZ - National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (RICE). According to 40 CFR 63.6590(a)(1)(ii) this compression ignition emergency engine, located at a major source, is an existing stationary RICE as it was constructed prior to June 12, 2006.

Compliance Date
Per 63.6595(a)(1) you must comply with the provisions of Subpart ZZZZ that are applicable by May 3, 2013.

Fuel Requirements
No requirements except (beginning January 1, 2015) if you own or operate an existing emergency compression ignition stationary engine with a site rating of more than 100 bhp and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates or is contractually obligated to be available for more than 15 hours per calendar year for the purposes specified in 40 CFR 63.6640(f)(2)(ii) and (iii), you must use diesel fuel that meets the requirements in 40 CFR 80.510(b) for nonroad diesel fuel. Those requirements include a maximum sulfur content of 15 ppm (0.0015%) by weight and a minimum cetane index of 40 or a maximum aromatic content of 35 percent by volume. 40 CFR 63.6604(b)

Operation and Maintenance Requirements 40 CFR 63.6602, 63.6625, 63.6640 and Tables 2c and 6 to Subpart ZZZZ

1. Change oil and filter every 500 hours of operation or annually, whichever comes first. (See 63.6625(i) for the oil analysis option to extend time frame of requirements.)
2. Inspect air cleaner every 1000 hours of operation or annually, whichever comes first, and replace as necessary.
3. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.
4. Operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.
5. Install a non-resettable hour meter if one is not already installed.
6. Minimize the engine's time spent at idle during startup and minimize the engine's startup
time to a period needed for appropriate and safe loading of the engine, not to exceed 30
minutes.

Operating Limits 40 CFR 63.6640(f)
1. Any operation other than emergency operation, maintenance and testing, emergency
demand response and operation in non-emergency situations (up to) 50 hours per year is
prohibited.
2. There is no time limit on the use of emergency stationary RICE in emergency situations.
3. You may operate your emergency stationary RICE up to 100 combined hours per
calendar year for maintenance checks and readiness testing, emergency demand response
and periods where there is a deviation of voltage or frequency of 5 percent or greater
below standard voltage or frequency. See 40 CFR 63.6640(f)(2) for additional
information and restrictions.
4. You may operate your emergency stationary RICE up to 50 hours per calendar year for
non-emergency situations, but those 50 hours are counted toward the 100 hours of
maintenance and testing and emergency demand response. The 50 hours per year for
non-emergency situations cannot be used for peak shaving or non-emergency demand
response, or to generate income for a facility to supply power to an electric grid or
otherwise supply power as part of a financial arrangement with another entity.

Recordkeeping Requirements 40 CFR 63.6655
1. Keep records of the maintenance conducted on the stationary RICE.
2. Keep records of the hours of operation of the engine that is recorded through the non-
resettable hour meter. Document how many hours are spent for emergency operation,
including what classified the operation as emergency and how many hours are spent for
non-emergency operation. See 40 CFR 63.6655(f) for additional information.

Notification and Reporting Requirements 40 CFR 63.6645, 63.6650 and Table 2c to Subpart
ZZZZ
1. An initial notification is not required per 40 CFR 63.6645(a)(5).
2. A report may be required for failure to perform the work practice requirements on the
schedule required in Table 2c. (See Footnote 1 of Table 2c for more information.)
3. If you own or operate an emergency stationary RICE with a site rating of more than 100
bhp that operates or is contractually obligated to be available for more than 15 hours per
calendar year for the purposes specified in 40 CFR 63.6640(f)(2)(ii) and (iii), you must
submit an annual report. See 40 CFR 63.6650(h) for additional information.

Pollutant: Carbon Monoxide (CO)
Emission Limit(s): 3.20 lb/hr
Authority for Requirement: DNR Construction Permit 11-A-562-S1

**Operational Limits & Requirements**
*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

A. This unit shall not be used for more than 465 hours per twelve (12) month period, rolled monthly.
B. This engine is limited to burning #1 or #2 diesel fuel oil only.
C. The sulfur content of all fuel used in this unit shall not exceed 0.05% by weight.
D. This unit may only be operated at the following locations:
   - Muscatine Power and Water Main Property (Power Plant)
     - Well #5
     - Well #15
   - Progress Park Location:
     - Well #25
     - Well #26
   - Grandview Location:
     - Well #28

This unit may also be used in the general area it is normally stored for testing purposes. Since the operation of this unit has been evaluated at the locations identified above, the relocation notification required in DNR Construction Permit 11-A-562-S1 Condition 8 for portable equipment is not required when this unit is moved to any of these locations.

Note: These locations shall be identified based on the documentation submitted during the review of this application. Additional locations may be added but will require review of the modeling analysis to approve use in those locations.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 11-A-562-S1
Reporting & Record keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:

A. Each time this unit is operated log the following information:
   a. The date and time the usage starts;
   b. The duration of the usage;
   c. The reason for the usage (IE testing, emergency, etc);
   d. The location of the usage.

B. At the end of each month, calculate the total number of hours this unit operated over the previous month.

C. At the end of each month, calculate the total number of hours this unit operated over the previous twelve (12) months.

D. For each diesel fuel delivery received on site, maintain documentation of the type of fuel received.

E. Maintain, on site, a fuel analysis that is no more than 12 months old which shows the sulfur content of each type of fuel received over the previous 12 months.

Authority for Requirement: Muscatine PM2.5 SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)
DNR Construction Permit 11-A-562-S1

Emission Point Characteristics
This emission point shall conform to the conditions listed below.

Stack Height (ft, from the ground): 13.5
Stack Opening (inches, dia.): 6
Exhaust Temperature (°F): 805
Exhaust Flowrate (scfm): 1050
Discharge Style: Vertical Unobstructed

Authority for Requirement: DNR Construction Permit 11-A-562-S1

The temperature and flowrate are intended to be representative and characteristic of the design of the permitted emission point. The Department recognizes that the temperature and flow rate may vary with changes in the process and ambient conditions. If it is determined that either the temperature or flowrate above are different than the values stated, the owner or operator shall submit a request to the Department within thirty (30) days of the discovery to determine if a permit amendment is required or submit a permit application requesting to amend the permit.
Monitoring Requirements
The owner/operator of this equipment shall comply with the monitoring requirements listed below.

Agency Approved Operation & Maintenance Plan Required?   Yes ☐ No ☑

Facility Maintained Operation & Maintenance Plan Required? Yes ☐ No ☑

Compliance Assurance Monitoring (CAM) Plan Required? Yes ☐ No ☑

**Emission Limits (lb./hr, gr./dscf, lb./MMBtu, % opacity, etc.)**

*The emissions from this emission point shall not exceed the levels specified below.*

**Pollutant:** Particulate Matter (PM$_{2.5}$)

Emission Limit(s): For this emissions unit the limits are expressed in the form of a work practice instead of an emission limit. See the Operating Limits section below for the work practice requirements.

**Authority for Requirement:** Muscatine PM$_{2.5}$ SIP (79 FR 71025, December 1, 2014; as amended by 80 FR 18133, April 3, 2015)

DNR Construction Permit 13-A-160-S1

**Pollutant:** Fugitive Dust

Emission Limit: No person shall allow, cause or permit any materials to be handled, transported or stored; or a building, its appurtenances or a construction haul road to be used, constructed, altered, repaired or demolished, without taking reasonable precautions to prevent a nuisance. All persons shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property on which the emissions originate.

**Authority for Requirement:** 567 IAC 23.3(2)"c"

### Operational Limits & Requirements

*The owner/operator of this equipment shall comply with the operational limits and requirements listed below.*

A. The following road segments are covered by this permit:

<table>
<thead>
<tr>
<th>Road #</th>
<th>Segment ID</th>
<th>Length &amp; type of surface</th>
<th>Used by trucks hauling:</th>
<th>Physical Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</tbody>
</table>
C. Haul road segment identified as “B-C curved” shall be paved. Use of this road by commercial vehicles shall be limited to the hours of 0700 through 1900 hours daily.

D. Fugitive emissions from road segments “A-B”, “B-C straight”, “B-C curved”, and “C-D” shall be controlled to a maximum silt loading content of 6.75 g/m². This represents 50% control efficiency. Water flushing shall occur at least once per month, subject to precipitation, environmental factors and roadway use. The water flushing rate shall be a minimum of 0.23 gallons per square yard. Silt loading testing shall be done, before flushing, at least quarterly between April 1st through September 30th to assure that silt loading does not exceed 6.75 g/m².

E. The maximum silt loading content of the other paved road segments listed in Condition B. above shall not exceed 13.5 g/m². Silt loading testing shall be done on these road segments at least quarterly between April 1st through September 30th to assure that the silt loading does not exceed 13.5 g/m².

F. If water flushing cannot be accomplished because the ambient air temperature (as measured at the facility during the daylight operating hours) will be less than 35°F or conditions due to weather, in combination with the application of water, could create hazardous driving conditions, then the water flushing can be postponed and performed as soon after the scheduled date as the conditions preventing the application have abated. Additionally, water flushing need not occur when a rain gauge located at the site indicates that at least 0.2 inch of precipitation (water equivalent) has occurred within the preceding 24-hour time period.

1 One way trip for trucks.

Authority for Requirement: DNR Construction Permit 13-A-160-S1

Reporting & Record keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:

A. The owner or operator shall maintain a daily record on the facility’s haul roads. These records shall show the following information:
   i. The Segment ID; and

<table>
<thead>
<tr>
<th>Segment ID</th>
<th>Maximum Number of Truck per Year (Roundtrip except where noted)</th>
<th>Control measures Required:</th>

</tr>
</tbody>
</table>
ii. The number of each type of truck that has used the road segment (i.e. gypsum, limestone, ash/slag, flyash, or ChemMod®). With the exception of ash/slag trucks using road segments B – C (straight) and B – C (curved), this is the number of roundtrips made by each type of truck. For ash/slag trucks using road segments B-C (straight) this is the number of empty trucks using the road. For ash/slag trucks using road segments B-C (curved) this is the number of full trucks using the road.

B. The owner or operator shall maintain the following monthly records on the facility’s haul roads:
   i. The Segment ID;
   ii. The total number of each type of truck that has used the road segment; and
   iii. The rolling 12-month total of the number of each type of truck that has used the road segment.

C. The owner or operator shall maintain records on the road segments A-B, B-C (straight), B-C (curved), and C-D. These records shall show the following information:
   i. The Segment ID;
   ii. The dates of silt loading testing and the results of the test;
   iii. The dates of water flushing and the amount of water applied; and
   iv. A record of why water flushing could not be conducted on a scheduled day because of ambient air temperature, precipitation, or other environmental or safety factors.
   For each silt loading test, the test shall consist of taking samples from each of the four identified road segments. The results of the sampling from road segments A-B, B-C (straight), and C-D can then be averaged together. The results of the sampling from road segment B-C (curved) shall not be averaged with the results from the other road segments.
   After 5 years of silt loading tests on road segments A-B, B-C (straight), B-C (curved) and C-D, the owner or operator can request a re-evaluation of the testing frequency.

D. The owner or operator shall maintain records on road segments D-I, I-F, I-E, A-G, F-K, and K-L. These records shall show the following information:
   i. The Segment ID; and
   ii. The dates of the silt loading testing and the results of the test.
   For each silt loading test, the test shall consist of taking samples from each of the six identified road segments. The results of the sampling from road segments D-I, I-F, and I-E can then be averaged together. The results of the sampling from road segments F-K and K-L can also be averaged together. The results of the sampling from road segment A-G shall not be averaged with the results from the other road segments.
   After 2 years of silt loading tests on road segments D-I, I-F, I-E, A-G, F-K, K-L the owner or operator can request a re-evaluation of the testing frequency.

E. The owner or operator shall maintain a daily record of when trucks used the following road segments: B – C (curved), I – F, I – E, E – H, A – G, G – J, and J – J loop. This record shall include the following information: date of operation, initial start up time of truck use and final end time of truck use.

Authority for Requirement: 567 IAC 22.108(3)
Emission Point ID Number: Levee

Associated Equipment

Associated Emission Unit ID Numbers: Levee

Emission Units vented through this Emission Point: Levee
Emission Unit Description: Mississippi River Levee
Raw Material/Fuel: Public Access
Rated Capacity:

Applicable Requirements

Emission Limits (lb/hr, gr/dscf, lb/MMBtu, % opacity, etc.)
The emissions from this emission point shall not exceed the levels specified below.

There are no emission limits for this emission unit.

Operational Limits & Requirements
The owner/operator of this equipment shall comply with the operational limits and requirements listed below.

A. There are no operating limits associated with the river levee.

Authority for Requirement: DNR Construction Permit 13-A-161

Reporting & Record keeping:
The following records shall be maintained on-site for five (5) years and available for inspection upon request by representatives of the Department of Natural Resources:

A. Control measures include restricting public access to the levee that is located between Muscatine Power and Water’s (MPW) property and the Mississippi River. Starting on either August 14, 2013 or by no later than 30 days after the date of permit issuance, whichever comes later, MPW shall restrict public access to the levee by posting signs warning of restricted access to the north and south fence lines that intersect the levee. A third sign will be posted in the area of highest modeled concentrations prohibiting loitering and fishing. In-person surveillance of the levee shall be conducted by MPW staff periodically throughout the day with documentation as to surveillance times and locations.

The restriction does not apply to MPW employees, employees, owner or lessees of contiguous properties, federal, state or local officials, emergency and maintenance service personnel (both private and public section), who have a legitimate reason or need for accessing the levee.

**Monitoring Requirements**

*The owner/operator of this equipment shall comply with the monitoring requirements listed below.*

- **Agency Approved Operation & Maintenance Plan Required?**  Yes ☐ No ☑
- **Facility Maintained Operation & Maintenance Plan Required?**  Yes ☐ No ☑
- **Compliance Assurance Monitoring (CAM) Plan Required?**  Yes ☐ No ☑

Authority for Requirement: 567 IAC 22.108(3)
IV. General Conditions

This permit is issued under the authority of the Iowa Code subsection 455B.133(8) and in accordance with 567 Iowa Administrative Code chapter 22.

G1. Duty to Comply

1. The permittee must comply with all conditions of the Title V permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action; for a permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. 567 IAC 22.108(9) "a"

2. Any compliance schedule shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based. 567 IAC 22.105 (2) "h" (3)

3. Where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be enforceable by the administrator and are incorporated into this permit. 567 IAC 22.108 (1) "b"

4. Unless specified as either "state enforceable only" or "local program enforceable only", all terms and conditions in the permit, including provisions to limit a source's potential to emit, are enforceable by the administrator and citizens under the Act. 567 IAC 22.108 (14)

5. It shall not be a defense for a permittee, in an enforcement action, that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit. 567 IAC 22.108 (9) "b"

6. For applicable requirements with which the permittee is in compliance, the permittee shall continue to comply with such requirements. For applicable requirements that will become effective during the permit term, the permittee shall meet such requirements on a timely basis. 567 IAC 22.108 (15) "c"

G2. Permit Expiration

1. Except as provided in rule 567—22.104(455B), permit expiration terminates a source’s right to operate unless a timely and complete application for renewal has been submitted in accordance with rule 567—22.105(455B). 567 IAC 22.116 (2)

2. To be considered timely, the owner, operator, or designated representative (where applicable) of each source required to obtain a Title V permit shall submit on forms or electronic format specified by the Department to the Air Quality Bureau, Iowa Department of Natural Resources, Air Quality Bureau, 7900 Hickman Rd, Suite #1, Windsor Heights, Iowa 50324, two copies (three if your facility is located in Linn or Polk county) of a complete permit application, at least 6 months but not more than 18 months prior to the date of permit expiration. An additional copy must also be sent to U.S. EPA Region VII, Attention: Chief of Air Permits, 11201 Renner Blvd., Lenexa, KS 66219. Additional copies to local programs or EPA are not required for application materials submitted through the electronic format specified by the Department. The application must include all emission points, emission units, air pollution control equipment, and monitoring devices at the facility. All emissions generating activities, including fugitive emissions, must be included. The definition of a complete application is as indicated in 567 IAC 22.105 (2). 567 IAC 22.105

G3. Certification Requirement for Title V Related Documents

Any application, report, compliance certification or other document submitted pursuant to this permit shall contain certification by a responsible official of truth, accuracy, and completeness. All certifications shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. 567 IAC 22.107 (4)
G4. Annual Compliance Certification
By March 31 of each year, the permittee shall submit compliance certifications for the previous calendar year. The certifications shall include descriptions of means to monitor the compliance status of all emissions sources including emissions limitations, standards, and work practices in accordance with applicable requirements. The certification for a source shall include the identification of each term or condition of the permit that is the basis of the certification; the compliance status; whether compliance was continuous or intermittent; the method(s) used for determining the compliance status of the source, currently and over the reporting period consistent with all applicable department rules. For sources determined not to be in compliance at the time of compliance certification, a compliance schedule shall be submitted which provides for periodic progress reports, dates for achieving activities, milestones, and an explanation of why any dates were missed and preventive or corrective measures. The compliance certification shall be submitted to the administrator, director, and the appropriate DNR Field office. 567 IAC 22.108 (15) "e"

G5. Semi-Annual Monitoring Report
By March 31 and September 30 of each year, the permittee shall submit a report of any monitoring required under this permit for the 6 month periods of July 1 to December 31 and January 1 to June 30, respectively. All instances of deviations from permit requirements must be clearly identified in these reports, and the report must be signed by a responsible official, consistent with 567 IAC 22.107(4). The semi-annual monitoring report shall be submitted to the director and the appropriate DNR Field office. 567 IAC 22.108 (5)

G6. Annual Fee
1. The permittee is required under subrule 567 IAC 22.106 to pay an annual fee based on the total tons of actual emissions of each regulated air pollutant. Beginning July 1, 1996, Title V operating permit fees will be paid on July 1 of each year. The fee shall be based on emissions for the previous calendar year.
2. The fee amount shall be calculated based on the first 4,000 tons of each regulated air pollutant emitted each year. The fee to be charged per ton of pollutant will be available from the department by June 1 of each year. The Responsible Official will be advised of any change in the annual fee per ton of pollutant.
3. The following forms shall be submitted annually by March 31 documenting actual emissions for the previous calendar year.
   a. Form 1.0 "Facility Identification";
   b. Form 4.0 "Emissions unit-actual operations and emissions" for each emission unit;
   c. Form 5.0 "Title V annual emissions summary/fee"; and
   d. Part 3 "Application certification."
4. The fee shall be submitted annually by July 1. The fee shall be submitted with the following forms:
   a. Form 1.0 "Facility Identification";
   b. Form 5.0 "Title V annual emissions summary/fee";
   c. Part 3 "Application certification."
5. If there are any changes to the emission calculation form, the department shall make revised forms available to the public by January 1. If revised forms are not available by January 1, forms from the previous year may be used and the year of emissions documented changed. The department shall calculate the total statewide Title V emissions for the prior calendar year and make this information available to the public no later than April 30 of each year.
6. Phase I acid rain affected units under section 404 of the Act shall not be required to pay a fee for emissions which occur during the years 1993 through 1999 inclusive.
7. The fee for a portable emissions unit or stationary source which operates both in Iowa and out of state shall be calculated only for emissions from the source while operating in Iowa.
8. Failure to pay the appropriate Title V fee represents cause for revocation of the Title V permit as indicated in 567 IAC 22.115(1)"d".

G7. Inspection of Premises, Records, Equipment, Methods and Discharges
Upon presentation of proper credentials and any other documents as may be required by law, the permittee shall allow the director or the director's authorized representative to:
1. Enter upon the permittee's premises where a Title V source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
3. Inspect, at reasonable times, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
4. Sample or monitor, at reasonable times, substances or parameters for the purpose of ensuring compliance with the permit or other applicable requirements. 567 IAC 22.108 (15)"b"

G8. Duty to Provide Information
The permittee shall furnish to the director, within a reasonable time, any information that the director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee also shall furnish to the director copies of records required to be kept by the permit, or for information claimed to be confidential, the permittee shall furnish such records directly to the administrator of EPA along with a claim of confidentiality. 567 IAC 22.108 (9)"e"

G9. General Maintenance and Repair Duties
The owner or operator of any air emission source or control equipment shall:
1. Maintain and operate the equipment or control equipment at all times in a manner consistent with good practice for minimizing emissions.
2. Remedy any cause of excess emissions in an expeditious manner.
3. Minimize the amount and duration of any excess emission to the maximum extent possible during periods of such emissions. These measures may include but not be limited to the use of clean fuels, production cutbacks, or the use of alternate process units or, in the case of utilities, purchase of electrical power until repairs are completed.
4. Schedule, at a minimum, routine maintenance of equipment or control equipment during periods of process shutdowns to the maximum extent possible. 567 IAC 24.2(1)

G10. Recordkeeping Requirements for Compliance Monitoring
1. In addition to any source specific recordkeeping requirements contained in this permit, the permittee shall maintain the following compliance monitoring records, where applicable:
   a. The date, place and time of sampling or measurements
   b. The date the analyses were performed.
   c. The company or entity that performed the analyses.
   d. The analytical techniques or methods used.
   e. The results of such analyses; and
   f. The operating conditions as existing at the time of sampling or measurement.
   g. The records of quality assurance for continuous compliance monitoring systems (including but not limited to quality control activities, audits and calibration drifts.)
2. The permittee shall retain records of all required compliance monitoring data and support information for a period of at least 5 years from the date of compliance monitoring sample, measurement report or application. Support information includes all calibration and maintenance records and all original strip chart recordings for continuous compliance monitoring, and copies of all reports required by the permit.

3. For any source which in its application identified reasonably anticipated alternative operating scenarios, the permittee shall:
   a. Comply with all terms and conditions of this permit specific to each alternative scenario.
   b. Maintain a log at the permitted facility of the scenario under which it is operating.
   c. Consider the permit shield, if provided in this permit, to extend to all terms and conditions under each operating scenario. 567 IAC 22.108(4), 567 IAC 22.108(12)

G11. Evidence used in establishing that a violation has or is occurring.
Notwithstanding any other provisions of these rules, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any provisions herein.

1. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at a source:
   a. A monitoring method approved for the source and incorporated in an operating permit pursuant to 567 Chapter 22;
   b. Compliance test methods specified in 567 Chapter 25; or
   c. Testing or monitoring methods approved for the source in a construction permit issued pursuant to 567 Chapter 22.

2. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring, or information gathering methods:
   a. Any monitoring or testing methods provided in these rules; or
   b. Other testing, monitoring, or information gathering methods that produce information comparable to that produced by any method in subrule 21.5(1) or this subrule. 567 IAC 21.5(1)-567 IAC 21.5(2)

If the permittee is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permittee shall notify the department of this requirement. The plan shall be filed with all appropriate authorities by the deadline specified by EPA. A certification that this risk management plan is being properly implemented shall be included in the annual compliance certification of this permit. 567 IAC 22.108(6)

G13. Hazardous Release
The permittee must report any situation involving the actual, imminent, or probable release of a hazardous substance into the atmosphere which, because of the quantity, strength and toxicity of the substance, creates an immediate or potential danger to the public health, safety or to the environment. A verbal report shall be made to the department at (515) 725-8694 and to the local police department or the office of the sheriff of the affected county as soon as possible but not later than six hours after the discovery or onset of the condition. This verbal report must be followed up with a written report as indicated in 567 IAC 131.2(2). 567 IAC Chapter 131-State Only

G14. Excess Emissions and Excess Emissions Reporting Requirements
1. Excess Emissions. Excess emission during a period of startup, shutdown, or cleaning of control equipment is not a violation of the emission standard if the startup, shutdown or cleaning is accomplished expeditiously and in a manner consistent with good practice for minimizing emissions. Cleaning of control equipment which does not require the shutdown of the process equipment shall be limited to one six-minute period per one-hour period. An incident of excess emission (other than an incident during startup, shutdown or cleaning of control equipment) is a violation. If the owner or operator of a source maintains that the incident of excess emission was due to a malfunction, the owner or operator must show that the conditions which caused the incident of excess emission were not preventable by reasonable maintenance and control measures. Determination of any subsequent enforcement action will be made following review of this report. If excess emissions are occurring, either the control equipment causing the excess emission shall be repaired in an expeditious manner or the process generating the emissions shall be shutdown within a reasonable period of time. An expeditious manner is the time necessary to determine the cause of the excess emissions and to correct it within a reasonable period of time. A reasonable period of time is eight hours plus the period of time required to shut down the process without damaging the process equipment or control equipment. A variance from this subrule may be available as provided for in Iowa Code section 455B.143. In the case of an electric utility, a reasonable period of time is eight hours plus the period of time until comparable generating capacity is available to meet consumer demand with the affected unit out of service, unless, the director shall, upon investigation, reasonably determine that continued operation constitutes an unjustifiable environmental hazard and issue an order that such operation is not in the public interest and require a process shutdown to commence immediately.

2. Excess Emissions Reporting
   a. Initial Reporting of Excess Emissions. An incident of excess emission (other than an incident of excess emission during a period of startup, shutdown, or cleaning) shall be reported to the appropriate field office of the department within eight hours of, or at the start of the first working day following the onset of the incident. The reporting exemption for an incident of excess emission during startup, shutdown or cleaning does not relieve the owner or operator of a source with continuous monitoring equipment of the obligation of submitting reports required in 567-subrule 25.1(6). An initial report of excess emission is not required for a source with operational continuous monitoring equipment (as specified in 567-subrule 25.1(1) ) if the incident of excess emission continues for less than 30 minutes and does not exceed the applicable emission standard by more than 10 percent or the applicable visible emission standard by more than 10 percent opacity. The initial report may be made by electronic mail (E-mail), in person, or by telephone and shall include as a minimum the following:
      i. The identity of the equipment or source operation from which the excess emission originated and the associated stack or emission point.
      ii. The estimated quantity of the excess emission.
      iii. The time and expected duration of the excess emission.
      iv. The cause of the excess emission.
      v. The steps being taken to remedy the excess emission.
      vi. The steps being taken to limit the excess emission in the interim period.
   b. Written Reporting of Excess Emissions. A written report of an incident of excess emission shall be submitted as a follow-up to all required initial reports to the department...
within seven days of the onset of the upset condition, and shall include as a minimum the following:

i. The identity of the equipment or source operation point from which the excess emission originated and the associated stack or emission point.

ii. The estimated quantity of the excess emission.

iii. The time and duration of the excess emission.

iv. The cause of the excess emission.

v. The steps that were taken to remedy and to prevent the recurrence of the incident of excess emission.

vi. The steps that were taken to limit the excess emission.

vii. If the owner claims that the excess emission was due to malfunction, documentation to support this claim. 567 IAC 24.1(1)-567 IAC 24.1(4)

3. Emergency Defense for Excess Emissions. For the purposes of this permit, an “emergency” means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include non-compliance, to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation or operator error. An emergency constitutes an affirmative defense to an action brought for non-compliance with technology based limitations if it can be demonstrated through properly signed contemporaneous operating logs or other relevant evidence that:

a. An emergency occurred and that the permittee can identify the cause(s) of the emergency;

b. The facility at the time was being properly operated;

c. During the period of the emergency, the permittee took all reasonable steps to minimize levels of emissions that exceeded the emissions standards or other requirements of the permit; and

d. The permittee submitted notice of the emergency to the director by certified mail within two working days of the time when the emissions limitations were exceeded due to the emergency. This notice fulfills the requirement of paragraph 22.108(5)b." – See G15. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof. This provision is in addition to any emergency or upset provision contained in any applicable requirement. 567 IAC 22.108(16)

G15. Permit Deviation Reporting Requirements
A deviation is any failure to meet a term, condition or applicable requirement in the permit. Reporting requirements for deviations that result in a hazardous release or excess emissions have been indicated above (see G13 and G14). Unless more frequent deviation reporting is specified in the permit, any other deviation shall be documented in the semi-annual monitoring report and the annual compliance certification (see G4 and G5). 567 IAC 22.108(5)b"

G16. Notification Requirements for Sources That Become Subject to NSPS and NESHAP Regulations
During the term of this permit, the permittee must notify the department of any source that becomes subject to a standard or other requirement under 567-subrule 23.1(2) (standards of
performance of new stationary sources) or section 111 of the Act; or 567-subrule 23.1(3)
(emissions standards for hazardous air pollutants), 567-subrule 23.1(4) (emission standards for
hazardous air pollutants for source categories) or section 112 of the Act. This notification shall
be submitted in writing to the department pursuant to the notification requirements in 40 CFR
Section 60.7, 40 CFR Section 61.07, and/or 40 CFR Section 63.9. 567 IAC 23.1(2), 567 IAC
23.1(3), 567 IAC 23.1(4)

G17. Requirements for Making Changes to Emission Sources That Do Not Require Title V
Permit Modification

1. Off Permit Changes to a Source. Pursuant to section 502(b)(10) of the CAAA, the permittee
may make changes to this installation/facility without revising this permit if:
   a. The changes are not major modifications under any provision of any program required
      by section 110 of the Act, modifications under section 111 of the act, modifications under
      section 112 of the act, or major modifications as defined in 567 IAC Chapter 22.
   b. The changes do not exceed the emissions allowable under the permit (whether
      expressed therein as a rate of emissions or in terms of total emissions);
   c. The changes are not modifications under any provisions of Title I of the Act and the
      changes do not exceed the emissions allowable under the permit (whether expressed
      therein as a rate of emissions or as total emissions);
   d. The changes are not subject to any requirement under Title IV of the Act (revisions
      affecting Title IV permitting are addressed in rules 567—22.140(455B) through 567 -
      22.144(455B)).
   e. The changes comply with all applicable requirements.
   f. For each such change, the permitted source provides to the department and the
      administrator by certified mail, at least 30 days in advance of the proposed change, a
      written notification, including the following, which must be attached to the permit by the
      source, the department and the administrator:
      i. A brief description of the change within the permitted facility,
      ii. The date on which the change will occur,
      iii. Any change in emission as a result of that change,
      iv. The pollutants emitted subject to the emissions trade
      v. If the emissions trading provisions of the state implementation plan are
         invoked, then Title V permit requirements with which the source shall comply; a
         description of how the emissions increases and decreases will comply with the
         terms and conditions of the Title V permit.
      vi. A description of the trading of emissions increases and decreases for the
          purpose of complying with a federally enforceable emissions cap as specified in
          and in compliance with the Title V permit; and
      vii. Any permit term or condition no longer applicable as a result of the change.
      567 IAC 22.110(1)

2. Such changes do not include changes that would violate applicable requirements or
   contravene federally enforceable permit terms and conditions that are monitoring (including test
   methods), record keeping, reporting, or compliance certification requirements. 567 IAC
   22.110(2)

3. Notwithstanding any other part of this rule, the director may, upon review of a notice, require
   a stationary source to apply for a Title V permit if the change does not meet the requirements of
   subrule 22.110(1). 567 IAC 22.110(3)
4. The permit shield provided in subrule 22.108(18) shall not apply to any change made pursuant to this rule. Compliance with the permit requirements that the source will meet using the emissions trade shall be determined according to requirements of the state implementation plan authorizing the emissions trade. 567 IAC 22.110(4)

5. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes, for changes that are provided for in this permit. 567 IAC 22.108(11)

**G18. Duty to Modify a Title V Permit**

1. **Administrative Amendment.**
   a. An administrative permit amendment is a permit revision that does any of the following:
      i. Correct typographical errors
      ii. Identify a change in the name, address, or telephone number of any person identified in the permit, or provides a similar minor administrative change at the source;
      iii. Require more frequent monitoring or reporting by the permittee; or
      iv. Allow for a change in ownership or operational control of a source where the director determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new permittee has been submitted to the director.
   b. The permittee may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request. The request shall be submitted to the director.
   c. Administrative amendments to portions of permits containing provisions pursuant to Title IV of the Act shall be governed by regulations promulgated by the administrator under Title IV of the Act.

2. **Minor Title V Permit Modification.**
   a. Minor Title V permit modification procedures may be used only for those permit modifications that satisfy all of the following:
      i. Do not violate any applicable requirement;
      ii. Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the Title V permit;
      iii. Do not require or change a case by case determination of an emission limitation or other standard, or an increment analysis;
      iv. Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed in order to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include any federally enforceable emissions caps which the source would assume to avoid classification as a modification under any provision under Title I of the Act; and an alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act;
      v. Are not modifications under any provision of Title I of the Act; and
      vi. Are not required to be processed as significant modification under rule 567 - 22.113(455B).
b. An application for minor permit revision shall be on the minor Title V modification application form and shall include at least the following:
   i. A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
   ii. The permittee's suggested draft permit;
   iii. Certification by a responsible official, pursuant to 567 IAC 22.107(4), that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
   iv. Completed forms to enable the department to notify the administrator and the affected states as required by 567 IAC 22.107(7).

c. The permittee may make the change proposed in its minor permit modification application immediately after it files the application. After the permittee makes this change and until the director takes any of the actions specified in 567 IAC 22.112(4) "a" to "c", the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time, the permittee need not comply with the existing permit terms and conditions it seeks to modify. However, if the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against the facility.

3. Significant Title V Permit Modification.
Significant Title V modification procedures shall be used for applications requesting Title V permit modifications that do not qualify as minor Title V modifications or as administrative amendments. These include but are not limited to all significant changes in monitoring permit terms, every relaxation of reporting or recordkeeping permit terms, and any change in the method of measuring compliance with existing requirements. Significant Title V modifications shall meet all requirements of 567 IAC Chapter 22, including those for applications, public participation, review by affected states, and review by the administrator, as those requirements that apply to Title V issuance and renewal.

The permittee shall submit an application for a significant permit modification not later than three months after commencing operation of the changed source unless the existing Title V permit would prohibit such construction or change in operation, in which event the operation of the changed source may not commence until the department revises the permit. 567 IAC 22.111-567 IAC 22.113

G19. Duty to Obtain Construction Permits
Unless exempted in 567 IAC 22.1(2) or to meet the parameters established in 567 IAC 22.1(1)"c", the permittee shall not construct, install, reconstruct or alter any equipment, control equipment or anaerobic lagoon without first obtaining a construction permit, or conditional permit, or permit pursuant to rule 567 IAC 22.8, or permits required pursuant to rules 567 IAC 22.4, 567 IAC 22.5, 567 IAC 31.3, and 567 IAC 33.3 as required in 567 IAC 22.1(1). A permit shall be obtained prior to the initiation of construction, installation or alteration of any portion of the stationary source or anaerobic lagoon. 567 IAC 22.1(1)

G20. Asbestos
The permittee shall comply with 567 IAC 23.1(3)"a", and 567 IAC 23.2(3)"g" when activities involve asbestos mills, surfacing of roadways, manufacturing operations, fabricating, insulating, waste disposal, spraying applications, demolition and renovation operations (567 IAC 23.1(3)"a"); training fires and controlled burning of a demolished building (567 IAC 23.2).
G21. Open Burning
The permittee is prohibited from conducting open burning, except as provided in 567 IAC 23.2. 567 IAC 23.2 except 23.2(3)"j"; 567 IAC 23.2(3)"j" - State Only

G22. Acid Rain (Title IV) Emissions Allowances
The permittee shall not exceed any allowances that it holds under Title IV of the Act or the regulations promulgated there under. Annual emissions of sulfur dioxide in excess of the number of allowances to emit sulfur dioxide held by the owners and operators of the unit or the designated representative of the owners and operators is prohibited. Exceedences of applicable emission rates are prohibited. “Held” in this context refers to both those allowances assigned to the owners and operators by USEPA, and those allowances supplementally acquired by the owners and operators. The use of any allowance prior to the year for which it was allocated is prohibited. Contravention of any other provision of the permit is prohibited. 567 IAC 22.108(7)

G23. Stratospheric Ozone and Climate Protection (Title VI) Requirements
1. The permittee shall comply with the standards for labeling of products using ozone-depleting substances pursuant to 40 CFR Part 82, Subpart E:
   a. All containers in which a class I or class II substance is stored or transported, all products containing a class I substance, and all products directly manufactured with a class I substance must bear the required warning statement if it is being introduced into interstate commerce pursuant to § 82.106.
   b. The placement of the required warning statement must comply with the requirements pursuant to § 82.108.
   c. The form of the label bearing the required warning statement must comply with the requirements pursuant to § 82.110.
   d. No person may modify, remove, or interfere with the required warning statement except as described in § 82.112.

2. The permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 CFR Part 82, Subpart F, except as provided for MVACs in Subpart B:
   a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to § 82.156.
   b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to § 82.158.
   c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to § 82.161.
   d. Persons disposing of small appliances, MVACs, and MVAC-like appliances must comply with reporting and recordkeeping requirements pursuant to § 82.166. ("MVAC-like appliance" as defined at § 82.152)
   e. Persons owning commercial or industrial process refrigeration equipment must comply with the leak repair requirements pursuant to § 82.156.
   f. Owners/operators of appliances normally containing 50 or more pounds of refrigerant must keep records of refrigerant purchased and added to such appliances pursuant to § 82.166.

3. If the permittee manufactures, transforms, imports, or exports a class I or class II substance, the permittee is subject to all the requirements as specified in 40 CFR part 82, Subpart A, Production and Consumption Controls.

4. If the permittee performs a service on motor (fleet) vehicles when this service involves ozone-depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air
conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term "MVAC" as used in Subpart B does not include the air-tight sealed refrigeration system used as refrigerated cargo, or system used on passenger buses using HCFC-22 refrigerant.

5. The permittee shall be allowed to switch from any ozone-depleting substance to any alternative that is listed in the Significant New Alternatives Program (SNAP) promulgated pursuant to 40 CFR part 82, Subpart G, Significant New Alternatives Policy Program. 40 CFR part 82

G24. Permit Reopenings

1. This permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. 567 IAC 22.108(9)"c"

2. Additional applicable requirements under the Act become applicable to a major part 70 source with a remaining permit term of 3 or more years. Revisions shall be made as expeditiously as practicable, but not later than 18 months after the promulgation of such standards and regulations.

   a. Reopening and revision on this ground is not required if the permit has a remaining term of less than three years;
   b. Reopening and revision on this ground is not required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions have been extended pursuant to 40 CFR 70.4(b)(10)(i) or (ii) as amended to May 15, 2001.
   c. Reopening and revision on this ground is not required if the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. 567 IAC 22.108(17)"a", 567 IAC 22.108(17)"b"

3. A permit shall be reopened and revised under any of the following circumstances:
   a. The department receives notice that the administrator has granted a petition for disapproval of a permit pursuant to 40 CFR 70.8(d) as amended to July 21, 1992, provided that the reopening may be stayed pending judicial review of that determination;
   b. The department or the administrator determines that the Title V permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the Title V permit;
   c. Additional applicable requirements under the Act become applicable to a Title V source, provided that the reopening on this ground is not required if the permit has a remaining term of less than three years, the effective date of the requirement is later than the date on which the permit is due to expire, or the additional applicable requirements are implemented in a general permit that is applicable to the source and the source receives approval for coverage under that general permit. Such a reopening shall be complete not later than 18 months after promulgation of the applicable requirement.
   d. Additional requirements, including excess emissions requirements, become applicable to a Title IV affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the
permit.
e. The department or the administrator determines that the permit must be revised or revoked to ensure compliance by the source with the applicable requirements. 567 IAC 22.114(1)

4. Proceedings to reopen and reissue a Title V permit shall follow the procedures applicable to initial permit issuance and shall effect only those parts of the permit for which cause to reopen exists. 567 IAC 22.114(2)

5. A notice of intent shall be provided to the Title V source at least 30 days in advance of the date the permit is to be reopened, except that the director may provide a shorter time period in the case of an emergency. 567 IAC 22.114(3)

G25. Permit Shield
1. The director may expressly include in a Title V permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:
   a. Such applicable requirements are included and are specifically identified in the permit; or
   b. The director, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

2. A Title V permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

3. A permit shield shall not alter or affect the following:
   a. The provisions of Section 303 of the Act (emergency orders), including the authority of the administrator under that section;
   b. The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
   c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the Act;
   d. The ability of the department or the administrator to obtain information from the facility pursuant to Section 114 of the Act. 567 IAC 22.108 (18)

G26. Severability
The provisions of this permit are severable and if any provision or application of any provision is found to be invalid by this department or a court of law, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected by such finding. 567 IAC 22.108 (8)

G27. Property Rights
The permit does not convey any property rights of any sort, or any exclusive privilege. 567 IAC 22.108 (9)"d"

G28. Transferability
This permit is not transferable from one source to another. If title to the facility or any part of it is transferred, an administrative amendment to the permit must be sought consistent with the requirements of 567 IAC 22.111(1). 567 IAC 22.111 (1)"d"

G29. Disclaimer
No review has been undertaken on the engineering aspects of the equipment or control equipment other than the potential of that equipment for reducing air contaminant emissions. 567 IAC 22.3(3)"c"
G30. Notification and Reporting Requirements for Stack Tests or Monitor Certification
The permittee shall notify the department's stack test contact in writing not less than 30 days before a required test or performance evaluation of a continuous emission monitor is performed to determine compliance with applicable requirements of 567 – Chapter 23 or a permit condition. Such notice shall include the time, the place, the name of the person who will conduct the test and other information as required by the department. If the owner or operator does not provide timely notice to the department, the department shall not consider the test results or performance evaluation results to be a valid demonstration of compliance with applicable rules or permit conditions. Upon written request, the department may allow a notification period of less than 30 days. At the department’s request, a pretest meeting shall be held not later than 15 days prior to conducting the compliance demonstration. A testing protocol shall be submitted to the department no later than 15 days before the owner or operator conducts the compliance demonstration. A representative of the department shall be permitted to witness the tests. Results of the tests shall be submitted in writing to the department's stack test contact in the form of a comprehensive report within six weeks of the completion of the testing. Compliance tests conducted pursuant to this permit shall be conducted with the source operating in a normal manner at its maximum continuous output as rated by the equipment manufacturer, or the rate specified by the owner as the maximum production rate at which the source shall be operated. In cases where compliance is to be demonstrated at less than the maximum continuous output as rated by the equipment manufacturer, and it is the owner's intent to limit the capacity to that rating, the owner may submit evidence to the department that the source has been physically altered so that capacity cannot be exceeded, or the department may require additional testing, continuous monitoring, reports of operating levels, or any other information deemed necessary by the department to determine whether such source is in compliance.
Stack test notifications, reports and correspondence shall be sent to:

Stack Test Review Coordinator
Iowa DNR, Air Quality Bureau
7900 Hickman Road, Suite #1
Windsor Heights, IA 50324
(515) 725-9545

Within Polk and Linn Counties, stack test notifications, reports and correspondence shall also be directed to the supervisor of the respective county air pollution program.

567 IAC 25.1(7) "a", 567 IAC 25.1(9)

G31. Prevention of Air Pollution Emergency Episodes
The permittee shall comply with the provisions of 567 IAC Chapter 26 in the prevention of excessive build-up of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these contaminants on the health of persons.

567 IAC 26.1(1)
G32. Contacts List

The current address and phone number for reports and notifications to the EPA administrator is:

Chief of Air Permits
U.S. EPA Region 7
Air Permits and Compliance Branch
11201 Renner Blvd.
Lenexa, KS 66219
(913) 551-7020

The current address and phone number for reports and notifications to the department or the Director is:

Chief, Air Quality Bureau
Iowa Department of Natural Resources
7900 Hickman Road, Suite #1
Windsor Heights, IA 50324
(515) 725-9500

Reports or notifications to the DNR Field Offices or local programs shall be directed to the supervisor at the appropriate field office or local program. Current addresses and phone numbers are:

**Field Office 1**
909 West Main – Suite 4
Manchester, IA 52057
(563) 927-2640

**Field Office 2**
2300-15th St., SW
Mason City, IA 50401
(641) 424-4073

**Field Office 3**
1900 N. Grand Ave.
Spencer, IA 51301
(712) 262-4177

**Field Office 4**
1401 Sunnyside Lane
Atlantic, IA 50022
(712) 243-1934

**Field Office 5**
7900 Hickman Road, Suite #200
Windsor Heights, IA 50324
(515) 725-0268

**Field Office 6**
1023 West Madison Street
Washington, IA 52353-1623
(319) 653-2135

**Polk County Public Works Dept.**
Air Quality Division
5885 NE 14th St.
Des Moines, IA 50313
(515) 286-3351

**Linn County Public Health**
Air Quality Branch
501 13th St., NW
Cedar Rapids, IA 52405
(319) 892-6000

G. 40 CFR 63 Subpart UUUUU – National Emission Standards for Hazardous Air Pollutants from Coal and Oil-fired Electric Utility Steam Generating Units (EGU-MATS)
   http://www.ecfr.gov/cgi-bin/retrieveECFR?gp=&r=SUBPART&n=sp40.15.63.uuuuu
Acid Rain Permit comprises the following:

1) Statement of Basis.

2) SO₂ allowances allocated under this permit and NOₓ requirements for each affected unit.

3) Comments, notes and justifications regarding permit decisions and changes made to the permit application forms during the review process, and any additional requirements or conditions.

4) The permit application submitted for this source, as corrected by the Iowa Department of Natural Resources (IDNR), Air Quality Bureau, Operating Permit Section. The owners and operators of the source must comply with the standard requirements and special provisions set forth in the application.

1) Statement of Basis

Statutory and Regulatory Authorities: In accordance with Iowa Code paragraph 455B.133[8"a"], and Titles IV and V of the Clean Air Act, the Iowa Department of Natural Resources (IDNR), Air Quality Bureau, Operating Permit Section issues this permit pursuant to 567 Iowa Administrative Code (IAC) 22.135(455B) to 22.145(455B) and 567 IAC 22.100(455B) to 22.116(455B). The compliance options are approved as proposed in the attached application.

2) SO₂ Allowance Allocations and NOₓ Requirements for each affected unit
Unit 8

SO₂ allowances, under Table 2 of 40 CFR part 73.

Pursuant to 40 CFR part 76, The Iowa Department of Natural Resources approves a standard emission limitation compliance plan for Unit 9. The NOₓ compliance plan is effective beginning 11/3/2015 through 11/2/2020. Under the NOₓ compliance plan, this unit’s annual average NOₓ emission rate for each year, determined in accordance with 40 CFR part 75, shall not exceed the applicable emission limitation under 40 CFR 76.7(a)(1), which is 0.40 lbs/mmBtu for tangentially fired units.

In addition to the described NOₓ compliance plan, this unit shall comply with all other applicable requirements of 40 CFR part 76, including the duty to reapply for a NOₓ compliance plan and the requirements covering excess emissions.

* The number of allowances allocated to Phase II affected units by U.S. EPA in 40 CFR part 73 Table 2 (Revised May 12, 2005). In addition, the number of allowances actually held by an affected source in a unit account may differ from the number allocated by U.S. EPA. Neither of the aforementioned conditions necessitate a revision to the unit SO₂ allowance allocations identified in this permit (See 40 CFR 72.84).

3) Comments, Notes and Justifications:

Renewal of the Phase II SO₂ and NOₓ permit.

4) Permit Application: Attached.

#### State: IA

Plant Code: 1167
Permit Requirements

(1) The designated representative of each affected source and each affected unit at the source shall:
   (i) Submit a complete Acid Rain permit application (including a compliance plan) under 40 CFR part 72 in accordance with the deadlines specified in 40 CFR 72.30; and
   (ii) Submit in a timely manner any supplemental information that the permitting authority determines is necessary in order to review an Acid Rain permit application and issue or deny an Acid Rain permit;

(2) The owners and operators of each affected source and each affected unit at the source shall:
   (i) Operate the unit in compliance with a complete Acid Rain permit application or a superseding Acid Rain permit issued by the permitting authority; and
   (ii) Have an Acid Rain Permit.

Monitoring Requirements

(1) The owners and operators and, to the extent applicable, designated representative of each affected source and each affected unit at the source shall comply with the monitoring requirements as provided in 40 CFR part 75.

(2) The emissions measurements recorded and reported in accordance with 40 CFR part 75 shall be used to determine compliance by the source or unit, as appropriate, with the Acid Rain emissions limitations and emissions reduction requirements for sulfur dioxide and nitrogen oxides under the Acid Rain Program.

(3) The requirements of 40 CFR part 75 shall not affect the responsibility of the owners and operators to monitor emissions of other pollutants or other emissions characteristics at the unit under other applicable requirements of the Act and other provisions of the operating permit for the source.

Sulfur Dioxide Requirements

(1) The owners and operators of each source and each affected unit at the source shall:
   (i) Hold allowances, as of the allowance transfer deadline, in the source’s compliance account (after deductions under 40 CFR 73.34(c)), not less than the total annual emissions of sulfur dioxide for the previous calendar year from the affected units at the source; and
   (ii) Comply with the applicable Acid Rain emissions limitations for sulfur dioxide.

(2) Each ton of sulfur dioxide emitted in excess of the Acid Rain emissions limitations for sulfur dioxide shall constitute a separate violation of the Act.

(3) An affected unit shall be subject to the requirements under paragraph (1) of the sulfur dioxide requirements as follows:
   (i) Starting January 1, 2000, an affected unit under 40 CFR 72.6(a)(2); or
   (ii) Starting on the later of January 1, 2000 or the deadline for monitor certification under 40 CFR part 75, an affected unit under 40 CFR 72.6(a)(3).
Sulfur Dioxide Requirements, Cont'd.

(4) Allowances shall be held in, deducted from, or transferred among Allowance Tracking System accounts in accordance with the Acid Rain Program.
(5) An allowance shall not be deducted in order to comply with the requirements under paragraph (1) of the sulfur dioxide requirements prior to the calendar year for which the allowance was allocated.
(6) An allowance allocated by the Administrator under the Acid Rain Program is a limited authorization to emit sulfur dioxide in accordance with the Acid Rain Program. No provision of the Acid Rain Program, the Acid Rain permit application, the Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8 and no provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization.
(7) An allowance allocated by the Administrator under the Acid Rain Program does not constitute a property right.

Nitrogen Oxides Requirements

The owners and operators of the source and each affected unit at the source shall comply with the applicable Acid Rain emissions limitation for nitrogen oxides.

Excess Emissions Requirements

(1) The designated representative of an affected source that has excess emissions in any calendar year shall submit a proposed offset plan, as required under 40 CFR part 77.
(2) The owners and operators of an affected source that has excess emissions in any calendar year shall:
   (i) Pay without demand the penalty required, and pay upon demand the interest on that penalty, as required by 40 CFR part 77; and
   (ii) Comply with the terms of an approved offset plan, as required by 40 CFR part 77.

Recordkeeping and Reporting Requirements

(1) Unless otherwise provided, the owners and operators of the source and each affected unit at the source shall keep on site at the source each of the following documents for a period of 5 years from the date the document is created. This period may be extended for cause, at any time prior to the end of 5 years, in writing by the Administrator or permitting authority:
   (i) The certificate of representation for the designated representative for the source and each affected unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation, in accordance with 40 CFR 72.24; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such documents are superseded because of the
Submission of a new certificate of representation changing the designated representative;

Recordkeeping and Reporting Requirements, Cont'd.

(ii) All emissions monitoring information, in accordance with 40 CFR part 75, provided that to the extent that 40 CFR part 75 provides for a 3-year period for recordkeeping, the 3-year period shall apply.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the Acid Rain Program; and,

(iv) Copies of all documents used to complete an Acid Rain permit application and any other submission under the Acid Rain Program or to demonstrate compliance with the requirements of the Acid Rain Program.

(2) The designated representative of an affected source and each affected unit at the source shall submit the reports and compliance certifications required under the Acid Rain Program, including those under 40 CFR part 72 subpart I and 40 CFR part 75.

Liability

(1) Any person who knowingly violates any requirement or prohibition of the Acid Rain Program, a complete Acid Rain permit application, an Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8, including any requirement for the payment of any penalty owed to the United States, shall be subject to enforcement pursuant to section 113(c) of the Act.

(2) Any person who knowingly makes a false, material statement in any record, submission, or report under the Acid Rain Program shall be subject to criminal enforcement pursuant to section 113(c) of the Act and 18 U.S.C. 1001.

(3) No permit revision shall excuse any violation of the requirements of the Acid Rain Program that occurs prior to the date that the revision takes effect.

(4) Each affected source and each affected unit shall meet the requirements of the Acid Rain Program.

(5) Any provision of the Acid Rain Program that applies to an affected source (including a provision applicable to the designated representative of an affected source) shall also apply to the owners and operators of such source and of the affected units at the source.

(6) Any provision of the Acid Rain Program that applies to an affected unit (including a provision applicable to the designated representative of an affected unit) shall also apply to the owners and operators of such unit.

(7) Each violation of a provision of 40 CFR parts 72, 73, 74, 75, 76, 77, and 78 by an affected source or affected unit, or by an owner or operator or designated representative of such source or unit, shall be a separate violation of the Act.

Effect on Other Authorities

No provision of the Acid Rain Program, an Acid Rain permit application, an Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8 shall be construed as:
(1) Except as expressly provided in title IV of the Act, exempting or excluding the owners and operators and, to the extent applicable, the designated representative of an affected source or affected unit from compliance with any other provision of the Act, including the provisions of title I of the Act relating to applicable National Ambient Air Quality Standards or State Implementation Plans;

(2) Limiting the number of allowances a source can hold; provided, that the number of allowances held by the source shall not affect the source's obligation to comply with any other provisions of the Act;

(3) Requiring a change of any kind in any State law regulating electric utility rates and charges, affecting any State law regarding such State regulation, or limiting such State regulation, including any prudence review requirements under such State law;

(4) Modifying the Federal Power Act or affecting the authority of the Federal Energy Regulatory Commission under the Federal Power Act; or,

(5) Interfering with or impairing any program for competitive bidding for power supply in a State in which such program is established.

**Certification**

I am authorized to make this submission on behalf of the owners and operators of the affected source or affected units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.

**STEP 1**
Indicate plant name, State, and Plant code from the current Certificate of Representation covering the facility.

**STEP 2**
Identify each affected Group 1 and Group 2 boiler using the unit IDs from the current Certificate of Representation covering the facility. Also indicate the boiler type: "CB" for cell burner, "CY" for cyclone, "DBW" for dry bottom wall-fired, "T" for tangentially fired, "V" for vertically fired, and "WB" for wet bottom, and select the compliance option for each unit by making an 'X' in the appropriate row and column.

1. The above description of the monitoring used by a unit does not change, create an exemption from, or otherwise affect the monitoring, recordkeeping, and reporting requirements applicable to the unit under 40 CFR 97.430 through 97.435 (TR NOX Annual Trading Program), 97.530 through 97.535 (TR NOX Ozone Season Trading Program), and 97.630 through 97.635 (TR SO2 Group 1 Trading Program). The monitoring, recordkeeping and reporting requirements applicable to each unit are included below in the standard conditions for the applicable TR trading programs.

2. Owners and operators must submit to the Administrator a monitoring plan for each unit in accordance with 40 CFR 75.53, 75.62 and 75.73, as applicable. The monitoring plan for each unit is available at the EPA’s website at http://www.epa.gov/airmarkets/emissions/monitoringplans.html.

3. Owners and operators that want to use an alternative monitoring system must submit to the Administrator a petition requesting approval of the alternative monitoring system in accordance with 40 CFR part 75, subpart E and 40 CFR 75.66 and 97.435 (TR NOX Annual Trading Program), 97.535 (TR NOX Ozone Season Trading Program) and/or 97.635 (TR SO2 Group 1 Trading Program). The Administrator’s response approving or disapproving any petition for an alternative monitoring system is available on the EPA’s website at http://www.epa.gov/airmarkets/emissions/petitions.html.

4. Owners and operators that want to use an alternative to any monitoring, recordkeeping, or reporting requirement under 40 CFR 97.430 through 97.434 (TR NOX Annual Trading Program), 97.530 through 97.534 (TR NOX Ozone Season Trading Program) and/or 97.630 through 97.634 (TR SO2 Group 1 Trading Program) must submit to the Administrator a petition requesting approval of the alternative in accordance with 40 CFR 75.66 and 97.435 (TR NOX Annual Trading Program), 97.535 (TR NOX Ozone Season Trading Program) and/or 97.635 (TR SO2 Group 1 Trading Program). The Administrator’s response approving or disapproving any petition for an alternative to a monitoring, recordkeeping, or reporting requirement is available on EPA’s website at http://www.epa.gov/airmarkets/emissions/petitions.html.

5. The descriptions of monitoring applicable to the unit included above meet the requirement of 40 CFR 97.430 through 97.434 (TR NOX Annual Trading Program), 97.530 through 97.534 (TR NOX Ozone Season Trading Program) and 97.630 through 97.634 (TR SO2 Group 1 Trading Program), and therefore minor permit modification procedures, in accordance with 40 CFR 70.7(e)(2)(i)(B) or 71.7(e)(1)(i)(B), may be used to add to or change this unit’s monitoring system description.

**TR NOX Annual Trading Program requirements (40 CFR 97.406)**

(a) Designated representative requirements.

The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with 40 CFR 97.413 through 97.418.

(b) Emissions monitoring, reporting, and recordkeeping requirements.

(1) The owners and operators, and the designated representative, of each TR NOX Annual source and each TR NOX Annual unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of 40 CFR 97.430 (general requirements, including installation, certification, and data accounting, compliance deadlines, reporting data, prohibitions, and long-term cold storage), 97.431 (initial monitoring system certification and recertification procedures), 97.432 (monitoring system out-of-control periods), 97.433 (notifications concerning monitoring), 97.434 (recordkeeping and reporting, including monitoring plans, certification applications, quarterly reports, and compliance certification), and 97.435 (petitions for alternatives to monitoring, recordkeeping, or reporting requirements).
The emissions data determined in accordance with 40 CFR 97.430 through 97.435 shall be used to calculate allocations of TR NOX Annual allowances under 40 CFR 97.411(a)(2) and (b) and 97.412 and to determine compliance with the TR NOX Annual emissions limitation and assurance provisions under paragraph (c) below, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with 40 CFR 97.430 through 97.435 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) NOX emissions requirements.

(1) TR NOX Annual emissions limitation.

(i). As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR NOX Annual source and each TR NOX Annual unit at the source shall hold, in the source's compliance account, TR NOX Annual allowances available for deduction for such control period under 40 CFR 97.424(a) in an amount not less than the tons of total NOX emissions for such control period from all TR NOX Annual units at the source.

(ii). If total NOX emissions during a control period in a given year from the TR NOX Annual units at a TR NOX Annual source are in excess of the TR NOX Annual emissions limitation set forth in paragraph (c)(1)(i) above, then:

(A). The owners and operators of the source and each TR NOX Annual unit at the source shall hold the TR NOX Annual allowances required for deduction under 40 CFR 97.424(d); and

(B). The owners and operators of the source and each TR NOX Annual unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of 40 CFR part 97, subpart AAAAA and the Clean Air Act.

(2) TR NOX Annual assurance provisions.

(i). If total NOX emissions during a control period in a given year from all TR NOX Annual units at TR NOX Annual sources in the state exceed the state assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative’s share of such NOX emissions during such control period exceeds the common designated representative’s assurance level for the state and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR NOX Annual allowances available for deduction for such control period under 40 CFR 97.425(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with 40 CFR 97.425(b), of multiplying— (A) The quotient of the amount by which the common designated representative’s share of such NOX emissions exceeds the common designated representative’s assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the state for such control period, by which each common designated representative’s share of such NOX emissions exceeds the respective common designated representative’s assurance level; and (B) The amount by which total NOX emissions from all TR NOX Annual units at TR NOX Annual sources in the state for such control period exceed the state assurance level.

(ii). The owners and operators shall hold the TR NOX Annual allowances required under paragraph (c)(2)(i) above, as of midnight of November 1 (if it is a business day), or
midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii). Total NOX emissions from all TR NOX Annual units at TR NOX Annual sources in the State during a control period in a given year exceed the state assurance level if such total NOX emissions exceed the sum, for such control period, of the state NOX Annual trading budget under 40 CFR 97.410(a) and the state’s variability limit under 40 CFR 97.410(b).

(iv). It shall not be a violation of 40 CFR part 97, subpart AAAAA or of the Clean Air Act if total NOX emissions from all TR NOX Annual units at TR NOX Annual sources in the State during a control period exceed the state assurance level.

(v). To the extent the owners and operators fail to hold TR NOX Annual allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) above, (A). The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B). Each TR NOX Annual allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) above and each day of such control period shall constitute a separate violation of 40 CFR part 97, subpart AAAAA and the Clean Air Act.

(3) Compliance periods.

(i). A TR NOX Annual unit shall be subject to the requirements under paragraph (c)(1) above for the control period starting on the later of January 1, 2015, or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.430(b) and for each control period thereafter.

(ii). A TR NOX Annual unit shall be subject to the requirements under paragraph (c)(2) above for the control period starting on the later of January 1, 2017 or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.430(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance.

(i). A TR NOX Annual allowance held for compliance with the requirements under paragraph (c)(1)(i) above for a control period in a given year must be a TR NOX Annual allowance that was allocated for such control period or a control period in a prior year.

(ii). A TR NOX Annual allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) above for a control period in a given year must be a TR NOX Annual allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR NOX Annual allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with 40 CFR part 97, subpart AAAAA.

(6) Limited authorization. A TR NOX Annual allowance is a limited authorization to emit one ton of NOX during the control period in one year. Such authorization is limited in its use and duration as follows:

(i). Such authorization shall only be used in accordance with the TR NOX Annual Trading Program; and

(ii). Notwithstanding any other provision of 40 CFR part 97, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.
(7) Property right. A TR NOX Annual allowance does not constitute a property right.

(d) Title V permit revision requirements.
(1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR NOX Annual allowances in accordance with 40 CFR part 97, subpart AAAAA.

(2) This permit incorporates the TR emissions monitoring, recordkeeping and reporting requirements pursuant to 40 CFR 97.430 through 97.435, and the requirements for a continuous emission monitoring system (pursuant to 40 CFR part 75, subparts B and H), an excepted monitoring system (pursuant to 40 CFR part 75, appendices D and E), a low mass emissions excepted monitoring methodology (pursuant to 40 CFR 75.19), and an alternative monitoring system (pursuant to 40 CFR part 75, subpart E). Therefore, the Description of TR Monitoring Provisions table for units identified in this permit may be added to, or changed, in this title V permit using minor permit modification procedures in accordance with 40 CFR 97.406(d)(2) and 70.7(e)(2)(i)(B) or 71.7(e)(1)(i)(B).

(e) Additional recordkeeping and reporting requirements.
(1) Unless otherwise provided, the owners and operators of each TR NOX Annual source and each TR NOX Annual unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i). The certificate of representation under 40 CFR 97.416 for the designated representative for the source and each TR NOX Annual unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under 40 CFR 97.416 changing the designated representative.

(ii). All emissions monitoring information, in accordance with 40 CFR part 97, subpart AAAAA.

(iii). Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR NOX Annual Trading Program.

(2) The designated representative of a TR NOX Annual source and each TR NOX Annual unit at the source shall make all submissions required under the TR NOX Annual Trading Program, except as provided in 40 CFR 97.418. This requirement does not change, create an exemption from, or otherwise affect the responsible official submission requirements under a title V operating permit program in 40 CFR parts 70 and 71.

(f) Liability.
(1) Any provision of the TR NOX Annual Trading Program that applies to a TR NOX Annual source or the designated representative of a TR NOX Annual source shall also apply to the owners and operators of such source and of the TR NOX Annual units at the source.

(2) Any provision of the TR NOX Annual Trading Program that applies to a TR NOX Annual unit or the designated representative of a TR NOX Annual unit shall also apply to the owners and operators of such unit.

(g) Effect on other authorities.
No provision of the TR NOX Annual Trading Program or exemption under 40 CFR 97.405 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR NOX Annual source or TR NOX Annual unit from compliance with any other provision of the applicable, approved state implementation plan, a federally enforceable permit, or the Clean Air Act.
TR NOx Ozone Season Trading Program Requirements (40 CFR 97.506)

(a) Designated representative requirements.

The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with 40 CFR 97.513 through 97.518.

(b) Emissions monitoring, reporting, and recordkeeping requirements.

(1) The owners and operators, and the designated representative, of each TR NOx Ozone Season source and each TR NOx Ozone Season unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of 40 CFR 97.530 (general requirements, including installation, certification, and data accounting, compliance deadlines, reporting data, prohibitions, and long-term cold storage), 97.531 (initial monitoring system certification and recertification procedures), 97.532 (monitoring system out-of-control periods), 97.533 (notifications concerning monitoring), 97.534 (recordkeeping and reporting, including monitoring plans, certification applications, quarterly reports, and compliance certification), and 97.535 (petitions for alternatives to monitoring, recordkeeping, or reporting requirements).

(2) The emissions data determined in accordance with 40 CFR 97.530 through 97.535 shall be used to calculate allocations of TR NOx Ozone Season allowances under 40 CFR 97.511(a)(2) and (b) and 97.512 and to determine compliance with the TR NOx Ozone Season emissions limitation and assurance provisions under paragraph (c) below, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with 40 CFR 97.530 through 97.535 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) NOx emissions requirements.

(1) TR NOx Ozone Season emissions limitation.

(i). As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR NOx Ozone Season source and each TR NOx Ozone Season unit at the source shall hold, in the source's compliance account, TR NOx Ozone Season allowances available for deduction for such control period under 40 CFR 97.524(a) in an amount not less than the tons of total NOx emissions for such control period from all TR NOx Ozone Season units at the source.

(ii). If total NOx emissions during a control period in a given year from the TR NOx Ozone Season units at a TR NOx Ozone Season source are in excess of the TR NOx Ozone Season emissions limitation set forth in paragraph (c)(1)(i) above, then:

(A). The owners and operators of the source and each TR NOx Ozone Season unit at the source shall hold the TR NOx Ozone Season allowances required for deduction under 40 CFR 97.524(d); and

(B). The owners and operators of the source and each TR NOx Ozone Season unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of 40 CFR part 97, subpart BBBBB and the Clean Air Act.

(2) TR NOx Ozone Season assurance provisions.

(i). If total NOx emissions during a control period in a given year from all TR NOx Ozone Season units at TR NOx Ozone Season sources in the state exceed the state assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative’s share of such NOx emissions during such control period exceeds the common designated representative’s assurance level for the state
and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR NOx Ozone Season allowances available for deduction for such control period under 40 CFR 97.525(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with 40 CFR 97.525(b), of multiplying—

(A). The quotient of the amount by which the common designated representative’s share of such NOx emissions exceeds the common designated representative’s assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the state for such control period, by which each common designated representative’s share of such NOx emissions exceeds the respective common designated representative’s assurance level; and

(B). The amount by which total NOx emissions from all TR NOx Ozone Season units at TR NOx Ozone Season sources in the state for such control period exceed the state assurance level.

(ii). The owners and operators shall hold the TR NOx Ozone Season allowances required under paragraph (c)(2)(i) above, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii). Total NOx emissions from all TR NOx Ozone Season units at TR NOx Ozone Season sources in the state during a control period in a given year exceed the state assurance level if such total NOx emissions exceed the sum, for such control period, of the State NOx Ozone Season trading budget under 40 CFR 97.510(a) and the state’s variability limit under 40 CFR 97.510(b).

(iv). It shall not be a violation of 40 CFR part 97, subpart BBBBB or of the Clean Air Act if total NOx emissions from all TR NOx Ozone Season units at TR NOx Ozone Season sources in the state during a control period exceed the state assurance level or if a common designated representative’s share of total NOx emissions from the TR NOx Ozone Season units at TR NOx Ozone Season sources in the state during a control period exceeds the common designated representative’s assurance level.

(v). To the extent the owners and operators fail to hold TR NOx Ozone Season allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) above,

(A). The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B). Each TR NOx Ozone Season allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) above and each day of such control period shall constitute a separate violation of 40 CFR part 97, subpart BBBBB and the Clean Air Act.

(3) Compliance periods.

(i). A TR NOx Ozone Season unit shall be subject to the requirements under paragraph (c)(1) above for the control period starting on the later of May 1, 2015 or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.530(b) and for each control period thereafter.

(ii). A TR NOx Ozone Season unit shall be subject to the requirements under paragraph (c)(2) above for the control period starting on the later of May 1, 2017 or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.530(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance.

(i). A TR NOx Ozone Season allowance held for compliance with the requirements under paragraph (c)(1)(i) above for a control period in a given year must be a TR NOx Ozone
Season allowance that was allocated for such control period or a control period in a prior year.

(ii). A TR NOX Ozone Season allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) above for a control period in a given year must be a TR NOX Ozone Season allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR NOX Ozone Season allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with 40 CFR part 97, subpart BBBBB.

(6) Limited authorization. A TR NOX Ozone Season allowance is a limited authorization to emit one ton of NOX during the control period in one year. Such authorization is limited in its use and duration as follows:

(i). Such authorization shall only be used in accordance with the TR NOX Ozone Season Trading Program; and

(ii). Notwithstanding any other provision of 40 CFR part 97, subpart BBBBB, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR NOX Ozone Season allowance does not constitute a property right.

(d) Title V permit revision requirements.

(1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR NOX Ozone Season allowances in accordance with 40 CFR part 97, subpart BBBBB.

(2) This permit incorporates the TR emissions monitoring, recordkeeping and reporting requirements pursuant to 40 CFR 97.530 through 97.535, and the requirements for a continuous emission monitoring system (pursuant to 40 CFR part 75, subparts B and H), an excepted monitoring system (pursuant to 40 CFR part 75, appendices D and E), a low mass emissions excepted monitoring methodology (pursuant to 40 CFR 75.19), and an alternative monitoring system (pursuant to 40 CFR part 75, subpart E). Therefore, the Description of TR Monitoring Provisions table for units identified in this permit may be added to, or changed, in this title V permit using minor permit modification procedures in accordance with 40 CFR 97.506(d)(2) and 70.7(e)(2)(i)(B) or 71.7(e)(1)(i)(B).

(e) Additional recordkeeping and reporting requirements.

(1) Unless otherwise provided, the owners and operators of each TR NOX Ozone Season source and each TR NOX Ozone Season unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i). The certificate of representation under 40 CFR 97.516 for the designated representative for the source and each TR NOX Ozone Season unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under 40 CFR 97.516 changing the designated representative.

(ii). All emissions monitoring information, in accordance with 40 CFR part 97, subpart BBBBB.

(iii). Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR NOX Ozone Season Trading Program.
(2) The designated representative of a TR NOx Ozone Season source and each TR NOx Ozone Season unit at the source shall make all submissions required under the TR NOx Ozone Season Trading Program, except as provided in 40 CFR 97.518. This requirement does not change, create an exemption from, or otherwise affect the responsible official submission requirements under a title V operating permit program in 40 CFR parts 70 and 71.

(f) Liability.
(1) Any provision of the TR NOx Ozone Season Trading Program that applies to a TR NOx Ozone Season source or the designated representative of a TR NOx Ozone Season source shall also apply to the owners and operators of such source and of the TR NOx Ozone Season units at the source.
(2) Any provision of the TR NOx Ozone Season Trading Program that applies to a TR NOx Ozone Season unit or the designated representative of a TR NOx Ozone Season unit shall also apply to the owners and operators of such unit.

(g) Effect on other authorities.
No provision of the TR NOx Ozone Season Trading Program or exemption under 40 CFR 97.505 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR NOx Ozone Season source or TR NOx Ozone Season unit from compliance with any other provision of the applicable, approved state implementation plan, a federally enforceable permit, or the Clean Air Act.

TR SO2 Group 1 Trading Program requirements (40 CFR 97.606)

(a) Designated representative requirements.
The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with 40 CFR 97.613 through 97.618.

(b) Emissions monitoring, reporting, and recordkeeping requirements.
(1) The owners and operators, and the designated representative, of each TR SO2 Group 1 source and each TR SO2 Group 1 unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of 40 CFR 97.630 (general requirements, including installation, certification, and data accounting, compliance deadlines, reporting data, prohibitions, and long-term cold storage), 97.631 (initial monitoring system certification and recertification procedures), 97.632 (monitoring system out-of-control periods), 97.633 (notifications concerning monitoring), 97.634 (recordkeeping and reporting, including monitoring plans, certification applications, quarterly reports, and compliance certification), and 97.635 (petitions for alternatives to monitoring, recordkeeping, or reporting requirements).
(2) The emissions data determined in accordance with 40 CFR 97.630 through 97.635 shall be used to calculate allocations of TR SO2 Group 1 allowances under 40 CFR 97.611(a)(2) and (b) and 97.612 and to determine compliance with the TR SO2 Group 1 emissions limitation and assurance provisions under paragraph (c) below, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with 40 CFR 97.630 through 97.635 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) SO2 emissions requirements.
(1) TR SO2 Group 1 emissions limitation.
(i) As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR SO2 Group 1 source and each TR SO2 Group 1 unit at the source shall hold, in the source's compliance account, TR SO2 Group 1 allowances available for deduction for such control period under 40 CFR 97.624(a) in an amount not less than the
tons of total SO\textsubscript{2} emissions for such control period from all TR SO\textsubscript{2} Group 1 units at the source.

(ii). If total SO\textsubscript{2} emissions during a control period in a given year from the TR SO\textsubscript{2} Group 1 units at a TR SO\textsubscript{2} Group 1 source are in excess of the TR SO\textsubscript{2} Group 1 emissions limitation set forth in paragraph (c)(1)(i) above, then:

(A). The owners and operators of the source and each TR SO\textsubscript{2} Group 1 unit at the source shall hold the TR SO\textsubscript{2} Group 1 allowances required for deduction under 40 CFR 97.624(d); and

(B). The owners and operators of the source and each TR SO\textsubscript{2} Group 1 unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation 40 CFR part 97, subpart CCCCC and the Clean Air Act.

(2) TR SO\textsubscript{2} Group 1 assurance provisions.

(i). If total SO\textsubscript{2} emissions during a control period in a given year from all TR SO\textsubscript{2} Group 1 units at TR SO\textsubscript{2} Group 1 sources in the state exceed the state assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative’s share of such SO\textsubscript{2} emissions during such control period exceeds the common designated representative’s assurance level for the state and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR SO\textsubscript{2} Group 1 allowances available for deduction for such control period under 40 CFR 97.625(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with 40 CFR 97.625(b), of multiplying—

(A). The quotient of the amount by which the common designated representative’s share of such SO\textsubscript{2} emissions exceeds the common designated representative’s assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the state for such control period, by which each common designated representative’s share of such SO\textsubscript{2} emissions exceeds the respective common designated representative’s assurance level; and

(B). The amount by which total SO\textsubscript{2} emissions from all TR SO\textsubscript{2} Group 1 units at TR SO\textsubscript{2} Group 1 sources in the state for such control period exceed the state assurance level.

(ii). The owners and operators shall hold the TR SO\textsubscript{2} Group 1 allowances required under paragraph (c)(2)(i) above, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii). Total SO\textsubscript{2} emissions from all TR SO\textsubscript{2} Group 1 units at TR SO\textsubscript{2} Group 1 sources in the state during a control period in a given year exceed the state assurance level if such total SO\textsubscript{2} emissions exceed the sum, for such control period, of the state SO\textsubscript{2} Group 1 trading budget under 40 CFR 97.610(a) and the state’s variability limit under 40 CFR 97.610(b).

(iv). It shall not be a violation of 40 CFR part 97, subpart CCCCC or of the Clean Air Act if total SO\textsubscript{2} emissions from all TR SO\textsubscript{2} Group 1 units at TR SO\textsubscript{2} Group 1 sources in the state during a control period exceed the state assurance level or if a common designated representative’s share of total SO\textsubscript{2} emissions from the TR SO\textsubscript{2} Group 1 units at TR SO\textsubscript{2} Group 1 sources in the state during a control period exceeds the common designated representative’s assurance level.

(v). To the extent the owners and operators fail to hold TR SO\textsubscript{2} Group 1 allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) above,
(A) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B) Each TR SO₂ Group 1 allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) above and each day of such control period shall constitute a separate violation of 40 CFR part 97, subpart CCCCC and the Clean Air Act.

(3) Compliance periods.
   (i) A TR SO₂ Group 1 unit shall be subject to the requirements under paragraph (c)(1) above for the control period starting on the later of January 1, 2015 or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.630(b) and for each control period thereafter.
   (ii) A TR SO₂ Group 1 unit shall be subject to the requirements under paragraph (c)(2) above for the control period starting on the later of January 1, 2017 or the deadline for meeting the unit's monitor certification requirements under 40 CFR 97.630(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance.
   (i) A TR SO₂ Group 1 allowance held for compliance with the requirements under paragraph (c)(1)(i) above for a control period in a given year must be a TR SO₂ Group 1 allowance that was allocated for such control period or a control period in a prior year.
   (ii) A TR SO₂ Group 1 allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) above for a control period in a given year must be a TR SO₂ Group 1 allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR SO₂ Group 1 allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with 40 CFR part 97, subpart CCCCC.

(6) Limited authorization. A TR SO₂ Group 1 allowance is a limited authorization to emit one ton of SO₂ during the control period in one year. Such authorization is limited in its use and duration as follows:
   (i) Such authorization shall only be used in accordance with the TR SO₂ Group 1 Trading Program; and
   (ii) Notwithstanding any other provision of 40 CFR part 97, subpart CCCCC, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR SO₂ Group 1 allowance does not constitute a property right.

(d) Title V permit revision requirements.
   (1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR SO₂ Group 1 allowances in accordance with 40 CFR part 97, subpart CCCCC.
   (2) This permit incorporates the TR emissions monitoring, recordkeeping and reporting requirements pursuant to 40 CFR 97.630 through 97.635, and the requirements for a continuous emission monitoring system (pursuant to 40 CFR part 75, subparts B and H), an excepted monitoring system (pursuant to 40 CFR part 75, appendices D and E), a low mass emissions excepted monitoring methodology (pursuant to 40 CFR part 75.19), and an alternative monitoring system (pursuant to 40 CFR part 75, subpart E). Therefore, the Description of TR Monitoring Provisions table for units identified in this permit may be added to, or changed, in this title V permit using minor permit modification procedures in accordance with 40 CFR 97.606(d)(2) and 70.7(e)(2)(i)(B) or 71.7(e)(1)(i)(B).
(e) Additional recordkeeping and reporting requirements.

(1) Unless otherwise provided, the owners and operators of each TR SO₂ Group 1 source and each TR SO₂ Group 1 unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i). The certificate of representation under 40 CFR 97.616 for the designated representative for the source and each TR SO₂ Group 1 unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under 40 CFR 97.616 changing the designated representative.

(ii). All emissions monitoring information, in accordance with 40 CFR part 97, subpart CCCCC.

(iii). Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR SO₂ Group 1 Trading Program.

(2) The designated representative of a TR SO₂ Group 1 source and each TR SO₂ Group 1 unit at the source shall make all submissions required under the TR SO₂ Group 1 Trading Program, except as provided in 40 CFR 97.618. This requirement does not change, create an exemption from, or otherwise affect the responsible official submission requirements under a title V operating permit program in 40 CFR parts 70 and 71.

(f) Liability.

(1) Any provision of the TR SO₂ Group 1 Trading Program that applies to a TR SO₂ Group 1 source or the designated representative of a TR SO₂ Group 1 source shall also apply to the owners and operators of such source and of the TR SO₂ Group 1 units at the source.

(2) Any provision of the TR SO₂ Group 1 Trading Program that applies to a TR SO₂ Group 1 unit or the designated representative of a TR SO₂ Group 1 unit shall also apply to the owners and operators of such unit.

(g) Effect on other authorities.

No provision of the TR SO₂ Group 1 Trading Program or exemption under 40 CFR 97.605 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR SO₂ Group 1 source or TR SO₂ Group 1 unit from compliance with any other provision of the applicable, approved state implementation plan, a federally enforceable permit, or the Clean Air Act.
